DAIRYMAN

Some Problems About Cooling Milk

It has been estimated that losses to New York dairymen during the summer months from milk returned is around \$60,000. a year. In most cases the reason for return is either that it is not sufficiently cooled or that it is sour. In both cases adequate cooling could have prevented this loss. Here are some questions which have been asked at various times by dairymen about this question of milk cooling and which, we hope, will help you prevent losses from returned milk.

Cost of Cooling Milk

Are there any comparative figures given as to the cost of cooling milk with electricity and ice?

The New York State College of Agriculture kept some figures and where electricity cost 4c per kilowatt hour it cost 11.4c per can to cool milk with electricity and 13.7c per can to cool milk with ice. It should be remembered, of course, that the cost of cooling with ice is not all cash cost, a considerable proportion of the cost being represented by labor in harvesting and storing the ice. It requires about .8% of a kilowatt hour of current per can of milk cooled.

Bacteria Multiply Rapidly

How rapidly do bacteria multiply in milk?

The rapidity of multiplication, of course, depends upon the temperature. In one test milk that contained 560 bacteria per cubic centimeter held at a temperature of 85°F contained 4,000 bacteria per cubic centimeter at the end of two hours. On the other hand, where milk is held at a temperature of 50° there is practically no increase in the number of bacteria. In another test, milk that remained sweet for thirty-six hours when held at a temperature of 75° remained sweet 80 hours when held at 55° Fahrenheit and 180 hours when held at 40° Fahrenheit. It is important to remember that all utensils which come in contact with the milk should be thoroughly scalded and dried so they add no bacteria to the milk.

Cool Milk Soon

How quickly should milk be cooled after it is produced?

We might say as quickly as possible, yet for all practical considerations milk that is strained into cans which are then immersed in a tank containing plenty of ice and water, will cool rapidly enough to remain sweet as long as necessary. Our authority for this is the Geneva Experiment Station. After some trials in which they compared milk put in cans and immediately immersed in a cooling tank, with milk precooled by pouring over a surface tubular cooler to reduce the temperature to 50° very quickly, they found there was no increase in the numbers of bacteria in the milk cooled in cans over that cooled by running over the tubular cooler. It seems that freshly drawn milk has a germicidal action, that is it actually stops the growth of bacteria for an hour or two. Put the covers on the cans when they go in the tank.

Advantages of Aerators

Do you advise the use of an aerator for cooling milk?

This question is partially answered in the preceding question. Milk, and in fact all dairy products, absorb odors very easily. However, if milk is produced under favorable conditions there would be no odors for it to absorb, and, therefore, aeration, that is allowing it to drip over a surface cooler, should not be necessary so far as the elimination of odors is concerned. A surface

**Act At Once
If You Want
These Big
Savings
on 1931
Wood Silos!**

Here's a chance to obtain highest quality wood silos at unheard of low prices—at savings of \$40 to \$194.00 to you. We are passing on to you the benefits of a sacrifice purchase of lumber which we made just recently. Remember—every one of these silos is new—right out of stock! No seconds. No cheap stuff. Send, today, for full information regarding this remarkable offer.

These special Wood Silos are reduced to fit 1931 economy conditions. The supply is limited—but rare bargains while they last. ORDER AT ONCE—we'll make deliveries whenever you wish. These silos carry our usual liberal terms, discounts, etc., the same as our regular line.

*We have silos of every type—
Concrete Stave, LeRoy Vitrified
Glazed Tile, Metal or Wood—to
fit every purse or preference and
all exceptionally LOW prices.*

Ever look into a cow's stomach?

Of course not! But if it were possible you would be amazed at what goes on there!

You'd rush to the nearest feed store for Dried Molasses Beet Pulp—the natural vegetable feed resulting from the extraction of sugar from beets—the feed that keeps the cow's stomach in perfect working order. In addition to being a great feed itself it aids the digestion of the other ingredients in the ration.

Dried Molasses Beet Pulp is *bulky, cooling, laxative, palatable*—just the kind of feed every cow needs in her stomach to keep in perfect health. And your cows must be healthy to be profitable. Fits any ration—replaces corn, barley, oats, silage and other carbohydrate feeds. 6 pounds are equal to 10 pounds of hay. Good for all animals—dairy cows, beef cattle and sheep.

Attractive Prices

Present low prices make it more than ever a profitable buy. See your feed dealer without delay. Shipments made direct from factory closest to buyer.

(Continued from Page 8)

cooler will, of course, reduce temperature more quickly, but here again the experiments cited above indicate that this is not essential. Many dairymen use aerators successfully. Where cold water is available it will be economical either of ice or electric current to cool the milk to as low a temperature as can be done on a surface cooler through which cold water is running before putting the cans in the cooling tank.

* * *

Low Temperature Advisable

To what temperature should milk be cooled to insure its keeping qualities?

Many dairy companies require that the night's milk be not higher than 50 degrees in temperature when delivered to the plant. Tests have shown that milk which does not have high bacteria counts immediately after it is produced will keep for long periods at 50 degrees Fahrenheit. The lower the temperature is, the longer it will keep, although, of course, it should not be allowed to freeze. Fifty degrees is usually considered a satisfactory temperature.

* * *

Size of Tank

How should we figure the proper size of cooling tank for a dairy?

One authority says that the tank should contain three times as much water as the milk which is to be cooled in it. Getting this down a little more definitely, another authority says that you should allow four inches of space between each can and between the cans and the walls. This will mean that a tank should be twenty-two inches wide for a single row of cans or forty inches wide for a double row of cans. It should be deep enough so that water comes up well on the neck of the can.

* * *

Partitions Desirable

Are one or more partitions advisable in a milk cooling tank?

If you are producing about the same amount of milk the year round the partition is not desirable. However, if there is a big variation at different seasons of the year, the partition will enable you to use only a part of the tank during part of the year. This will be economical of ice or electric current.

* * *

Insulation Helps

Do you advise the construction of an insulated tank?

In a certain sense an insulated tank is more necessary where an electric cooler is used because it allows milk to be cooled with less current. Of course, in an insulated tank it is also economical of ice, but here a smaller percentage of the cost is a cash cost. If you are building a milk house we advise building an insulated tank and also that you build it large enough to install an electric unit if you later want to do so. The Department of Agricultural Engineering of the New York State College of Agriculture has extension bulletin number 101 on how to build an insulated concrete milk cooling tank, which will be sent on request. This bulletin gives very careful details on how to construct the tank.

* * *

Break the Ice Up

Where ice is used to cool milk should space be left at the end of the tank so that one big cake can be put in or should it be broken into smaller pieces?

Of course, the ice will melt less rapidly where it is in one big chunk and sometimes dairymen feel that this is being economical of ice. This is the wrong idea as, of course, the only way the milk can be cooled is for the ice to melt. It will melt quicker, and therefore cool the milk faster, if you will break it up into relatively small pieces.

* * *

Electric Coolers

About what does an electric milk cooler cost?

There will be some variation, of course, but the usual installation cost given is \$100 for each can of milk capacity.

Don't let the depreciation hog

get his snout in your profit pail

Depreciation can be a real profit-eater if we're not careful. An implement that lasts only four years, when it should last six, adds exactly a *third* more to your yearly depreciation costs.

Extra profits come from adding an extra year to the life of each one of your implements. Any farm authority will tell you

that this depends upon proper care and careful lubrication.

Haphazard lubrication with just any oil and grease won't do the job. You've got to keep after it regularly, day after day. Most important of all, bear in mind that only the finest of greases and oils can kick the depreciation hog out of your profit pail.

Your toughest job of the year is the long grind of plowing, disking and harrowing. Here is a real opportunity to help cut depreciation costs in your tractor with Mobiloil. Mobiloil *stands up* under this heavy, daily grind. It gives full protection to bearings, pistons, cylinder walls and transmission gears. Add to this, regular application of Mobilgrease on pressure fittings and make doubly sure of cutting depreciation costs.

Watch the sickle-bar and pitman-pin on your mower. Here you get rapid motion and considerable friction. You can't afford faulty lubrication. Repair costs and depreciation costs are sure to run high. For pressure fittings use Mobilgrease. It won't throw off. You get full bearing protection. Use Voco Wheel Bearing Grease in all grease cups. For hand oil can lubrication use Mobiloil "CW" freely.

If you operate a combine, start now to prepare it for the new season. Don't wait until just before you use it. Get your repair parts now. Clean off the mud, dust and old lubricants. Take your time and do a good job. When combining season arrives, remember that Mobilgrease, the grease that sticks, will greatly reduce power losses and bearing wear.

Cultipackers, Disc Harrows and Rotary Hoes nearly always operate under bad dirt conditions. You need to use Mobilgrease only sparingly. A thin film of Mobilgrease gives complete lubrication. You'll find that it reduces bearing wear, which means reduced depreciation costs.

Mobiloil stands up

Because it is Made — Not Found

VACUUM OIL COMPANY

DAIRYLEA

Dried Skim Milk

A Quality Product

For Poultry, Calves, Pigs

DAIRYLEA Dried Skim Milk in poultry rations, insures growth and health. Strongly recommended by feeding authorities. The ideal food for growing chicks. Increases egg production and improves hatchability in layers and breeders. Also excellent for calves and pigs.

Manufactured in plants of the Dairymen's League Cooperative Association, Inc. from the same high quality milk that is approved for New York City. Guaranteed by years of careful laboratory analysis and experiment.

Carried by local feed dealers and feed stores. If there is no representative in your town, order direct from New York office.

Milk Prices

May Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk (Metropolitan area)	2.90	2.70
2 Fluid Cream	1.66	
2B Cond. Milk	1.91	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.50	1.30
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for May 1930 was \$3.00 for 3.5% milk and Sheffield's \$2.80 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

March Prices Announced

The Dairymen's League announces the following prices for March for 3½% milk:

Gross	\$1.90
Expenses	.06
Net Pool	1.84
Certificates of indebtedness	.10
Net cash prices to farmers	1.74

The Sheffield producers announce the cash price to producers for 3% milk in the 201 to 210 mile zone as \$1.85 per hundred (\$2.05 for 3½% milk.)

"Butter Specials" Help Market

CREAMERY SALTED	May 2, 1931	April 24, 1931	May 3, 1930
Higher than extra	25	25½-26	37¼-37¾
Extra (92 sc.)	24½	25	36¾
84-91 score	22	24¼-24½	32½-36¼
Lower Grades	20	21½-22	31-32

It appears to be very evident that the butter specials being featured by the chain stores are having the desired effect, namely, of moving a large quantity of butter. Although the price has not improved along with the increased demand, nevertheless the move was partially beneficial for it has kept the market well cleaned up. Arrivals have cleared promptly. Trade has been on the hop, leaving the market in good shape. This is well for every day brings us nearer to that period when supplies will run ahead of demand. Word comes that production in all dairy sections is gradually increasing. The season in general appears to be about two weeks early. Already grass flavor is very pronounced and high color is causing some trouble. Certain buyers are paying a premium for light colored stock. So far, none of this make has gone into the storage for a long hold. As yet, no basis has been established on which the surplus will be stored. The financial situation is going to have a strong bearing this year on the storage deal.

Cheese Market Unchanged

STATE FLATS	May 2, 1931	April 24, 1931	May 3, 1930
Fresh Fancy	13	13-15	19
Fresh Average			
Held Fancy	21-22½	21-22½	24-26
Held Average			23-

There is practically no activity to report in the cheese market. Wisconsin appears to be somewhat steadier on fresh makes than the East, where comparatively light stocks are changing hands. The cured cheese market has been fairly satisfactory.

On May 1, the ten cities making daily reports had in cold storage 10,686,000 pounds of cheese compared with 11,099,000 pounds on the same day a year ago. From April 24 to May 1, this year, the ten cities increased their holdings 92,000 pounds whereas during the same period last year they reduced their holdings 288,000 pounds.

Egg Receipts Heavy

NEARBY WHITE	May 2, 1931	April 24, 1931	May 3, 1930
Hennery	22	23½-22	29-31
Selected Extras	21	21½-20½-21	27½-28
Average Extras	20	20½-20	26¾-27
Extra Firsts	19½	19	26
Firsts	19	18½	25½
Undergrades	19	18½	25½
Pullets			
Pewees			
NEARBY BROWNS			
Hennery	21	23½-22	23½-28
Gathered	18	20½-18½-21½	25½-27½

The New York market has experienced another week of unusually heavy receipts, the volume being so great as to be a surprise even to men in the trade. In view of the fact that the distributing trade has not been satisfactory, it appears that there can be some consolation derived by producers when we consider the fact that prices have held.

Government reports indicate less poultry on the farms than a year ago, a lighter production of eggs and a considerably smaller hatch in commercial hatcheries. Reports state that the farm hatch is heavier than a year ago. In view of the fact that last year's commercial hatch

Reviewing the Markets

was abnormally heavy, the 1931 hatch may not be as sub-normal as comparisons with last year would indicate. Furthermore, the smaller demands from commercial hatcheries are believed to be throwing more eggs on the market. Other factors are the diminished activity in the "breaker" market and smaller consumption in the country.

Recently there has been more activity in the export market. During the last couple of days of April and the first two days of May, exporters were heavy buyers.

The financial market has been a very detrimental influence of late, egg storers experiencing difficulty getting money to finance the storage input. The money market is making speculators very conservative.

On May 2, the ten cities making daily reports had in cold storage 2,858,000 cases compared with 3,012,000 cases on the same day a year ago. From April 25 to May 2 the storage input totaled 408,000 cases whereas during the same period last year the into-storage movement totaled 513,000 cases.

Live Poultry Market Off

	May 2, 1931	April 24, 1931	May 3, 1930
FOWLS			
Colored	20-23	22-25	24-26
Leghorn	-21	23-25	26-27
CHICKENS			
Colored			
Leghorn			
BROILERS			
Colored	25-41	25-41	25-41
Leghorn	22-35	25-35	25-34
OLD ROOSTERS	-14	-14	12-13
CAPONS	40-45	-35	40-45
TURKEYS	20-35	20-35	20-30
DUCKS, Nearby	22-24	22-25	19-23
GESE	12-13	-12	16-17

The week ending May 2 was another one of disappointments in the live poultry trade. Lack of buying on the part of the consuming public was the principal factor responsible for the situation. It appeared to be one of those weeks when everybody turns to something else. The supply of live poultry has not been over-heavy, in fact light. But in spite of this, many cars in the freight market had to be sacrificed in order to move them.

Pea Beans Slightly Firmer

Spring "or something" hit the bean market, for on the first day of May pea beans showed a slightly firmer position. It was the first time that the word "firmer" could be used in the market for a long time. Quotations in pea beans range from \$4.50 to \$5.15. Jumbo Marrows are still \$4.75 to \$5.50 with Average Marrows at \$3.75 to \$4.50. Red Kidneys \$8 to \$8.50, White Kidneys \$5.75 to \$6.50.

Hay Market Unchanged

There is practically no change in the hay market since last week. Receipts of hay have been extremely light at most of the terminals. This was fortunate for trade has been very slow with the exception of the first two days of May when demand improved. Receivers were satisfied to accept existing prices in order to keep the trade coming. Timothy still ranges from \$21 to \$26, clover mixtures from \$20 to \$25 and grass mixtures from \$19 to \$23. Wheat straw brings \$13, oat \$13 to \$14 with rye \$19 to \$20.

Four Horseshoes -I- Two Pegs=Fun

(Continued from Page 5)

be accepted from any county without the approval or certification of the County Agent of that county.

5. All county Farm Bureaus must certify to American Agriculturist the names of those candidates who will enter. We should have an early report of the counties that will compete and then a report of the actual candidate as soon as his name is obtained by the county.

6. Contestants must report at the American Agriculturist headquarters at least one hour before the contest starts so that the schedule can be arranged. The New York State Fair will be held September 6 to 12, and the horseshoe pitching tournament will start on Tuesday, September 7, at 11 A. M.

7. This contest is for amateurs only. An amateur for these tournaments is defined as one who has not won any prize money in any national or state tournament, and no entry will be received from the winner of the first prize money at the American Agriculturist state tournaments.

8. The games will consist of twenty-five points, but the tournament committee reserves the privilege of using some kind of an elimination contest if it becomes necessary on account of a too large number of entries.

9. The method of giving prizes has been arranged so every contestant will have a chance at the prize money. Seven cash prizes will be given by the State Fair management to the winners as follows: first, \$50; second, \$40; third, \$30; fourth, \$20; fifth, \$10; sixth, \$5; and seventh, \$5. In addition, the winner of the first prize will also be given a beautiful and appropriate medal.

Farm News from New York

Governor Roosevelt Signs St. Lawrence Power Bill---Indemnity Checks Going Out

THE Cornaire Bill which creates a Power Authority for the development of the water power resources of the St. Lawrence was signed by Governor Franklin D. Roosevelt last week. No comment or memorandum was made on this bill, which was almost the last of the 30-day measures under consideration. This bill definitely declares the policy of the State of New York with reference to the future use of the St. Lawrence River both for the protection and development of water power resources and for the improvement of commerce and navigation. To carry out this work a Power Authority consisting of five trustees will be appointed by the Governor with the advice and consent of the Senate. An appropriation of \$300,000 is carried with the bill.

The trustees for the project are yet to be named, as the Legislature was not allowed to write in the names of the committee. This water power bill has been a bone of contention for some time and it is hoped that the present bill will solve the problem.

The project of power development of the St. Lawrence will be financed through bonds issued by the Power Authority, which is also authorized to enter into contracts with the private utilities who will market the power.

Indemnity Checks Going Out

WE have had a number of inquiries as to when indemnities for tubercular cattle tested and condemned last fall in New York State were to be paid. The indemnity money appropriated by the Legislature for 1930 was used before indemnities had fully been paid. An emergency appropriation was recently passed by the State Legislature and in anticipation of favorable action by the Governor, Commissioner Pyrke of the State Department of Agriculture and Markets, had the schedule of claims ready and these claims have already been forwarded to the Comptroller. The Commissioner reports that the Comptroller's office is showing a fine spirit of cooperation and that the checks in payment of these indemnities will doubtless go out the week ending May 2.

Dean Mann Heads Hoover Committee

NEW YORK State has been honored by the selection of Dean A. R. Mann, of the New York State College of Agriculture, and Martha Van Rensselaer, director of the College of Home Economics, as chairman on President Hoover's committees on Home Building and Home Ownership and of Home Making respectively.

The committee which Dean Mann will head is concerned with the aspects of rural and village housing as related to costs, construction and remodeling, individual development, taxes, financing, social development, and related questions. Bruce L. Melvin, formerly assistant professor in rural social organization at Cornell will also be on Dean Mann's committee as research secretary.

National Cooperative May Be Ready by Fall

WE have made mention several times of the new farm board marketing agency for fruits and vegetables. The latest report from the Committee in charge of operations is that the co-operative will not handle vegetables for the early summer crop but possibly may be ready for operation in the fall. A committee has been working on the various organization problems confronting the new co-operative and the general opinion seems to be that there should be a general marketing service for selling to the wholesale trade of the country through salaried representatives in the larger markets and

through resident brokers in the smaller markets.

Estimates as to the capital required for the new agency have run as high as one million dollars.

New Oleo Law Soon in Operation

IN connection with the recent amendment prohibiting the sale of colored oleomargarine which was sponsored by dairymen in the New York Milk Shed and elsewhere, announcement has been made that inspectors will check up on the sale of this product beginning July 1. Retail and wholesale groceries are cautioned against stocking up with more of this commodity, having a yellow color, than can be disposed of by that time. The amendment as passed provides that only a very slight tinge of yellow will prohibit the sale of oleomargarine and any oleomargarine used in restaurants must be plainly marked on the bill of fare. This piece of legislation is of real service to the dairymen not only in New York, but in the country as a whole.

TB Test Progresses

A NEW high mark in the official testing of cattle for tuberculosis was reached in March, when 1,325,912 tuberculin tests were made by Federal, State and County veterinarians working co-operatively. Evidently the demand for tuberculin in testing work is still increasing especially in the highly infected districts. Additional state funds for indemnity have recently been provided in some eastern states and it is expected that an even greater number will be tested the coming year.

New York 4-H Club Congress

THE New York State 4-H club congress will be held at Cornell University on June 29 to July 2. This year the program has been lengthened to four days and the attendance has been

limited to two and one half per cent of each county's enrollment. Tours of the campus, morning gatherings in charge of the state 4-H council, judging, singing, radio programs, and addresses are included in the program that is intended to make these four days a real field day for the junior club members. Boys and girls will be accommodated at the University dormitories and meals will be served at the cafeteria.

Dairy Science Meeting

THE American Dairy Science Association will hold its annual meeting this year on the Pacific coast starting the first week in July. A formal program will be presented on July 14 and 15 at the College of Agriculture, University of California, at Davis, while a great deal of the rest of the time will be taken up in tours of the surrounding states to see the physical evidence of the progress that has taken place in the development of the dairy industry in recent years.

Dr. Warren Predicts

D. R. G. F. WARREN, in the latest issue of *Farm Economics* says: "There are a few indications that the bottom of the business depression has been reached, but no clear indication of improvement has yet arrived. Of course every month of continued low production decreases the supply of products and the wealth of the country. Sooner or later a shortage of products will cause some rise in prices and improve business conditions."

Game Protectors Learn to Shoot

GAME protectors under the direction of Captain C. J. Broadfield of the State Police, are learning how to use the pistol with which they are armed. In the past many game protectors have looked upon their guns as more or less as an ornament and there were few indeed that were expert in its use. The

New York County Notes

Cattaraugus County—Word had been received at the Farm and Home Bureau office of the safe arrival of the three cars of food stuffs sent to Kentucky, Tennessee and Virginia on April 4 respectively. There were no losses from broken eggs or canned goods. Supplies were given out through the Red Cross there. A letter received from a 71 year old lady there said the goods were a God-send as many who applied for aid stated they were without food or clothing. Her letter concluded that she felt sure the Lord would shower his choicest blessings on Cattaraugus County for its timely assistance.

All available stacked and loose hay has been bought and fed to the stock and many farmers are having to turn to the baled product to get cattle through to pasturage.

R. F. Lewis spoke to several hundred farmers at the April meeting of the County Dairymen's League Association held in Cattaraugus on the 25th. An educational campaign was presented to show how to avoid the present surplus and consequent low prices by not having cows freshen next February and March. There was an increase of nearly 50 per cent production by each member during the past two months with no increased demand due to the continued unemployment, the speaker said.

Dirt road farmers were saved much inconvenience and trouble this April by lack of April showers and consequent mud and ruts.—M. M. S.

Steuben County—Merle Tadder has finished sawing around 40,000 feet of lumber, and has done good work. The season is cold with some rain. No oats sown yet up here. There are many vacant farms. Nothing more has been

done about gas drilling. Plowing not all done.—D. C. F.

Cortland County—Conservation is holding an important place in the affairs of Cortland county. The 4-H project of planting 5,000 trees on the Currie tract in Preble began April 25. A shipment of 35,000 trees from Horseheads is due this week.

John Mc Dermott, popular old-time fiddler and president of the County Sportsman's club, is visiting rural schools, giving talks to the school children on this important subject and presenting each pupil with a five year old pine tree for planting.—J. B.

Washington County—Not much demand for wool, many of the farmers have their sheep shorn. A meeting of poultry raisers was held in the Coila School house Wednesday evening. Professor Holder, of the state school of agriculture addressed the meeting.

Eggs are selling for 20 or 25 cents a dozen.—H. H. C.

Wyoming County—Assemblyman Joe Hanley, of Wyoming county addressed the Warsaw grange on April 28 with his very significant talk on "Pay Dirt."

The Attica Grange recently celebrated its twenty-fifth birthday. Over 180 visitors were present to enjoy the fine program, a special feature of which was the huge birthday cake with 25 tall candles.

The Farm Bureau, Home Bureau and 4-H clubs are sponsoring a rural school ground beautification contest in this county for which prizes amounting to \$30 will be offered by the Wyoming County Bankers Association. The best county plans will be submitted to the state contest where prizes of \$60, \$40, \$20, and \$10 will be given.—A. L. S.

Conservation Department is determined that all game protectors should learn how to shoot quickly and accurately and the men under Captain Broadfield are progressing rapidly.

Poultry Judging School

ANNOUNCEMENT is made of the fourteenth annual Poultry Judging and Breeding School, to be held at Cornell University June 22nd to 27th, 1931. The primary object of this School is to teach the principles of judging poultry for production, a knowledge of which is especially important during the present critical period of the poultry industry.

Western New York Notes

DRILLING for natural gas in Chautauqua County will be pushed with renewed vigor the coming season. Chief interest is centered in the Stone and Ashville field which is a new lease not far from the Pennsylvania gas fields.

Home Bureau units are active, many meetings being held and much interest manifested in the various subjects under consideration. At an informal display of garments made by women of the Erie county Home Bureau, a group of Indian women from the Cattaraugus reservation entertained by picturing the Indian of frontier days and the Indian of today.

April's long spell of dry weather was becoming serious before rain finally came. Forest fires destroyed timber in Allegany, Cattaraugus, and Steuben counties and threatened Allegany state park.

Streams and wells were beginning to diminish and soil was getting too dry for fitting. Heavy rain has started and on this date, April 27, we are getting a northwest gale with snow.

Haymows are pretty well depleted. New meadows in general are poor and many will have to be re-seeded. Pastures are backward due to the dry weather. Plowing is nearly finished and some early potatoes are planted, but oats are not all in yet.

No improvement in the price of farm produce. Farm labor by the month about \$40 to \$45.

A.A. On the Radio

WEAF—Each week day from 12:00 to 12:15 P. M., E. S. T. the New York State Department of Agriculture and Markets, cooperating with American Agriculturist, broadcasts market reports.

WGY—On Tuesdays during noon programs, usually at 12:40 P. M., E. S. T., Radio Station WGY broadcasts each week Eastern Farm News prepared by the Editorial Staff of A. A.

On Thursday at 12:40 P. M., E. S. T., an editorial under the heading: "Editor Ed Looks at Life", prepared by Mr. Eastman, is broadcast.

1:00 P. M., E. S. T., a news item of interest to all agriculture, but which particularly concerns New York State agriculture, and which is prepared by the Editorial Staff of A. A., is broadcast.

WHAM—On Mondays, Wednesdays, and Fridays, Western New York News items prepared by Walter Hoose, Assistant Editor, are broadcast.

On Mondays and Saturdays an editorial is given, prepared by E. R. Eastman.

On Wednesdays a talk of particular interest to farm housewives is given by Aunt Janet of A. A.

IN the twenty-fifth week of the Storrs contest the birds eased up just a trifle though they are still going at top speed. The let-up was only 102 eggs and even at that they laid 69 more than they did in the corresponding week a year ago.

The total yield for all pens was 5,351 eggs or a yield of 76.4 per cent. Three classes, namely Australorps and Giants, Barred Rocks, and White Leghorns all did 80 per cent or over.

Just paint the roosts with "Black Leaf 40." The heat from the birds' bodies releases the fumes, which kill lice.

NO HANDLING OF BIRDS
Recommended by Colleges and Experiment stations everywhere. Ask your dealer. If he does not have it, send us \$1.00 for 100 bird size.

REDWING STOPS CANNIBALISM

Give the Chicks More Room

A MAN who can make two blades of grass grow where one grew before is said to be a good farmer. But anyone who attempts to grow two chicks where there is room for only one is courting disaster. And he is not a good poultryman.

L. E. Weaver

If I were to arrange in the order of their importance the chief causes for failure to produce vigorous healthy pullets the list would start off like this. Number one, unsanitary conditions; number two, overcrowding in the brooder house and on the range; number three, improper feeding.

Of course, that order may be changed around in some cases, but I am very certain that as a general trend it is not far wrong.

Perhaps someone will say that feeding the right things or feeding in the right way is most important and should be put in first place. But I believe that feeding has been studied so much and talked about so much that the principles of good feeding are very generally understood and followed. Few indeed in these days are the flocks that have to get along as best they can without any mash. Milk in some form or other is fed very commonly. And nearly all early and indoor chicks get their cod liver oil.

But in spite of all the talking and writing about the evils of overcrowding people will still insist on taking a chance and crowding their brooder houses to the limit at the very start. Then a week later the chicks have grown so that they are already crowded. This condition gets rapidly worse as the weeks go by. Often the chicks begin dying off and of course that helps matters some for the survivors. But is it not a more sensible plan to start out with fewer chicks and not have to take that loss?

How Overcrowding Harms the Chicks

The greatest damage comes from the increased difficulty in keeping the house and range sanitary. As long as the premises can be kept dry there is comparatively little danger from disease. Germs thrive in damp and warm places but are usually inactive in dry conditions. It is therefore an important matter to keep the litter dry, and this is not a difficult thing to do if only a reasonable number of chicks are present. The moisture from the droppings is soon absorbed or evaporated. With more chicks there is bound to be more droppings and more moisture. Soon the moisture accumulates faster than it can be dried out, the litter becomes saturated, and bacteria can grow by the billions.

Another trouble with having too many chicks in a room is that there is not room left on the floor to put in enough feeders to take care of them all. So they stand around and wait for each other, or more likely they dive in and start a fight for a place at the feeder. There is usually more toe-picking and feather-pulling in overcrowded flocks. Of course the smaller and weaker chicks are kept away from the feed entirely. The fittest of the chicks are probably the ones that survive. That is one way to cull the flock, but no one would maintain that it is by any means the best way.

Still another evil that comes from giving the chicks too little space shows up when they are about half-grown. They have outgrown the roosting space and at night they are packed together like sardines in a box. On hot nights the place becomes stifling and almost unbearable. To be able to spread their wings a bit would be somewhat of a relief, but there is not a chance in the world. Surely such conditions do not make for rapid vigorous growth.

How Many Chicks?

What then is the correct number of chicks for a house? How many is too many? A good rule is, not more than three chicks to each square foot of floor space, and then take out the males as soon as they can be told from the pullets. For instance, in a brooder house ten feet square there are one hundred square feet of floorspace. We could start 300 chicks in such a room but never more than that. Some people always want to put 500 or perhaps even more than that in one flock. That can be done though I could not advise it. You will find that as a rule the finest

(Continued on Page 18)

Danger of Infection Among Baby Chicks

Success in raising baby chicks is dependent upon proper care and management. Readers are warned to exercise every sanitary precaution and beware of contaminated drinking water. Baby chicks must have a generous supply of pure water. Drinking vessels harbour germs and ordinary drinking water often becomes contaminated and may spread disease through your entire flock and cause the loss of half or two-thirds your hatch before you are aware. Don't wait until you lose half your chicks. Take the "stitch in time that saves nine." Remember that in every hatch there is the danger of some infected chicks—danger of diarrhea in some form and other loose bowel and intestinal troubles. Don't let a few chicks infect your entire flock. Give Walko Tablets in all drinking water for the first two weeks and you won't lose one chick where you lost dozens before. These letters prove it:

Mrs. Bradshaw's Remarkable Success in Raising Baby Chicks

"Dear Sir: I see reports of so many losing their little chicks, so thought I would tell my experience. I used to lose a great many of the little downy fellows from bowel troubles, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 420, Waterloo, Iowa, for their Walko Tablets for use in the drinking water of baby chicks. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after using the Tablets and my chickens are larger and healthier than ever before. I have found this Company thoroughly reliable and always get the remedy by return mail." —Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens. I tried different remedies and was about discouraged with the chicken business. Finally I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko Tablets to be used in the drinking water for baby chicks. It's just the only thing to keep the chicks free from disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko Tablets entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is when used in the drinking water for baby chicks. So you can prove—as thousands have proven—that it will reduce your losses and double, treble, even quadruple your profits. Send 50c for a package of Walko Tablets (or \$1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Walko Tablets are sold by leading druggists and poultry supply dealers.

your cake fail? not a chance! says Calumet's Double-Action

So delicious! So sure to be perfect—with Calumet!

● ARE YOU ONE OF THOSE WOMEN who delight in serving home-made cake—but always hesitate to make it, for fear of failure? Then try Calumet, The Double-Acting Baking Powder—and forget your worries. Even if you're new at this baking game, you'll have marvelous "luck!"

It's Calumet's Double-Action that causes that "luck." Two actions instead of one. Two actions that protect your baking and make it come out perfectly—wispy-light and smooth, delicious—even though you may not be able to regulate your oven temperature accurately.

Calumet's first action begins in the mixing bowl. It starts the leavening. Then, in the oven, the second action begins and continues the leavening. Up! . . . up! . . . it keeps raising the

batter and holds it high and light. Cakes, biscuits, all bake beautifully.

All baking powders are required by law to be made of pure, wholesome ingredients. But not all are alike in their action nor in the amount that should be used. And not all will give you equally fine results in your baking. Calumet is scientifically made of exactly the right ingredients, in exactly the right proportions to produce perfect leavening action—Double-Action.

Try Calumet! See why Calumet is to-day the most popular baking powder in the world! . . . Use only *one* level teaspoon of Calumet to each cup of sifted flour. This is the usual Calumet proportion and should be followed for best results—a splendid economy! Calumet is a product of General Foods Corporation.

© 1931, G. F. CORP.

LOOK! . . . SEE CALUMET'S DOUBLE-ACTION!

Make this test—See for yourself how Calumet Baking Powder acts *twice* to make your baking better. Put two level teaspoons of Calumet into a glass, add two teaspoons of water, stir rapidly five times and remove the spoon. The tiny, fine bubbles will rise slowly, half filling the glass. This is Calumet's *first* action—the action that Calumet specially provides to take place in the mixing bowl.

After the mixture has entirely stopped rising, stand the glass in a pan of *hot* water on the stove. In a moment, a second rising will start and continue until the mixture reaches the top of the glass. This is Calumet's *second* action—the action that Calumet holds in reserve to take place in the heat of your oven. Make this test to-day. See Calumet's *Double-Action* which protects your baking from failure.

Rock Garden Hints

Reader Wants to Know How to Make One

By MRS. G. W. HUCKETT,
Household Editor, American Agriculturist

I wish more information about making a rock garden; how they should be arranged and what should be planted in them.

FIRST of all, the setting should be a natural one, such as a slope or a rough sort of place. A pile of rocks on a smooth lawn is out of place and, furthermore, is very difficult to plant satisfactorily. A sloping terrace offers

Mrs. G. W. Hockett

a natural background for rocks which can be slipped into the soil leaving rough pockets deep enough to furnish subsistence for the plants. These rocks should be placed in a rather natural looking manner but it is important to have adequate room for the roots of the plant. If the rocks are slightly tilted to catch as

much rainfall as possible, it will be a distinct advantage to the plants growing in the shelf-like ledge.

The plants most in favor for rock gardens are of the alpine variety. Some of these may prove somewhat expensive

a garden. The native bittersweet vine would help to cover many an unsightly spot. Other wild plants which may work well into the rock gardens are for shady places—columbines, wake robins, fox-gloves, violets, and ferns. Any wild plant which is planted should be set in the same relative position from which it was obtained if one expects to get the best possible results. For sunny places, moss pink, wild geranium or starry grasswort can be used.

Pachysandra is a very popular ground cover plant sold by nurseries. I noticed a great deal of it used in the Flower Show and see it widely advertised for that purpose.

Butter Balls

Cut a loaf of white or whole wheat bread into chunks or thick slices and soak in cold water. Half white and half whole wheat is a good mixture. Press the water out but do not squeeze the bread and make it pasty. Have ready two eggs beaten with one pint of milk. Add the seasoning of salt and pepper and poultry seasoning, or finely minced onion or celery to the eggs and milk. Lightly mix in the bread adding one cup of melted butter. Form into balls and crowd rather closely like biscuits into a dripping pan. If you have a glass baking dish they can be baked and served in that. Have the neck, giblets and ribs of the chicken cooking and from time to time baste the balls with the broth. Do not make them sopping but rather have them crisp on top and soft in the middle. The meat of the giblets can be chopped fine and spread over the balls at the last. Serve with stewed chicken and gravy, or with any kind of roast meat and gravy.—H. R.

Air and shake furs before storing them for the summer. Also brush the fur the wrong way and examine the hide for tiny white specks.

SCARF NO. B-1538 comes stamped for cross-stitch embroidery on good quality oyster linen with "rainbow" border and 1½" thread-drawn hemstitched hem at either end. The colors woven in to form the rainbow effect are maize, green and blue. Color chart and instructions included, but no floss. Price, 65 cents. Order from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, New York.

but there are many varieties of the old favorite perennials which are very satisfactory. Suitable perennials are:

Alyssum saxatile, Anemone Hupehensis, Ajuga reptans Aquilegia alpina, Arabis alpina, Arenaria montana, Aster alpinus, Bellis, Campanula carpatia and rotundifolia, Cerastium tomentosum, Dianthus, Erigeron, Geum, Helianthemum, Heuchera, Iberis sempervirens, Iberis cristata and pumila, Iris, Iceland and alpine poppies, Lavender, Lychnis viscaria, Lysimachia Nummularia, Mertensia virginica, Myosotis, Pachysandra, Phlox subulata, Physostegia, vivid, Primrose, Saponaria, Sedums, Spirea filipendula, Scutellaria, Stokesia, Thyme, Tunica, Vinca Minor, Viola.

Dwarf annuals may also be used. Here are some good ones:

Ageratum, Phlox Drummondii, Verbenas, Portulaca, Dwarf Calliopsis, Dwarf Marigold, Alyssum, Dwarf Zinnias, Petunias, Pansies, Lobelia, Eschscholtzia.

Bulbs, both the spring planted and the fall planted, are well suited for rock garden use.

The same rules hold for arranging these plants as for other borders or beds. If a background is needed, the tall shrubs grow towards the back, the low growing plants toward the front. The low spreading plants are scattered about to cover the usually rough surface which characterizes a true rock garden.

If you have a swampy place, sweet fern, wild roses, or silky dogwood can be used. If the garden is shady, wood azaleas, blueberry bushes and the maple-leaved viburnum would be excellent. It is often possible to get suitable evergreens or flowering shrubs from your own woods, using evergreens such as white, red, or pitch pine for dryer spots, hemlock for moist. The oaks, flowering dogwood or thorns may be very picturesque also. Cedars and ground hemlock are also useful in such

Rose design cutwork set No. C3252 offers a choice of lovely articles for dining-room or bedroom. The lesson chart furnished with each article tells where to use the stitches required, buttonhole, satin stitch and outline. Pillow cases are stamped on extra fine grade linen finish, white tubing, size 42 x 36 or 45 x 36 and all other items come stamped on splendid quality cream oyster linen. Prices are postpaid as follows: Vanity dresser set is 45c; scarf, size 18 x 36, is 65c; scarf, size 18 x 45, is 80c; scarf, size 18 x 54, is 90c; buffet set, three pieces, is 85c; center, 36 inch round, is \$1.10; oblong, size 36 x 48, is \$1.85; napkins, set of four is 70c; set of six is \$1.00; set of eight is \$1.35; set of twelve is \$1.75; pillow cases, size 42 x 36, are \$1.55; size 45 x 36 are \$1.65 each pair. If floss for embroidering is wanted, we can furnish white six strand embroidery floss for 40c for a dozen skeins or perle cotton, 60 yard balls, at 15c for each ball.

Order from Embroidery Dept., American Agriculturist, 10 N. Cherry Street, Poughkeepsie, New York.

Aunt Janet's Corner

The "Old Man" Needs a Place to Write

SOMETIMES we women fall into the error of thinking that the home is scaled only to the wants of the men in the family. This may be pretty nearly true as far as food selection goes, for in many cases we find the whole family eating what Father likes rather than the well balanced diet that naturally should be the choice. This little incident—a true one—serves to prove that in other phases of home life the man may not be so lucky.

Yesterday I heard this story. A busy business man called up a farmer and said, "Joe, I wrote you a letter about a month ago and I haven't had any reply. Why on earth don't you write to me?"

The farmer replied, "Well, to tell the truth, there isn't any place around our house where I can find room to write a letter."

It may be that other members of that farmer's family could justly make that same statement, but the point is that the one that had to say it was the farmer himself. This is not the only case where the man's needs have been slow to receive attention.

I am talking partly to myself when

I say this, because I am occasionally reminded that a den would be a very welcome addition to our own household arrangements. Whether or not the den is the solution for every family, there is a distinct demand for some convenient place for answering correspondence, checking up accounts, and the like. A table with top unencumbered, with drawer space for writing materials, and with sufficient light, no matter if it is only a kitchen table would serve the convenience of many

Delightfully Youthful

3105

DRESS PATTERN NO. 3105 is a charming model with a lot of style and youthfulness as well. The model shown here is of red and white printed crepe silk but plain crepe, printed chiffon, eyelet batiste or many of the rayon materials would be lovely in this design. The pattern cuts in sizes 14, 16, 18, 20 years, 36 and 38-inches bust measure. Size 16 requires $3\frac{1}{4}$ yards of 39-inch material with $2\frac{1}{2}$ yards of edging. PRICE 15c.

members of the family at various times of the day. A desk with ample drawer space is better, of course.

But my plea this time is for the "old man", that his scant time in the house be made as comfortable and convenient as possible.—AUNT JANET.

Hints for the Thrifty

I HAVE two children who wear fancy cotton hose for school. When the feet are beyond repair, I cut the legs open and make into holders to use around the stove. These are "pretty" and wash so easily one can't have too many. I use a tape sewed on like a letter V. This makes them easy to get off a nail or hook.

We are compelled to use some type of milk strainers only once. We have outing flannel squares. These I wash out each day and pin together and wash thoroughly in the regular wash. These squares make "dandy" patches for children's underwear and to use to wipe off the kitchen table, spots of grease, and the like.—MRS. P. J. M.

The Popular Redingote

3083

DRESS PATTERN NO. 3083 shows one of the most popular styles of this season, the redingote. It is an especially good style for the full figure because of its softly falling rever collar and the fitted hip line which diminishes bulk. The dress is of printed silk crepe while the coat is of a matching color. Wool crepe, shantung, linen, or the novelty rayon materials would lend themselves well to this redingote style. The pattern cuts in sizes 36, 38, 40, 42, 44 and 46-inches bust measure. Size 36 requires $4\frac{1}{2}$ yards of 39-inch material for dress with $3\frac{3}{4}$ yards of 39-inch material for coat. PRICE 15c

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps. Add 12c for one of the new catalogues and address to Pattern Department, American Agriculturist, 10 N. Cherry Street, Poughkeepsie, New York.

HERE WE ARE ... the two of us!

Two what? . . . two helpers! Two brisk, busy helpers combined in a big golden bar. That's Fels-Naptha—not soap alone, but soap and naptha.

Prove it yourself. Unwrap a Fels-Naptha bar. See the good golden soap. Now lift the bar to your nose. Smell the naptha—*plenty of it!* Naptha, the dirt-loosener and soap, the dirt-remover, to tackle your wash side by side. No wonder dirt vanishes so quickly and easily with Fels-Naptha. No wonder your clothes come so sweetly clean—without hard rubbing!

Fels-Naptha is gentle to your hands. It gets them out of water sooner. And every bar contains bland, soothing glycerine. Try Fels-Naptha next wash-

day. In tub or machine. In hot, lukewarm or cool water. For soaking or boiling. Get a few bars at your grocer's today. And take advantage of its *extra* help for household cleaning, too.

Special Offer—We'll be glad to send every user of laundry soap a sample bar of Fels-Naptha and a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use the chipper and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only 4 cents in stamps to help cover postage, and we'll mail you the chipper and sample bar without further cost. Write today. Fels & Company, Phila., Pa. Dept. 1-5-9.

THE GOLDEN BAR WITH THE CLEAN NAPTHA ODOR

Participating Policies On Automobile Insurance Are Popular With New York State Farmers

OUR net premiums last year increased $33\frac{1}{2}\%$ over 1929. Farmers appreciate their opportunity to buy *Automobile Insurance on a profit-sharing basis*. This participating plan appeals to them strongly, probably because so many are members of cooperative organizations.

We allow 10% off "conference manual" rates as outright deduction when premium is paid. This is \$3.00 to \$10.00, depending on make and size of car or truck.

Also 10% additional deduction where policyholder has had no automobile accident during past 24 months.

This is a New York State Company, with Home Office in Buffalo, with Claims Service Branches throughout State, and claims representatives from coast to coast.

**GUARDIAN CASUALTY
COMPANY**

Owen B. Augspurger, President.

HOME OFFICE: BUFFALO, N. Y.

Write for rates and exact savings on your car and truck. Ask for Agency Proposition, if you think you would like to represent the "GUARDIAN." You may be in a good territory which is still open.

The Story Thus Far

Jim Stuart sees a drifting canoe. He and Omar, his Indian guide, start out at considerable risk and rescue the person hanging on to it. They find it is a girl, the daughter of LeBlond, the head of the rival trading post. Omar's wife, Marthe, thoroughly disapproves of the knickers Aurore LeBlond is wearing.

Jim's next trouble is how to get her home. It was impossible to cross the lake; it is miles around and Jim feels that LeBlond will not be pleased to have his daughter stay at his rival's camp. Aurore seems to approve of Jim and there are indications that the approval is mutual.

In the course of the conversation it develops that Paul Paradis has been making disparaging remarks to Aurore about Jim.

During the evening Omar sees lanterns approaching and concludes that it is a searching party. Before Aurore's father appears she and Jim plan a meeting place on an island half way between the two posts.

When LeBlond arrives Paradis tries to make trouble by insinuating that Jim was in no hurry to return his daughter. Aurore refuses to leave until morning and the two men are forced to remain.

* * *

"I really think you about won Sarah over, when you patted her shoulder and put that silk scarf around her neck," he said.

"Poor old soul, she almost burst, didn't she?"

"I know Sarah pretty well," he laughed, "and the way that grin slowly widened across her red face when you gave her the scarf and shook her hand makes me think she's forgiven you your gibodiegwason. Though, of course, she wouldn't admit it."

"She thinks me insane, probably."

"She didn't know what to think."

Then, as they approached the shore, she said, hurriedly: "The split rock on the shore of the last of the islands—look there in a few days; you might find something. Good-bye, Mr. Jeem Stuart." She gave him her hand.

"Good-bye, Miss Gibodiegwason."

When LeBlond stepped into his big freight canoe he said to Stuart: "I thank you again for what you have done. Your people have seen fit to send you here to take the trade from me. Between the North-West and the Hudson's Bay there can be no quarter. But to you, yourself, I owe much. Some day I may be able to repay."

As the factor of Sunset House watched the departing Peterboro nose an ever-widening ripple out across the still lake which now mirrored the hills—for the wind had dropped in the night to a flat calm—a voice at his side roused him from his thoughts.

"We got a beeg job ahead, dis summer."

Stuart looked into the grave face of Omar. "We have, Omar, but I wish I knew where to begin. They heard at Lake Expanse that LeBlond got thirty-thousand dollars worth of fur from Pipestone Lake and the Sturgeon River country alone, this year. We didn't get a pelt—not one hunter from that country!"

"I hear, last night, somet'ing about dat."

"You did? How d'yuh mean—heard?"

By
George Marsh

"De men wid de cano' talk w'ile Le-Blond go to de house for de girl."
"What did they say?"

Jingwak—Medicine Man

"Eet was so dark dey did not know I was dere. De wind blow so hard I hear onlee little. Dey talk about Jingwak."

"Jingwak, the medicine man at Pipestone Lake?"

"Ah-hah, you know how he get all de hunter to trade wid LeBlond—not one come to Sunset House?"

"No, but I'd like to," said the interested Stuart; for never had a dog-team or a canoe from the Pipestone Lake and Sturgeon River country, in the three years of its existence, come to Sunset House to trade. These northern Ojibwas from a rich fur country had avoided the little post as if it harbored the plague.

"Wal—Jingwak tell all dem peopl' dat dis place ees full of devil. I find dis out, for one of dat crew had fear to stay on de beach."

Slowly the blood filled the bronzed face of the man who listened.

"So they are bribing the medicine men, the conjurors, are they, to keep the trade from Sunset House?"

It was clever of LeBlond, for the Pipestone Ojibwas, who came two hundred miles south to trade, were a wild, superstitious lot, easily influenced by a medicine man—a shaman.

"W'at you t'ink of dat?" demanded the half-breed. "I tell you we got good job ahead, dis summer, w'en we get de trade stuff up from Lak' Expanse."

"Omar," we've got to get some of that Pipestone and Sturgeon River trade. We can't live on what we get from the rest of the country. What're we going to do?"

The swart Boisvert rose from his squatting position. He was not tall, but his Scotch and French blood had united with the Ojibwa to create a rare example of nature's skill in the building of human thew and muscle; for in his compact one-hundred-and-eighty pounds Omar carried power and stamina which had been a by-word among the voyageurs of western Kiwedin. Deliberately reaching to the rear, the half-breed drew his skinning knife and, lifting a foot, stropped the blade slowly on his moccasin. "Dere ees one t'ing we can do wid M'sieu' Jingwak," he said, significantly.

"You old walf," laughed Stuart, "I believe, if I said the word, you'd hunt him down this summer and stick that in him."

Because of his devotion to the elder Stuart, and to the son lately returned from the war across the big water, Omar had, three years before, left the God's Lake country to follow Jim's fortunes on the upper Albany, and his small eyes met his chief's cryptically as he said: "Dere are manee way to kech a fox."

"Yes, and we must find one to beat this Jingwak; but we can't hurt him you know. There are laws in this country."

"Law? Umph!" grunted Omar. Then his broad face puckered into a network of wrinkles as his wide mouth stretched in a stiff smile and the small eyes snapped. "All right! I go see dis Jingwak an' tell him he mak' beeg mistake; dere ees no devil here."

"Meaning that you're crazy to get those bear paws of yours on his neck

and shake the teeth out of him."

"Wal, we got do somet'ing ver' queek!"

"We have, Omar," admitted Stuart. "If I'm licked here, I might as well look for a new job. The Company'll never forgive me. Christie knows what the job is here, but he's not satisfied with the small trade this year."

With an impulsive movement Boisvert grasped the hand of the younger man. "We not tru yet! Dis summer we go to Pipestone Lake."

* * *

CHAPTER IV

TWO days later, with the freight boats from Lake Expanse which carried the next year's supplies and trade goods for the little post and had been wind-bound at the head of the lake, came Esau Otchig, whose shoulders had rounded and lean face creased with furrows in the service of the company—old Esau, a full-blooded Ojibwa, who had served thirty years with Stuart's father and now followed the fortunes of the son. To the Indian, when the supplies were unloaded and the empty freighters had started back on the trail south, Omar related what he had overheard on the beach—how the hunters from the Pipestone country had been kept from trading at Sunset House by the tabu of the shaman, Jingwak.

His wrinkled face as bare of expression as if carved from wood, the old Indian sucked on his pipe as Omar told his story. For a space Esau was silent, his slit-like eyes on a moccasin; then a gnarled hand removed the pipe while his seamed features faded behind a cloud of smoke.

"Ah-hah!" he muttered, at length. "So dis Jingwak put de devil into Sun-

Paradis.

set House. Wal, we put de devil into Jingwak."

"Good!" agreed Stuart, "but how?"

Esau's beady eyes met the widening grin of Omar as he answered: "Omar evair tell you w'at happen to Makwa, de beeg shaman at Wolf Riviere, manee long snow back?"

Stuart shook his head. "No, what happened?"

Esau was not to be hurried. Calmly cutting a pipeful from a plug of Company nigger-head, he refilled his pipe and lighted it before replying. "Dis Makwa," he said, "he t'ink he mak' de beeg medecine. He come an' say to de ole man at Wolf Riviere, 'You geeve Makwa, de shaman, flour, tea, trade-good, an' you get all 'Jibwa fur. You not geeve Makwa dis, an' free-trader, he get de fur.'"

"What did the Hudson's Bay man say to that?"

The old Indian's eyes snapped with humor. "He don' spik noding; he sen' for Esau."

"What'd you do, Esau?"

Esau puffed for a space, his eyes on his moccasin; then he said: "Makwa, de beeg shaman, mak' medecine no more."

American Agriculturist, May 10, 1904

Stuart leaned forward curiously, "You chased him out of the country?"

The old man shook his head. Stuart turned to Omar, who chuckled: "Esau nevaire tell, but Makwa come to Wolf Riviere to trade next tam widout hees ear."

"What! Without his ears?"

"Ah-hah! He no good for shaman after he lose hees ear."

"You mean they were cut off?"

Omar nodded. "Without dem he was no good to mak' de medecine."

Stuart glanced doubtfully at the sphinxlike Esau, who avoided his look behind the screen of smoke.

"Do you intend to cut off Jingwak's ears, Esau?" he laughed. "That will be some job! They're a wild lot up there in the Pipestone country; they might cut off yours—or worse."

Esau Has a Plan

The lean face of the old Ojibwa shaped a cryptic smile as he rose with a grunt and went out to visit the gill-nets below the post.

"Do you believe the old rascal actually cut off the medicine man's ears?" Stuart demanded of the grinning Omar.

"No one know. Esau nevaire tell."

"But the shaman, you say, lost his magic with his ears?"

"Ah-hah! All de 'Jibwa laugh at heem affair dat."

"Well, I'll say that's a great yarn, anyway. But what do you suppose Esau meant when he said he'd put the devil into Jingwak?"

The half-breed shrugged. "I don't know. De fader of Esau was a shaman, a sorcerer. Esau, mebbe, got frien' among de devil."

His supplies and trade-goods properly checked and stowed away against the coming of the Ojibwas for the Christmas trade, Stuart prepared to follow the freight canoes, with his fur from the spring trade, down to Lake Expanse, the headquarters of the district. There he would listen, in sullen silence, while his chief, Andrew Christie, talked deep into the night of the failure of Sunset House to obtain its share of the trade. Again, as he had in January, when he brought down the fur from the Christmas trade by dog-team, he would explain the situation which confronted the struggling little post, opposed by the astute LeBlond and his able assistants. But the stubborn Christie would shake his grey head and dwell on the disappointment and chagrin which had been his over Stuart's failure—how from all the young Company men he knew, he had recommended for this important job, him, Jim Stuart, son of the famous James Stuart who for decades had held the trade of the God's Lake country against all comers. With endless reiteration the stiff-necked inspector would dwell on the cost of building the post and its small yearly returns in fur while Jim, raging inwardly, endured in silence. And, from the increasing stiffness in the manner of his chief, the discouraged Stuart knew that the end of Sunset House would mean the end of his advancement in the Company's service. For a failure is a failure. The fact that he had been chosen to lead a forlorn hope—that Sunset House was doomed from the beginning, would be forgotten. He would have had his chance. If he stayed with the Hudson's Bay, they would send him somewhere as clerk, assistant to a luckier man.

But the journey to Lake Expanse would consume a fortnight, and the thought of what might await him behind a certain split rock on an island ten miles across the unruffled surface of Mitawangagama led him to postpone his start with Omar.

CHAPTER V

THE SPELL of the northern summer was on cloudless sky; the dusky, spruce green of the ridges; the cool

(Continued on Page 18)

New York's New Farm Laws

(Continued from Page 2)

except those providing for the county tuberculosis hospitals. The bill was signed in this amended form.

Hewitt Reforestation Amendment

This proposed amendment to the constitution calls for the expenditure of \$20,000,000 over a long period for the reforestation of vast acres of idle land not suitable for farming, to be managed with scientific forest practices, to grow timber for the future, to regulate stream flow, to protect all water supply and to provide for recreation, hunting and fishing. This extremely important proposal has now been passed twice by the Legislature which is required by the Constitution and will be submitted to the people of the State for their approval or disapproval at the next election. If it passes and finally becomes a part of the constitution of the State it will provide for a reforestation program equalled by no country or state in the world.

Forest Preserve Greatly Extended

The Legislature also passed another extremely important conservation law extending what is known as the "Blue line", which is the outside boundary of the great forest preserves of the State, particularly the Adirondacks. Under this new law the boundaries of the Adirondack forest preserve counties have been widened to take in a million more acres, in the Adirondack region, so that now the forest preserve lands of New York State are larger than in any other state in the Union, not excepting even the great Yellowstone Park.

Special Appropriation Bills

In the regular appropriation bills submitted by the Governor and finally passed by the Legislature, the agricultural interests of the State were well taken care of. Several appropriations were made to Cornell, Geneva, the agricultural state schools and for other necessary agricultural work. In addition to the farm appropriations and the regular budget bill, many special appropriation bills for agriculture were introduced. As stated in the beginning of this article it was necessary for the Governor to veto many of these because there was not State money enough to pay for them. However, he did sign the following: A small appropriation to the New York State Agricultural Society to celebrate its 100th anniversary; another small appropriation to the New York State Fair to make it possible to help local or subordinate Granges put on better exhibits.

Bills Which Did Not Pass

We have already mentioned two bills which were vetoed by the Governor. One was a three-fourths year automobile license bill; the other affected junior operators' licenses and would have given young folks over sixteen the right to get a license which would authorize them to drive a car anywhere except in cities of over 250,000 population. It was too bad that this last bill was vetoed because the present law discriminates against country boys and girls who find it very difficult to get a junior's license and who need this license so that they can drive cars back and forth to school. They also can carry milk and otherwise aid in the necessary farm business, which is nowadays so dependent upon the automobile. Most farm boys and girls reared in the sane atmosphere of a farm home are just as good drivers at sixteen as they ever are. In fact, they are much better than many careless, ignorant, older drivers.

Special Appropriation Bills Vetoed

Nearly all of these were excellent bills but the Governor was obliged to veto them as stated above because there was no money with which to pay the appropriations, and put the provisions of the bills into effect. One of these makes an appropriation to the New York State College of Agriculture for making a study of the use of elec-

trical equipment upon farms and in farm homes. This study might lead to a more efficient use of electrical equipment and possibly also to better equipment and lower prices. The bill did not get through the Legislature.

The Governor vetoed an appropriation bill calling for some additional funds for the completion of the animal husbandry program of the New York State Department of Agriculture. A small appropriation for a memorial to Babcock the inventor of the Babcock test was also vetoed.

One of the most important vetoes was of the bill providing for \$350,000 for a horticultural building at the New York State Fair. Fruit growers of the State have planned and hoped for this building for many years and it is one of the great farm needs of the State. The Governor is in sympathy with the project but there were no funds with which to carry it out.

Several appropriations for State schools of agriculture, particularly for a school at Delhi and at Farmingdale were also vetoed because of lack of funds.

Gambling at Fairs

This bill would have permitted the use of wheels of fortune at all fairs in

the State. It would have been a distinct step backwards after many years' work of farmers, farm organizations, and the farm press and the State Department of Agriculture, to clean up the fairs and put them on a cleaner basis and more in line with the ideals of agriculture. Moreover, this bill is, in our opinion, unconstitutional. Therefore, Governor Roosevelt is certainly to be congratulated for vetoing this bill.

Regional Markets Bill Defeated

We regret that the Legislature was unable to pass this bill which provided for the study of the needs of several localities for a state regional market and the purchase of an option or two for this first market. The idea back of the bill was that this would have been a start towards establishing as soon as practical a comprehensive state-wide system of regional markets for the purpose of providing suitable outlets for the products of the farm and of decreasing food cost to consumers. Such markets shall be owned either by the State or jointly by State and city, or jointly by State and one or more counties. They will be under the direction of the State Department of Agriculture and Markets. Here is

a proposal that certainly must have consideration again next year.

Sale of Farm Produce

The Legislature failed to pass this important bill. It would have increased the protection which farmers have in dealing with commission merchants. The present law would have been widened to include all kinds of dealers in farm products and would have required them to take out a bond of not less than \$5,000, or more than \$20,000. This bill should be passed next year.

School Fee to Supervisors

We have called attention several times to the present provision of the education law whereby local town supervisors collect 1% of all school money without rendering much service in return. A bill was introduced repealing this provision of the law but sad to relate, the Legislature failed to pass it. This must certainly be remedied next year.

In Denmark, where records are kept on 31.3 per cent of the cattle, the average cow produces 41.6 per cent more milk than the average cow in the United States, where records are kept on only 2.5 per cent of the cattle.

There are 200 practical applications of electricity and of General Electric equipment to farming. Consult your electric power company or electrical dealer -- find out what labor-savers will bring you the greatest immediate profit

General Electric Brings You Running Water

---and heats it too!

"In the average farm home, pumping and carrying water for household purposes alone consumes 30 eight-hour days each year. A small electric water system does away with this work entirely, thereby releasing some member of the farm family for a full month of productive labor. This same system automatically supplies water for the barn, fire protection, and general farm uses."—From an agricultural college report.

One farmer says, "The electric pumping of a thousand gallons of water on my farm costs about 5 cents. Just compare that with the cost of even the cheapest hand labor."

A General Electric motor and pressure

switch on your water system, and a G-E Hotpoint water heater will provide hot and cold water when and where you want it at the turn of the tap, the year round.

Farm work demands and profits by an abundant supply of water in every building. You will be money ahead if you arrange to have electricity supply the water. Consider a system of sufficient capacity (400 to 450 gallons per hour) to provide fire protection in addition to water for the kitchen, bath, laundry, barn, poultry house, dairy, garden, and yard.

Send for our new booklet "Electric Helpers on the Farm." Address Room 313, Building 6, General Electric Company, Schenectady, New York.

Join us in the General Electric Farm Program from WGY, Schenectady, every Monday evening at 8 o'clock (Eastern Standard) and in the General Electric Program every Saturday evening over a nation-wide N.B.C. Network

Under Frozen Stars

(Continued from Page 16)

depths of the translucent lake, as Jim paddled alongshore toward the sturgeon set-lines at the outlet, to deceive the sharp eyes which followed his departure from the post. The stem of the light birch-bark nosed a soft ripple along the sleeping shores. To the south the islands hung as if suspended in the clear air. As his dripping paddle flashed in the sun, from the greenery of a mirrored ridge a dore rose. His golden scales flamed as he turned in air and fell, to start a circle of ever widening ripples from the broken surface. Far to the south a moose was leisurely crossing from mainland to island. Overhead, on lazy wings drifted two

northern ravens, while high in the heavens a dark spot marked where an eagle calmly surveyed a thousand square miles of lake-splashed forest.

One calm night in June, during the spring trade, he had overheard an old squaw on the shore, gazing at its liquid mirror shot with points of light, call it Anagami, the Lake of Stars. Jim's eyes followed the black timber of the shore lifting to the shoulders of the ridges, until far in the west it faded into blue haze. Seventy miles of this, he thought bitterly, with lake trout and sturgeon, dore and whitefish for the mere setting of net or line, with moose and caribou and fur in the back country. And in two or three years LeBlond would have it for his own.

Then with a savage lunge his paddle tore the water to foam. Across the lake they laughed at the name, Sunset House, did they? So they held the whole Pipestone and Sturgeon River trade by bribing a sorcerer! Well, as Omar said, there were ways of handling a shaman. LeBlond and his men, Paradis and Black Jules, would learn something before the snow fell about the taming of medicine-men. Esau was an old hand at that game. He and Omar should have their wish. They would go to the summer camps of the Pipestone Lake Indians—carry the war into the enemies' country Jim Stuart's future as a fur-man was at stake. He'd played fair, but now all rules were off and henceforth there'd be no quarter.

A Reckless Game

Then his anger cooled as he thought of the girl whose message he was paddling ten miles to look for at the split rock. A reckless game, this, he admitted. Some day she'd be seen and followed. They, even, might be caught! Then what? He laughed aloud at the thought. Well, she was worth it—this bewildering daughter of LeBlond. He remembered, with a deep drawing in of the breath, the weight of her in his arms as he took her from the lake—the touch of her hair on his face.

It was mid-forenoon when the birch-bark of Jim Stuart approached the split rock on the stony beach of the island. Stepping from the canoe, Jim's eager eyes searched the bushes behind the rock for the telltale white of the

note which she had promised to leave. Then, lying under a small stone, he saw to his surprise a folded sheet ruled, as if torn from a small note book. It did not seem like her—this soiled scrap of paper at his feet. Puzzled, he picked it up and read:

"This is your first and last warning. Louis LeBlond will see that there are no more love notes here for you. The next time you come for a letter you'll get lead."

The note was written in pencil in an immature hand and unsigned.

"Paradis!"

(Continued Next Week)

Give the Chicks More Room

(Continued from Page 12)

and most rugged pullets in the fall are the ones that were reared in the smallest flocks. It is for this reason that some poultrymen who have tried out the large unit plan of rearing, and with considerable success, are nevertheless going back to the small colony units. A house 10 by 12 feet can be moved to clean ground, it is hard to move them much larger than that. A 500 chick coal stove (as rated by the man who sells them) will nicely fit into a house of that size. And 250 to 300 chicks will fill the house. If you must brood 500 chicks in one room be sure that it is at least 12 by 14 feet. And then in any case if it is at all possible encourage the birds to forsake the house and roost in the trees as soon as they can fly well. That is not always wise where there are natural enemies or thieves.

The "range shelter" has come into quite general use in recent years as a means of solving the problem of overcrowding at a relatively low cost. It is merely a brooder house with no side walls or floor, just a very low roof covering a set of roosts. It is enclosed with wire netting so that it is a protection against animals. It is light enough that two men can pick it up and move it to a clean spot easily. The cost for materials need not exceed fifteen dollars. Pullets or cockerels are moved into the range shelters to relieve congestion in the brooder houses.

Now in conclusion let me say that you will find plenty of people who will tell of putting 500 chicks in a little two by four brooder house and raising a fine bunch of pullets. But what you will not hear about are the much larger number of other gamblers who were not so lucky.

HANDY ANDY Says "Here's How"

To Save When Feeding Beef Cattle

By Ray Inman

Fattening cattle on paved instead of muddy lots makes the following gains per head of cattle.....

1. Hogs following steers on lot	\$ 2.00
2. Reduced labor cost	1.00
3. Saving in manure	1.50
4. Added comfort to stock	2.50

This makes the paved feed lot the most valuable piece of livestock farm equipment—next to the silo.

A Deposit---But Not in a Bank

Will you please give me information concerning the George Carpet and Rug Company, 1037 Street and 3rd. Ave., New York City, as their agent called and agreed to take a rug and have it made into four runners. I made a deposit of 25% of the bill which was \$17. He took the order on the 13th of March and promised to call for the rug on the 28th of March. They haven't called for it yet. The agent's name is J. B. Biml, 232 Chumel St., Poughkeepsie, N. Y.

THE New York Better Business Bureau advises us that they have no record of the George Carpet and Rug Company, that they are not listed in

scribers who have been shipping to him are not receiving returns promptly.

Know Reliability Before Shipping

Last fall I sent some rabbits to the Hudson Poultry Company and they made returns all right. However, they charged me return express on the coop and never sent the coop, at least I never received it. I wonder if you can get this coop for me?

INFORMATION that we have indicates that the Hudson Poultry Company is out of business and they have been unable to locate the people who ran the business. We are always glad to report to subscribers regarding the financial rating of any firm in the city.

Fraud Order Against Keith's Music House

IN our issue of April 18, we told of an experience of a subscriber with Keith's Music House. Now, we learn that a postal fraud order has been issued against the Keith Music House and their officers and agents at Long Branch, New Jersey. According to information developed by the postal department, Keith admitted that he never made a study of music and was not able to compose music, but claimed to have a composer to do this work for him. Mr. Keith was a typewriter salesman and his activities were conducted in a small apartment.

Buyer of Purebreds Entitled to Papers

I would greatly appreciate it if you would try to get for me registration papers for a Holstein calf that I bought of A. L. Hollingsworth, Penn Yan. I bought this calf some time ago and part of the agreement was that the animal was to be transferred to me. I obtained blanks, made the markings of the calf, and sent the blanks to him. However, I have not yet received the papers. I paid the full purchase price of the calf when it was delivered to me.

WE have been working on this case for some time. We have written a number of letters to Mr. Hollingsworth, and have asked the Holstein Friesian Association to assist us in the matter. We began working on this

Write Us About Questionable Schemes

There have recently been a number of boys around here selling a 35c book. They get inside the house by inferring that they are getting some information about radio. After they get inside it develops that they are simply book agents. There are a number of other questionable schemes in this vicinity, for example, a collector called at a farm house and collected \$16 balance due on an automobile. A few days later the real collector called but by that time the swindler could not be located.

In another scheme practiced, a man calls and claims to be a real estate buyer. If the farmer happens to be absent he looks all around the place and after he has gone the owner begins to miss property. We heard of one other case where a hunter called looking for his lost dog. Perhaps he did lose a dog, but at any rate, after he was gone the farmer missed his own dog and believes that the hunter took him.

WE are always glad to have subscribers write us about cases like this. One suggestion we can give is that our subscribers use good old-fashioned horse sense in dealing with strangers who are not able to identify themselves. Because of so many bogus agents, reputable houses that send agents on the road usually give them identification cards or buttons which

case about the first of December, 1930, and up to the date of writing this our subscriber has not yet received registration papers on this animal.

In this connection it seems that one of the surest ways to get registration papers is to insist upon retaining part of the purchase price until the papers

Reward!

HENRY MORGENTHAU, Jr., publisher of *American Agriculturist*, has a standing offer whereby he will pay a reward of \$100 for information leading to the arrest, conviction, and imprisonment of any person who swindles or attempts to defraud an A. A. subscriber who, at the time, has prominently displayed on his farm a yellow *American Agriculturist Service Bureau* sign.

are actually delivered. It is our contention that when a man purchases animals represented to him to be purebred that he is entitled to registration papers unless a definite agreement is made that papers are not to be furnished.

Can Market Be Guaranteed?

A SUBSCRIBER asks us concerning a firm who advertises to buy back rabbits. First, he would have to pay \$425 for a bunch of rabbits, consisting of ten does and one buck. Then the company guarantees to buy back all rabbits at the age of five months for not less than 25c a pound.

Our subscriber asks if they are reliable and says, "I do not see how they can promise anything like that for five years." Neither does the *American Agriculturist* see how any concern can promise such a thing and we have consistently refused to recommend to our subscribers that they buy any form of livestock in the hope that they will be able to sell back the offspring at a profit. We have been forced to the general conclusion that firms that guarantee to do this are more interested in selling their stock at a good price than they are in buying back offspring at a profit to our readers.

We enjoy your paper very much; have had it to read for a long time. The stories are good. I have read "Just David" before but enjoy it again. The chestnuts are great and we look for them almost the first thing. Dr. J. W. Holland is best of all; I hope he will continue as he certainly is a philosopher. The article on feeding horses on straw is sound.—A Constant Reader.

the telephone directory, and that they do not know of any address similar to the one given.

Captain H. J. Nagell, Troop "K" of the State Police at Hawthorne, New York, advises us that Troop Reeves tried to locate Mr. Biml but found that there is no Chumel St. in Poughkeepsie and that no one at 232 Church St. knew Mr. Biml or anyone with a similar name.

We trust this information will save someone from a loss similar to our subscriber's.

Slow in Sending Checks

Recently we shipped a case of eggs to E. M. Benford of Mt. Vernon, and have not received returns on it. We have been shipping to him for some time and received returns for a while, but lately the returns have been getting slower and slower.

WE will do our best to get returns for you, but we cannot be too optimistic. We have had a number of complaints against Mr. Benford, extending over a period of several years, and have succeeded in getting settlements on some of them. At present, however, we have several which are still unsettled. Mr. Benford is not a commission man and is not licensed by the state for the protection of shippers. He buys eggs direct and, judging from letters we have received, our sub-

FARMEX FACTS

In 1904 Benjamin Holt, a California manufacturer of combined harvesters and traction engines, said to his nephew and engineer: "You remember grandfather's treadmill? I believe a treadmill built under a combined harvester would bear it up in soft soil"...That was the birth of the caterpillar idea in tractors—a construction that has meant much to large scale farming.

FARMEX

EXPLOSIVES

Today farmers everywhere are realizing the value of clean, straight fields which permit the use of modern machinery. Should your fields be obstructed with stumps, boulders or rock ledges—remove them with Farmex Explosives. It's the easiest, quickest, cheapest way of doing such work. Write for information.

Glorious Yellowstone Is Calling You!

Come with the American Agriculturist Party in August

Next August a happy family of American Agriculturist readers and editors will take a holiday together. We are going to Yellowstone Park. Will you go with us?

What a trip has been planned! We'll see how our western neighbors farm. We will stop at Bismarck, the Capital of North Dakota and go by motor car across the Missouri River to Mandan, where Sioux Indians are waiting to dance for us.

At Bozeman, we will leave our Special Train and motor through the rich Gallatin Valley, Montana's farm paradise. We will visit the world's largest cattle ranch and stop for luncheon at Karst's Dude Ranch, beside the rushing Gallatin River. We will tour the American Rockies—and then Yellowstone! Geysers, bears, the Grand Canyon—astonishing natural phenomena which travelers come around the world to see.

Three full days we will spend in the Park, with our days filled with adventures and our evenings gay with music, dancing and entertainment in the cozy, hospitable Lodges. Our vacation includes vast irrigation projects in Montana and Wyoming, sight-seeing in Bozeman, Billings, Miles City, Montana; Jamestown and Fargo, North Dakota, and the great Twin Cities of Minnesota.

The cost of this glorious trip is surprisingly low and it includes all expenses, even personal tips. We'll travel in the height of style and revel in the meals for which Northern Pacific and Burlington Dining Cars are famous.

Will you join us?

The coupon, a postcard or letter will bring all details promptly

Let's go. These Indians, one of whom was at the Custer massacre, will stage a war-dance for the American Agriculturist Yellowstone party at Mandan, North Dakota, on August 3. A special train carrying our party will leave New York City at 9:00 A. M. August 1, and will return to New York on August 11. Every detail of the trip will be arranged for you. Write to American Agriculturist for complete information.

ALBANY ZONE -- See Page 7

SPRING PASTURE NEEDS HELP - IT'S FOUR-FIFTHS WATER!

If you could wring all the water out of 10 pounds of spring grass, the water itself would weigh 8 to 9 pounds! Think of it! 8 to 9 pounds of water in every 10 pounds of grass. So much water, in fact, that a cow can't eat enough of spring grass to give herself all the actual feed she needs. These are the words that come from the Illinois Experiment Station. Spring pasture does make the milk flow look good...but it has the knack of urging a cow to rob her body and even her unborn calf to do it. So spring pasture does need help from the barn...in the shape of feed.

When you put Purina Cow Chow and spring pasture together you always get the same answer...milk in the pail at the fewest cents per gallon over a long-time period. The difference shows up not only in the spring...but in the late summer and fall. Then you see cows still filling the pail...you see calves in the barn standing on all-four...all because cows didn't rob their bodies and their calves during the spring. These are things which every man with cows likes to see...these are things which you will be sure to see when Purina Cow Chow is your feed. Purina Mills, 898 Checkerboard Square, Saint Louis, Missouri.

Because Purina Cow Chows are such good feeds you can make 100 pounds of milk with less feed...less money...fewer cows. That means something in these days.

Plans Under Way to Preserve Covered Bridge for Historical Interest

ON the same day that I received your April 25 issue, the following article which I am copying for you, appeared in our local paper, the *Rutland Herald*. As this article is connected with another on page 5 of your magazine, I thought you might be interested:

Pittsford Bridge Data, Photograph Sought by Ford

Wallingford, April 21—Local admirers of Nicholas Powers, now acknowledged the greatest bridge builder of his time, were interested in the report that Henry Ford had offered to buy the bridge built by Powers at Blenheim, New York, the longest single-span wooden bridge in the world, which is giving way to modern traffic demands. They wrote him about the covered bridge at Pittsford, Powers' first work. This bridge now nearly a century old, is being replaced by a steel structure. As a typical Vermont covered bridge and the first work of its great builder, it seemed to them that it should be preserved. They have just received the following letter from the superintendent of The Edison Institute of Technology, the great American museum founded by Henry Ford at Dearborn, Michigan:

"We very much appreciate your interesting letter of April 3, with reference to the Blenheim Bridge and Nicholas Powers, its builder. Is the other bridge at Pittsford a covered bridge also? If so, we would like to get some snapshots and advice as to whom we should communicate with regarding it. Please also send us the dimensions if you can."

"The Pittsford authorities may co-operate with Ford's institution in preserving this record of Vermont's early days. Although it is the work of a boy (it was built when Powers was only 20 and his father had to go security for the lumber) it shows, the marks of his genius."

* * *

I was very pleased to have the photograph of the Blenheim Bridge from your paper to preserve with this other article and pictures of my home-town bridge. Our bridge, also a large covered one, good for another hundred years of hard usage, only that a wider bridge was necessary due to the curved road entering it, causing bad accidents. I do not know at this time whether or not any further arrangements were made regarding it, but the bridge has now been taken apart by the contractor. The descendants of Powers are living in Pittsford.

—KATHERINE B. MILLS,
Pittsford, Vermont.

Another Cure for Quack

IN your issue of April 25, page 7, I noticed an article on quack grass. About five years ago we had about a half acre just literally covered with it. We plowed this patch in the fall and again in the spring just as soon as we could. We harrowed and reharrowed it with a spring tooth harrow, raked it with a horse rake twice then kept harrowing with spring tooth and spike tooth harrow until about June 15. We then put the horse rake on again and planted to cabbage for two years, followed by corn, then oats, and seeded and we entirely eliminated it. Constant cultivating will rid a field of this grass. Don't give the roots a chance to start.

—R. H. WEAVER, DuBois, Pa.

* * *

I note that on page 7 of the April 25 issue, you request methods of killing quack grass. I will state that I had a piece that was very thick and have killed it by pasturing it with sheep for three summers. They seem to prefer it to other grass and they will also exterminate golden rod, live-for-ever, paint brush, and many other weeds, though, of course, they will not do well on land that is too wet. Witch grass should be pastured close.

—O. H. JACKSON, Westford, Vermont.

Timely Questions About Livestock

Raising Calves on Dry Grain—A Ration for Growing Pigs

I read somewhere about raising calves by the use of a dry grain mixture. I do not remember what the ingredients were and would like to have you send them to me.

The following is the mixture: 100 pounds of yellow cornmeal, 150 pounds of ground oats, 50 of oil meal, 50 of wheat bran, 50 of soluble blood flour, and four pounds each of salt, bonemeal and ground limestone.

Of course, calves are never raised without some milk, but experiments have shown that excellent calves can be raised by the use of this mixture together with high quality roughage after the calves are a month old. The calves begin to get this dry feed along with whole milk when they are ten days old. At the end of the first month they should be getting a pound a day then it is increased to two pounds a day and the milk supply stopped. The grain ration is increased at the rate of a pound a month until the calf goes on regular feed at the age of six months.

* * *

A Ration for Growing Pigs

Can you give us a good ration to be fed for growing young pigs?

The following ration is recommended by Professor Hinman of the New York State College of Agriculture:

Hominy, corn meal or finely ground barley.....	100 lbs.
Finely ground oats.....	100 lbs.
Wheat middlings.....	100 lbs.
Fish meal or tankage.....	15 lbs.
Ground or chopped alfalfa.....	15 lbs.

In case skim milk is available, one-half of the fishmeal or tankage may be safely dropped and the milk fed at the rate of three pounds to one pound of the meal mixture. This mixture may be prepared in bulk and kept before the pigs in a self-feeder. In the latter case the milk can be fed in a trough twice or still better, three times a day.

* * *

Garbage for Hogs

"What are the possibilities of profit from feeding garbage to hogs?"

Where garbage is available in considerable amounts, it can be used as a feed for hogs with some success. Tests have shown that twenty pounds of garbage will produce a pound of gain in hogs. Analyses of garbage on a dry weight basis give the following results: Protein, 15-18 per cent; Carbohydrates, 31-69 per cent; Fat, 13-33 per cent; Ash, 16-36 per cent.

The danger in feeding garbage is in having some injurious substance present such as glass, paper, soap, sawdust, etc. or in exposing the hogs to hog cholera through the presence of rinds from hogs that had the disease. Hogs fed on garbage should be immunized against hog cholera, and some arrangement should be made so that objectionable substances will not be put in the garbage. The garbage is sometimes cooked, to prevent disease, but this makes it difficult for hogs to pick out and leave injurious substances that they will not eat when it is not cooked.

* * *

Teach Lambs to Eat Grain

Do young lambs need grain while they are on pasture?

It is common to provide a "lamb-creep" with a trough where some oats, bran, or cornmeal is regularly given. In this way the lambs get in the habit of eating grain and there will be no setback at weaning time. Give them only what they will eat up quickly and keep the trough clean to avoid digestive troubles.

* * *

When to Wean Lambs

At what age are lambs usually weaned?

At about the age of four months. It is always a good idea to wean them during a cool spell in summer because when they are weaned during a very hot time they may get a serious setback. It is a good idea to take them far enough away from their ewes so

that they cannot hear each other. Keep the ewes on short pasture or on dry feed for a few days. After weaning the lambs need the very best of pasture and a liberal supply of grain to encourage rapid growth.

* * *

Flushing Ewes

Is there any evidence that the old practice of "flushing" ewes is beneficial?

Yes, there is some evidence that this is desirable. The practice consists of feeding ewes rather heavily for two or three weeks before breeding. It is claimed that this practice results in a higher proportion of twin lambs and that they are likely to be more vigorous. Another advantage is that ewes will lamb closer together, therefore shortening up the lambing period which is always an anxious one for sheep breeders.

* * *

Alfalfa for Horses

Can alfalfa hay be fed safely to horses either as a part or a whole of their ration of roughage?

The new York State College of Agri-

culture reports that horses which were fed alfalfa hay while they were working hard maintained their weight on less grain than other horses fed on timothy hay. With alfalfa the grain ration should be rather low in protein! for example, alfalfa and corn make a fairly well balanced ration.

With a grain ration higher in protein it is best to give horses half alfalfa and half timothy. Alfalfa is an especially good roughage for growing colts.

* * *

Horse Has Scratches

Do you know of any cure for scratches or grease heel on horses? If so I would like to know what it is.—C.A.B., New York.

Scratches are usually caused by standing on floors which are not kept clean properly or by getting in mud which is allowed to remain on the fetlocks.

The first thing to do is to remove the cause. If the feet are heated and inflamed, a laxative of one pound of Glaubers salt can be given and if the animal is fed heavily on grain the feed should be reduced or replaced by bran

mashes or other laxative feeds. Where the legs swell badly the horse can be exercised on dry roads. Evenly applied bandages wet with a mild astringent such as extract of witch hazel, are good. If the legs are badly heated but if the skin is still unbroken a lotion of two drams of sugar of lead to a quart of water may be applied on a thin bandage which is covered in cold weather by a dry bandage.

Another treatment recommended is to smear the sore parts with one ounce of vaseline, one dram of sugar of lead and 10 drops of carbolic acid.

* * *

Dehorning Young Calves

Can you tell me how to dehorn calves, and what to use. How old should the calves be?

The question of dehorning calves comes up regularly every year but we are always glad to publish the information. Before the calf is a week old, the hair should be clipped from the horn buttons where the horn starts. Vaseline should then be rubbed in a circle around the horn button to pre-

(Continued on Page 7)

What to Do When the Lawn Mower Balks

A WORN lawn mower is discouraging to anyone who has an ambition to make the summer's lawn a thing of beauty. At best the job of cutting the grass is far from easy, but the method of sharpening the lawn mower that is given here will make it easier.

A lawn mower is a rolling shears. It will run freely when in proper trim and will fairly eat up the grass. Our job is to restore the factory fit it had when new by making use of the adjustments that are on every mower.

Two main features are found on all mowers—the rotating knives called the rotor in this article and the breast knife or stationary blade extending between the frame parts that support the wheels. There is an adjustment that brings these two features close to take up wear and allow for the shearing fit that must be found if the mower is to cut smoothly and easily. A free running shear is the proper adjustment.

To adjust the mower you will need a small wrench, a new 8 inch flat file and

a good pair of pliers. Possibly a screw-driver should be added to the list. First, adjust the stationary knife away from the rotor which should then turn freely. To take up wear is the first job. If ball bearings are found this is easily done by adjusting one of the cones at the ends of the shaft of the rotor. It will take a little study to find what system is used to permit this adjustment but it is easily discovered by the usual "trial and error system." If the job is a common plain or split bearing type it is more difficult but possible just the same. There will be a jam nut and bolt that acts on the boxing in such a way that the clearance can be taken up. It will usually be on the under side of the boxings near the wheel mountings.

The fit must be such that the rotor will run free, but when shaken by hand for up and down motion there must be none. This is important for a close fitting rotor makes a keen shear when in contact with the breast knife. After

getting the rotor adjusted, the condition of the stationary knife must be inspected. This is a heavy metal frame on which is fixed a thin piece of tool steel. When properly prepared it has a blunt edge, made by the flat upper surface meeting the ground front edge, that is as wide as the thickness of the steel. The shearing wear of the rotor in time takes off this edge and makes a surface where there ought to be only an edge. If an emery wheel is available dismount the knife frame and grind it carefully, moving it back and forth so it will remove the metal evenly and restore the blade to the original fit which is obtained when the front edge has been ground back to the original upper surface. This leaves a durable edge that will stand the shocks of sticks and small stones without injury. This can also be done with the file without removing the knife but it is a tedious job.

When finished, reassemble the knife and using the adjustments bring the rotor and knife to a shearing fit at some one place. By rotating the cylinder it will shear and miss depending on whether or not the knives have the proper radius to touch the breast knife. By carefully noting the "high spots" turn the rotor until these same high spots can be filed away. Aim to preserve the hang of the edge of the rotor cutting blade and tilt the file as you move it across the edge. As soon as it clears as it is turned again adjust the clearance to make it shear again. File away these high spots and make it clear again. Repeat the operations until when adjusting for shear you will get a continuous shear at all points. This is the true condition wanted and is easy to get if you will file only the high spots and stop as soon as they clear. It will take patience and many trials to locate the high spots by rotating the cylinder many times. But it can be done and done well. After satisfying yourself of the success of the job of filing, carefully tighten all adjustments so they will remain permanently in place and oil the mower. It is now ready for service.

Always mow around a lot or plot of the lawn. Select the right direction. One way will throw the cut grass away from the standing sward. That is the right way. If you go back and forth it throws the grass on the uncut growth and the next cut is ragged. Cut the grass often and let it lie. It will dry and fall below the cut surface, mulching the lawn and giving it life and vigor. Oil the mower frequently. Keep it shearing keenly and working freely and it will last a long time.—MARK E. SIMON, 180 Holley St., Brockport, N.Y.

The Song of the Lazy Farmer

OF ALL advantages of spring there's none like pieplant pie, by jing, it has a tang that gives you pep and puts the spring into your step, you tear them stalks of rhubarb loose and stew them up in their own juice, you put a layer 'neath the crust and eat until you almost bust. I've et most ev'ry kind of pie and all of 'em are good, but I am here to state that pieplant's best, give that to me and take the rest. When made by my Mirandy Jane you pass your plate for it again, of all the desserts that there are, pieplant has got them beat by far.

I'm sorry for the town folks who ain't got no fresh rhubarb to stew, they git it wilted at the store, its freshness gone forever more. To make good pieplant pie you've got to git it from your garden plot, and while it's covered yet with dew you put it in the pan to stew. While congress talks about the farm and tries to keep us all from harm, and while the farm

board buys our wheat, I've got a scheme that can't be beat for farm relief, there ain't no brand to tie a feller to the land and keep him there to live and die, like feedin' him fresh rhubarb pie. That pie's relief enough for me, with plenty on my plate I'll be contented with the farmer's lot, there ain't no other feller got a dish to equal pieplant pie. I'll holler for it till I die!

Letters to Lighten Shut-in Hours

AFEW more names have been received in the A.A.A. office of people who have been confined to their houses through illness or accident for months and even years. To you who are well and strong and whose days are filled with the satisfaction of activity and work, time has no meaning, but to those shut-in from the outer world, time weighs heavily indeed.

Will you not write an interesting letter to those whose names appear below, and help to lighten the long shut-in hours? Do not write expecting an answer because that would only add to their troubles. Send in the names of other shut-ins you know, if you have their consent to do so, and we will publish them.

Mrs. Amanda Parker, R.F.D. 3, New Berlin, N. Y.
Mrs. Walter Wood, 8 Meadow St., Ludlow, Vermont
Mr. L. S. Glynn, Coolidge Avenue, Rutland, Vermont
Mrs. John A. O'Connell, Box 316, New Berlin, N. Y.
Mr. Raymond Ellis, R. D. No. 3, New Berlin, N. Y.
Mrs. Ernest Eveleigh, R.F.D. No. 1, Dexter, N. Y.

The Harder Farmers Work the Less They Have

MANY economists who are trying to find some way of preventing the recurring hard times which plunge the world into the dumps every few years, believe that one answer to the problem is to work only four or five days a week, and perhaps only six hours a day. The thought back of this idea is that machinery has so greatly increased production that all the world's needs can be supplied with much less man-power than was required before the days of machines.

Look how machinery has changed farming, for example. It took three-quarters of the people of this country to grow our food not so many years ago. Today it requires less than one-quarter. And the same principle applies to factories as well as to farms, except that factories, through good influence of labor unions, have learned to shorten their working day from ten and twelve hours to eight hours. Farmers, however, are working just as long as they ever did.

The State Agricultural College of Wisconsin recently made a survey to find the number of hours per day that farmers now work. Three different parts of the State of Wisconsin were chosen, including the section where fluid milk is produced for the City of Chicago. According to the studies made in this investigation, the Wisconsin farmer works 9.6 hours on weekdays, and 5.7 hours on Sundays. During the summer he works on an average of 10.2 hours on weekdays and 5 hours on Sundays, and 9 hours on weekdays and 6.5 hours on Sundays during the winter

months. He has, therefore, 66 hours a week in the summer, and 61 hours a week in the winter.

Professor D. R. Mitchell, commenting upon this report, says, "Many of us had hoped that the use of power equipment on Wisconsin farms would result in reducing the length of the working day . . . the mechanization of Wisconsin farms has enabled one man to do quite an amount of work in less time, but the records show that the time saved has been used for increasing production, rather than for increasing leisure."

The farm labor figures obtained in Wisconsin are quite similar to those obtained in other states. In Minnesota, for example, dairy farmers and small grain farmers are working almost two hours more daily now than they did twenty-eight years ago. In New York State, Professor Myers of the State College of Agriculture says that the farmers here work about ten hours a day, but calls attention to the fact that in the city, the working-man spends about an hour more a day getting back and forth from his work, in addition to his eight-hour day.

The conclusion is, of course, that the harder the farmer works, the more he produces and the less he has. As an individual, he cannot change this because he must have a lot of stuff to sell to keep ahead of the sheriff, but an organization which included most farmers, could cut down production by shortening the working day on farms, and at the same time give farmers more income as well as more leisure, and happiness in general.

Oleo on State Fair Grounds

AT a recent meeting of the New York State Fair Advisory Board, the policy was advanced to prohibit the showing or sale of oleomargarine on State fair grounds. It is a question if the Fair authorities could legally do this, for after all the Fair is largely supported by public money.

In commenting on this subject, Commissioner Pyrke, of the State Department of Agriculture and Markets, said:

"During the ten years that I had been connected with the state fair, the question of oleomargarine has cropped up regularly. So far as I know, oleomargarine has never been permitted in the dairy building or in any agricultural building; it has been permitted in the building which has been assigned to industry. Oleomargarine, under the law, unless it simulates butter, is a legitimate object of food. I think we have every justification for excluding it from the dairy building or from any environment where it would appear as an agricultural or dairy product, but I do not see how we can deny it the status of a manufactured product."

Investigation Shows Milk and Bread Prices Too High

AUNITED STATES Senate committee, investigating the prices of food products, made its report on March 2nd, 1931, and stated that there was an alarming tendency toward monopolistic control of the food of the nation by a small group of powerful corporations and combinations. The report was particularly critical of the large wholesale bakery companies and of the milk dealers.

This report on bread read as follows:

"The committee finds that throughout the country as a whole there should be an immediate average reduction of at least one cent per pound in the wholesale prices charged by the large baking corporations for their standard breads, and that a corresponding or greater reduction should be made in retail prices.

"The retailer of bread charges a gross profit of at least one cent per pound loaf. This amount, which the retailer obtains for allowing the bread to be placed in his store and for delivering it to the consumer, is, at present prices, equivalent to the total amount the farmer receives for interest on his investment, for preparing the land, planting, tending, harvesting, and delivering to market the wheat contained in one pound loaf of bread."

The committee further reported that the baking industry is "dominated by a few extremely large corporations," which have earned excessive profits and the capitalization and recapitalization

of which have resulted in at least two instances in a grossly inflated volume of securities.

What the committee had to say on the milk marketing situation will be extremely interesting to dairymen. It found that the lower prices paid to farmers for milk purchased for fluid purposes have, in general, been reflected in the retail prices charged to the consumer.

"What has actually occurred is that in the majority of cases, the reduction to the consumer has been taken wholly from the price paid to the farmer without any portion of the reduction being borne by the distributor," and, also, that

"The reduction in the price paid to the producer for milk used in the manufacture of dairy products which is usually purchased at the surplus price, has not in general been reflected in the retail prices paid by the consumer for dairy products.

"On the average the farmer receives less than half the retail price of the milk consumed as fluid, although he has investments much greater than that of the distributor."

This is exactly what we have been saying, both about milk and bread prices, for a long time. Of course, consumption will decrease if retail prices are too high, but we are not in favor of reducing retail prices when the dealers take all of the reduction out of the farmers' prices.

Fruit Fly Eradicated

FLORIDA has won its great battle against the Mediterranean fruit fly. Federal inspection service in the infested areas was withdrawn the last of March. Measures used to exterminate this pest were drastic, to the extent not only of destroying great quantities of fruit but even of some orchards. But such measures paid and the Federal Department of Agriculture, the State of Florida, and the growers are to be congratulated for their successful fight. Would that the fight to destroy the gypsy moth, San Jose scale, Japanese beetle, corn borer, contagious abortion, bovine tuberculosis, and a dozen other great insect and disease menaces to agriculture might be won as easily.

Good Prices for Horses

FOR several years AMERICAN AGRICULTURIST has been telling our friends that it might be a good business to raise one or two colts providing they were well bred. That this advice was good is shown by the fact that horses are now selling at better prices than in any recent year, although prices of all other livestock are materially lower.

There will, of course, never be any great boom in horses. They are disappearing from the roads and even from the farms, but there will be, for many years to come, some demand for good farm horses.

Wool from Dead Sheep?

THERE is quite a common belief to the effect that hair continues to grow for some time after death. Whether this is true or not, and it probably is, it has been definitely proven that if the skin of a sheep is treated in special ways after the sheep is dead, it will continue to grow wool for an almost unlimited period.

Do not get excited because of increased surplus in wool which might come from this source, because there are not many wool growers who would care to keep dead sheep around.

Eastman's Chestnut

IDO not know who should appreciate this story the more—husband or wife. Anyway, read it and judge for yourself.

The stalwart man burst into the dentist's office and held forth as follows:

"Now, look here, I've got no use for these new-fangled notions—gas and cocaine and painless extraction, and all that rubbish. The tooth's given a lot of trouble. All you need do is to yank it out—just yank it out."

"Well," said the dentist, "you're a plucky fellow. Just step into the chair."

"Oh!" said the stalwart man, "it isn't my tooth. It's my wife's. She's downstairs."

With Our A.A. Boys and Girls

The 4-A Medal---Some Information About Winning This Award

It was an inspiring sight at the Master Farmer banquet at Ithaca on February 12, when Governor Roosevelt presented 4A medals to six young folks. The awards were made by the American Agriculturist for the first time to Mary Carley, Manlius, Onondaga County; Theodore Hubbard, Brisben, Chenango County; Allman Culbertson, Dans-

which will be given each year to a small number of young folks. As indicated by the name, the medal is awarded for real achievement in three different fields; namely, as high school students in vocational agriculture, as members of 4H Clubs in New York State, and as Boy Scouts. In all cases it is practically essential that the winner of the award be actually living on a farm.

We are sure you would like to know how you can be considered for one of these awards, if not this year, then in years to come. First, of course, you must be a member of one of the organizations mentioned. Next, you must carry out the program of the organization to which you belong in an unusually effective way. Probably no high school student of agriculture will be given the award until he is a junior, which will mean that he has had practically three years in which to work for it. Many 4-H Club members have an even longer time in which to win the award. In 1930, for example, Miss Mary Carley had been in 4-H Club work for four years, while Theodore Hubbard

Governor Roosevelt presenting a 4-A medal to Mary Carley at the Master Farmer banquet, February 12, 1931.

ville, Livingston County; Clinton Stimson, Spencer, Tioga County; Nattie Eastman, Portville, Cattaraugus County; and William Allen, Marathon, Cortland County. As each one stepped to the platform to receive the medal, no person present could fail to realize that New York State agriculture and rural life are in good hands so long as we have this type of young folks coming up to take the place of those who are retiring.

Probably there is not a single boy or girl who reads this but would jump at the chance to receive such an award. You should remember that those who won it put in several years of hard work. If you are willing to work just as hard as they did, there is no reason why you should not strive to win one of these medals either this year or in years to come.

The term "4A" is an abbreviation of American Agriculturist Achievement Award and the gold medal with the name of the winner upon it signifies that the owner has received the award

had been in the work for five years. Boy Scouts living on farms also have a chance to work for this honor for several years. Assuming that a boy joins the Scouts when he is twelve he might conceivably work for the award seven or eight years and finally win it when he is nineteen or twenty years old.

If you are taking high school vocational agriculture and would like to be considered for the honor, talk about it to your teacher of agriculture, telling him that you would like to be considered this year if your record warrants it or that you would like his help in working toward the honor in years to come. If your teacher does not have all the necessary information with which to answer your questions, write either to W. J. Weaver, State Department of Education, Albany, New York, or to H. L. Cosline, Associate Editor, American Agriculturist, 461 Fourth Avenue, New York, N. Y.

If you are a 4-H Club member talk the matter over with your local leader and if you need more information send a letter to W. J. Wright, State Leader of 4-H Club Work, College of Agriculture, Ithaca, New York, or to us.

If you are a Boy Scout living on a farm, consult your Scout Master, your regional Scout executive, whose name your Scout Master will be able to give you, or communicate with O. H. Benson, Director of Rural Scouting, Boy Scouts of America, 2 Park Avenue, New York, N. Y., or to us.

When a definite application for the honor has been made, you will be expected to send in certain information

after which it is planned that some representative of the board of judges will call on you personally at your home. Then after the applications have been narrowed down to perhaps ten or a dozen, the records of those who are still in the running will be presented to the Master Farmer board of judges, which will be meeting some time next winter. Probably the award will be made to a total of six as was done this last year and these six will again be invited to attend the 1931 Master Farmer banquet and receive their 4A medals.

The Letter Box

I AM a vocational student of Mildred, Sullivan County, Pa. On May 20th, 1930 I bought 100 Rhode Island Reds chicks, and raised 99. I have 47 laying hens and in the month of December 1930, I got 71 1/12 dozen eggs, an average flock production of 58.54 per cent. In January 1931, from 46 hens I got 90 1/6 dozen eggs, an average flock production of 75.88 per cent.

December 29th, 1930, I set one hen and hatched 11 chicks, and at this date they are all alive and doing fine. I would like to hear from any one beating this record. —DOROTHY I. MINER,

Dorothy has made a fine record. Any of you boys and girls who can show a better one may want to write to her or if you will write to us we will be glad to print your letter on a boys and girls page soon.

Wants Letters

How are you? I am fine. I am just a beginner and I wish to join your club and have boys and girls write to me. I am twelve years old and my father's name is Albert Schmitz and gets the A. A. magazine. I am fond of pets. I have a pet duck and her name is duckie wuckie. Hoping to receive a letter soon. —WALDEN SCHMITZ, North Collin, N. Y.

Some of you A. A. boys and girls who are twelve years old will want to write to Walden and tell him what pets you have. We consider that every boy and girl is a member of our young folks whose Dad is a subscriber to A.A.

Wants to Become Member

I would like to know what one has to do to become a member of A. A. club? I am ten years old and am in the 4th grade. I have lived on a farm since I was two years old. My pets just now are two kitties, a dog, a white bunny, and some Belgian hares. —MARION LITTLE, RD 3, Somerville, N. J.

We are glad to have Marion as a member. Let's have more letters for our June boys and girls page.

Prize-Winning Barrow

I AM a vocational student of Mildred, and my champion barrow. I have been in 4-H Club work six years and have carried pigs as my main project the entire time. In 1929 my gilt (Blossom) was selected to be shown at the New

York State Fair in Syracuse where she won first prize. Again in 1930 I had the opportunity to exhibit my pen of three borrows. I enjoyed fitting and showing them. Pig raising requires considerable time and labor. However, I continue to enjoy the work and have gained much practical knowledge.

I feel well rewarded for the extra care that I have given them this year

Robert Snyder and his prize-winning barrow.

as when they were exhibited one of the pen was placed champion over all breeds which entitled me to a trip to the International Livestock Exposition held in Chicago. I met our extension instructor, Mr. H. A. Willman of Ithaca in Syracuse November 27, and we started on the trip which proved to be the best week I have ever spent.

In 4-H work we have to take some disappointments but if we stick to it and work hard year after year, we will succeed in making the best better.

It certainly gives you a thrill to be surprised at hearing your name called and walking up to receive even the second ribbon at the final 4-H banquet which is held in the new boys and girls 4-H building on the Fair Grounds. —ROBERT G. SNYDER, Worcester, N. Y.

Try These On Each Other

(Answer Any Ten)

1. What common vegetable needs no advertising because it always advertises its own presence?
2. What vegetable wears a name that sounds as if it were a flower?
3. Which vegetable was formerly called the "love apple"?
4. Name one vegetable which clings to its German name, even in this country.
5. Which one still uses its Italian name in this country?
6. What leafy vegetable do children, even babies, need for its iron?
7. Name the sourest vegetable of your acquaintance.
8. Name one that sounds like a pain in the throat.
9. What is just about the most useful leafy vegetable, being used raw or cooked, summer and winter?
10. Name the vegetable which is the tip of the stalk.
11. What is the stalk vegetable most used (raw) for Sunday dinner?

(You will find the Answers on Page 6)...

Who's Coming

Hark, there's a bell in the distance,
Must be a one horse-sleigh;
Everyone is gaping
And stretching their necks this way.

The peals become louder and louder,
Everyone in the crowd
Is terribly expectant—
The peals are very loud.

But here I must say to you all, friends,
That a little one-horse sleigh
Is a thing that's very uncommon,
In this advanced day.

Hark! the bells are here, friends,
Must be very small,
For the sound of the bells a-ringing
Is not from the ground very tall.

A mighty cheer arises,
For around the curve they see
A dainty lamb a-drawing—
Who do you 'spose? 'Twas me!

Seated in state on the sled, friends,
I drove my little pet
Off and away to the village,
Some supplies at the store to get.

And if any wish to see her,
My own little darling sheep—
Why, come right over to Southbury,
And you may have a peep!

—RUTH M. PERRY, Southbury, Conn.

Here is Ruth Perry of Southbury, Connecticut, who trained her lamb to draw her and the cart. The picture is presented as evidence that the poem on this page, "Who's Coming!", is based on fact rather than on fiction.

With the A. A. Fruit Grower

Fighting the Codling Moth

FOR many months the writer has been carefully watching a new method of attacking one of the most serious orchard pests that is found in New Jersey, or the United States for that matter—the codling moth. It is claimed by eminent orchardists that the codling moth is causing as much injury to apples as any other insect on any fruit crop. They claim that the codling moth is costing the fruit growers in the county where this work is being carried out over \$100,000 annually.

A Gloucester County grower has been experimenting with a new oil for killing the codling moth. This product is painted or sprayed on the trunk, the lower limbs and in any crevices where the moths may be hibernating or passing the larval stage. It has been proven conclusively that as many as one hundred adult moths may be hiding under the bark of a mature apple tree, only awaiting the first sign of the fruit blossoms or the tiny green apples to sail forth and begin to injure the fruit.

It has been the opinion of Albert Repp of Glassboro, that these moths could be killed with an oil painted on the bark. For many months he has been experimenting with this oil and from present indications he has found a practical method for killing 100 per cent of the moths if the oil has been properly and thoroughly applied.

Will It Injure Trees?

Observations in the Repp orchard show that trees painted with the oil several months ago are practically free from live moths that are hibernating through the winter, while adjoining trees that have not been treated with the oil are sheltering from fifty to one hundred live moths. To convince the writer that the moths on the painted trees are dead, the particles of bark containing the moths from various trees were taken into the office and placed near a register. Within a short time the moths from the un-painted trees began to crawl from their winter quarters while those from the oiled tree failed to show any sign of life.

The only question remaining to be solved deals with the effect of the oil on the tree. Observations show that the bark is uninjured in any way by the oil. In explaining the results of his experiments, Mr. Repp stated that his warning to fruit growers would be to not apply the oil when the weather was freezing as the oil would not spread out thin enough and there might be some injury from an over-dose. To find if the oil was injurious to tender bark and foliage, last September the writer was shown a field of string beans that had been sprayed with the oil. It is a well known fact that bean leaves are one of the most tender of all foliages. When shown the field it was impossible to determine which plot had been treated.

This new method of handling the codling moth has started no end of talk among apple growers. Many have been examining the Repp orchards to learn for themselves the merits of the oil. As a result of these observations, several stopped scraping their trees, planning to use the oil method in the early spring when the weather is right.

Some of the orchardists who have been in the experimental orchard state that it takes about one half as long to paint a tree as it does to scrape the trunk, and then they do not get all of the moths.

Ten Commandments for Planting Shrubs

ACCORDING to Professor C. J. Hunn of the New York State College of Agriculture, the planter of shrubs and trees should follow the following Ten Commandments.

1. Do not expose the roots of shrubs to the sun, drying winds or frost.

2. Do not cramp the roots when planting but make the hole in the soil large enough so that all the roots may be spread out in a natural position.

3. Pay particular attention to drainage conditions in the heavier clay soils. Sandy, gravelly soils usually have ample drainage.

4. Good garden soil is ideal to fill around newly planted shrubs.

5. Do not plant too deeply. Air is necessary to maintain a good root growth.

6. Work the soil around the roots carefully, then tamp well with a heel or end of a shovel.

7. Shrubs bloom on new wood cut back from top to rejuvenate the old shrub.

8. Water immediately.

9. Keep down the weeds.

10. The final Commandment is the future care of the shrubbery. Shrubs will need mulching in the autumn with leaves or other litter. Most shrubs do not need much fertilizer. Proper pruning and plant disease control practice should be followed and by curtailing undesirable plant growth, the good health of the shrubs will be maintained.

Package Bees

Have package bees from the South been found to be as satisfactory for pollinating orchards as full colonies from local bee keepers?

FROM various experiments it is apparent that the well kept colony is very much superior to the package bees. The package bees do not ordinarily come early enough to become established and ready to work as early as the winter colonies from the previous year and naturally will not do pollination work as well in the orchard.

Pruning Currants and Gooseberries

Should I prune my currant and gooseberry bushes each year or is it all right to let them grow naturally?

IT is certainly advisable to prune currant and gooseberry bushes each year, cutting out about one-third of the oldest wood each time. Fruit is borne on all wood except the first wood growth, while the best fruit is borne on wood 2 and 3 years of age. Older canes produce an inferior quality product. The pruning of all canes over 2 years old will give the younger ones more nourishment and a larger crop of fruit will be obtained. If a nice shoot is sprouting from an old cane near the crown, the cane should be pruned just above the shoot.

Easy and Cheaper to Erect

Easy, because any handy man and a boy can quickly erect a Unadilla Silo.... Cheaper, because its few simple parts are fully assembled at the factory. Roof boards are accurately cut and fitted. Door front and doors are all assembled and ready to put into place; there's no sawing, guessing or fitting. In the end, your Unadilla costs less erected in place, than many silos on which you're quoted a cheap price. Order now. Discount for cash and early orders. Ask for free catalog—and literature on tubs, tanks, vats. UNADILLA SILO COMPANY Box B, Unadilla, N. Y.

NEW MOUTH PIECE— ALL-RUBBER

It is easy to produce clean milk with the Burrell—and here is why: (1) Only one tube—sanitary metal with rubber joints; (2) New mouth piece—a single piece of solid rubber. With the A. A. DAIRYMAN

Defends "Returns Above Feed Costs"

FROM the experience which I have gained as a tester for several years I feel that I cannot agree with some dairymen (see page 30 of Jan. 10th issue) who believe that all the costs of the milk which they produce should be calculated. If all these minute factors which enter into the cost of milk production were assigned a definite value and charged against the income, more work would be required of the tester at an added expense. It would be similar to the man who charged himself for the time it took to go to the bank to collect his interest. Of course it is fully realized that we must have some idea of the exact cost of 100 pounds of milk produced but why not leave this to our local agricultural colleges which have the time and money to learn the actual costs.

What all dairymen are primarily interested in is the total production and income above feed costs. Such other costs as building, equipment and cow charges are practically the same from year to year and only comprise a quarter or less of the gross cost.

In Farmer's Bulletin No. 1604 is a tabulation of 100,000 yearly records of dairy cows in the U. S. This shows that cows that produced 100 pounds of fat made an average income of \$14 over cost of feed. At 200 pounds, the income over feed costs was \$54; at 300 lbs. \$96; and at 400 pounds \$138. This is the relative advantage that high production gives. If we have one of these \$14 income cows in our dairy we are not going to cut the costs of bull service, lower our insurance and let the buildings go to rack and ruin simply to make this cow show a profit. That idea is opposed to the spirit of testing. The cows at the bottom of the yearly production summary will fatten the owner's purse if they are simply non-existent the following year.

In 32 N. Y. Dairy Herd Improvement Ass'ns in 1928-29, cows that produced an average of 6000 pounds of milk made an income over feed costs of \$106. Those that produced between 9500-10499 made \$175 over feed costs. A tabulation of all cows showed that as production increased 1000 pounds feed costs rose about \$5 and income \$27 over feed costs. —LEWIS GAY.

Timely Questions About Livestock

(Continued from Page 3)

vent the spread of the caustic potash that is used to prevent the growth. The caustic potash, which may be secured in any drug store, should be kept in a tightly corked bottle when not in use and gloves should be worn when it is applied. Rub the horn button with the potash until a spot about the size of a dime is red but not bloody. Do not use too much, as it may spread and injure the calf. Never turn the calf out into the rain immediately after treatment as the rain may wash the potash into the calf's eyes.

Treating Milk Fever

What should one do with a high producing cow that has milk fever?

Milk fever is a disease which may occur with any cow, following calving, no matter how well she is handled. It seems especially likely to occur with high producers.

Our advice is that it is best to call a veterinary who will give the proper treatment and explain the care that is needed. The modern method of distending the udder with air is very effective and with this treatment few fatalities occur. Milk fever outfits are available for use by every dairyman, but due to danger of infection, it is probably better to have the veterinary do the work. It is a good practice to milk the cow a little two or three times a day during milk fever to make sure that all quarters are milking freely.

Your Herd NEEDS This Fully-Balanced Low-Cost Ration Right Now!

PASTURAGE alone... especially this year when pastures are unusually low in nutriment... will not keep your herd's bodily health or maintain even a normal milk flow. You must also feed a grain ration.

Don't try to get along with a make-shift feed when you can buy B-B Marmico 16%, a fully-balanced ration at no more per ton than you pay for bran or middlings!

B-B Marmico 16% combines economy with perfect mineral balance. This ration will supply your herd with the needed concentrates to maintain bodily vigor and keep up milk production. It is the lowest-priced, safe, fully-balanced ration you can buy. Guaranteed to give satisfaction or money refunded. Let B-B Marmico 16% help you, just as it is helping thousands of other dairymen through this period of low milk prices. Ask your dealer for it today.

CROWS PULL YOUR CORN?

Crow-Fez

TRADE MARK Reg.

Is Guaranteed To Stop Them

You make a double saving by using Crow-Fez—first because Crow-Fez costs you less—much less—and second because treating your seed with Crow-Fez saves you seed losses, and replanting costs, by protecting your seed from crows and other seed destroying birds—it's guaranteed to do the work.

Compare these new Crow-Fez low prices. See what you save!
1/2 Pint Size Treats 1 Bushel Seed \$.60
1 Pint Size Treats 2 Bushels Seed 1.00
1 Quart Size Treats 4 Bushels Seed 1.50

CROW-FEZ GUARANTEE

Crow-Fez is guaranteed to protect seeds against depredations by crows and other birds and to be as fully effective in its action, when used according to directions, as any repellent, regardless of price.

USERS ENDORSE CROW-FEZ:

We have used Crow-Fez this past planting season in treating seed corn planted in a field that was badly infested by crows and pheasants. Results were excellent. Crow-Fez does all that is claimed for it. We lost hardly any seed—germination was good—stand excellent. We will treat our seed again next year with Crow-Fez.

—Samuel Broughton, Farm Supt., Utica State Hospital

If your dealer does not stock Crow-Fez, and will not supply you—write us direct enclosing cash, check or money order, at new low price quoted above—post paid.

Reviewing the Latest Eastern Markets

Milk Prices

May Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk (Metropolitan area)	2.90	2.70
2 Fluid Cream	1.66	
2A Fluid Cream	1.91	
2B Cond. Milk		
3 Soft Cheese	1.50	1.30
4 Evap. Cond. Milk Powder		
Hard Cheese	1.50	1.30
Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for May 1930 was \$3.00 for 3.5% milk and Sheffield's \$2.80 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Lowest in 20 Years

CREAMERY SALTED	May 9, 1931	May 2, 1931	May 10, 1930
Higher than extra	24 -24 1/2	25 -25 1/2	37 -37 1/2
Extra (92 sc.)	23 1/2 -	24 1/2 -	36 1/2 -
84-91 score	21 1/2 -23 1/4	22 -24 1/4	32 -36
Lower Grades	20 -21	20 -21 1/2	31 -31 1/2

Not since 1911 has the butter market reached a level comparable with prices reached during the week ending May 9 this year. Receipts have not been particularly heavy and stock has been moving into distributing channels satisfactorily. With such low prevailing prices this is to be expected. As a matter of fact, there is absolutely no reason for the situation, unless perhaps, tight money. Our cold storage holdings are way short of last year and the into-storage movement is considerably less than it was a year ago. On May 8 the ten cities reported 8,893,000 pounds of butter in storage, whereas at the same time last year they reported 13,528,000 pounds. From May 1 to May 8, cold storage holdings increased 377,000 pounds, whereas during the same period last year, holdings increased 1,486,000 pounds. Just where the trouble lies no one appears willing to hazard a statement. The bears certainly are at work and speculators are not taking hold.

On Monday May 4, the market was steady with creamery extras at 24 1/2 c. On Tuesday, pressure to sell developed and the market lost 1/2 c. On Wednesday the weakness continued along with easier reports from Chicago. On Thursday, the market hit the lowest since 1911 with creamery extras at 22 1/2 c. After hitting that level the market has held fairly steady, and at the close on Saturday fractional advances were asked for inspected goods. There is no telling what will happen next week.

Lower Wisconsin Prices Hurt Cheese Market

STATE FLATS	May 10, 1930	May 2, 1931	May 9, 1931
Fresh Fancy	19 -	13 -15	12-14
Fresh Average			
Held Fancy	24-26	21-22 1/2	21-22 1/2
Held Average	23 -		

Fresh cheese turned lower during the week ending May 9 following a decline on fresh makes in Wisconsin primary markets. There has been a very limited outlet for fresh cheese in New York City for a long time and prices have continually trended downward. On the other hand, old cheese has been holding fairly steady.

Statistically, the market is in good shape but from all appearances, statistics are not worth a fiddle these days. On May 7 the ten cities making daily reports had on hand 10,372,000 pounds of cheese while a year ago they held 11,775,000 pounds, practically one and one half million pounds more. From April 30 to May 7, the ten cities reported a LOSS in storage holdings of 314,000 pounds whereas during the same period last year holdings in the ten cities gained 676,000 pounds.

Eggs Suffer Fractional Reduction

NEARBY WHITE	May 10, 1930	May 2, 1931	May 9, 1931
Hennery	1930	1931	1931
Selected Extras	30-31	22 -23 1/2	22 -23
Average Extras	28-29	21 -21 1/2	20 1/2 -21
Extra Firsts	27-27 1/2	20 -20 1/2	19 1/2 -20
Firsts	26-26 1/2	19 1/2 -	18 -19
Undergrades		-25 1/2	-19 -17 1/2
Pullets			
Pewees			
NEARBY BROWNS			
Hennery	29-30	21 -23 1/2	21 -24
Gathered	26-28	18 -20 1/2	17 1/2 -20 1/4

The egg market suffered the same fate as butter and cheese during the first full week of May. The excuse is given that continued heavy receipts forced the market to work to a lower level. At the same time the Pacific Egg Producers announce that for the four weeks after Easter, consumption has increased 11 per cent. Storage figures show that we are behind last year both in total holdings and into-storage movement. On May 8, the ten cities reported holdings totaling 3,285,000

cases, whereas on the same day last year they reported holdings totaling 3,396,000 cases. From May 1 to May 8, holdings increased 427,000 cases, whereas during the same period last year, holdings increased 460,000 cases. There is something for the statisticians to laugh off. The wholesale trade is throwing up its hands in horror over the fact that the retail trade has not reduced its prices, which is true. Anyone going out to buy strictly fancy fresh eggs classed as closely selected extras will pay anywhere from 30c a dozen up as much as the freight will bear. It is impossible to analyze the market under the present circumstances.

Live Poultry Market Closes Better

	May 9, 1931	May 2, 1931	May 10, 1930
FOWLS			
Colored	23-24	20-23	21-25
Leghorn	-18	-21	23-26

DUCKS, Nearby	18-24	22-24	19-24
GESE	22 -	12-13	-16

The live poultry market opened up during the week ending May 9 in a somewhat unsatisfactory condition. For several days underselling had sapped the life out of the market so on Tuesday a drastic dose was administered and prices cut severely. Many believed that the dose was too severe. On Tuesday, colored fowls sold at 18c to 20c and Leghorns at 17c. However, the desired effect was achieved for a gradual improvement took place and by closing time on Saturday prices were a shade better than they had been the previous week. The market is in good shape on light colored fowls and Leghorns, while heavy colored stock is a shade off. The situation in broilers is still irregular. Qualities have varied widely, only a very small proportion showing first class. In general Leghorns and Red broilers are a shade lower.

Decoration Day is not far off and those who are contemplating unloading a lot of broilers should plan immediately on getting the birds in for a little fitting and grading. When you ship your birds do not mix big ones and little ones, and fancy and poor ones. If you have a half dozen or so poor birds, enjoy fried chicken yourself and get a better price on your good birds in the market.

Vegetables

Local fresh vegetables have started to roll into New York. Asparagus from the Hudson Valley is now on the New York market, bringing \$2 to \$3.50 per dozen bunches for the green and \$1.75 to \$3 per dozen for the white.

Hudson Valley rhubarb is bringing 3c to 5c per bunch, the bulk of the offerings bringing 4c and 4 1/2 c.

Hudson Valley scallions are bringing \$1 to \$1.50 per lettuce crate. This price includes bunching.

Feeds and Grains

FUTURES	May 9, 1931	May 2, 1931	May 10, 1930

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Better Demand for Good Hay

We had a slightly better market for good hay during the week ending May 9. Undergrades, particularly in small bales, had very little attention. The supply in Manhattan was light while Brooklyn had a little more hay to offer. The bulk of the receipts consisted of a fair grade No. 2 down to sample. The market closed steady to firm with Manhattan getting a slightly higher price than Brooklyn. Timothy

ranges all the way from \$21 to \$27, with sample hay at \$16 to \$19. Timothy containing a light mixture of clover has brought anywhere from \$20 to \$25 while grass mixtures brought \$19 to \$23. Oat straw is bringing \$13 per ton with rye at \$19 and wheat at \$12.

Meats and Livestock

CATTLE—Load medium 1322 lb. Pennsylvania steers around 25c lower, \$7.40. Cows steady. Common to medium \$4.00-5.00. Low cutters and cutters \$2.00-3.50.

VEALERS—Scarce, steady. Few choice nearby vealers \$10.00. Small lots medium grades \$7.00.

HOGS—Steady, 170-200 lbs. \$7.75-8.00.

COUNTRY DRESSED CALVES—Receipts were liberal to heavy during the week. Trading was slow all through and carryovers daily. Friday's receipts were again heavy and buying slow. Prices were lower all through. Market closed weak and irregular and not cleaned up. Outlook: lower. Fresh receipts per pound: Choice 10-11c; fair to good 8-10c; small to medium 5-8c.

HOTHOUSE LAMBS—Receipts heavy during the week. Demand very slow. Market weak, and not cleaning up at \$2.00-5.00 each.

LIVE RABBITS—Receipts light to moderate during the week. Demand slow. Market closed steady at 15-22c per pound.

MAPLE SYRUP—Market steady. United States Commercial Standard, graded and filtered per gallon: No. 1, \$2.25-2.35; No. 2, \$1.75-2.25; No. 3, \$1.65-1.75. (Farmers run equivalent to No. 3) Sugar in casks, farmers run 20-25c.

WOOL—New York better better fleece wool, unwashed, fine, per pound: 18-25c; 1/2 blood 18-25c; 3/4 blood 18-22c; 1/4 blood 18-21c; low quarter blood 17-19c; common and braid 16-18c.

Farm News from New York

Fred Freestone, State Grange Master, Appointed on Power Board

BY far the most important and far reaching news of interest to New York State agriculture this week, is the appointment of the State Power Authority by Governor Franklin D. Roosevelt.

The member of the Power Authority who will represent agriculture for New York is the Master of the State Grange, Fred J. Freestone. Thirty thousand farmers representing the rural and farm consumers of power are members of the Grange which Mr. Freestone heads. His membership on the Board should insure New York State agriculture of a competent representation in the development and distribution of the St. Lawrence power program.

Mr. Freestone whose home and farm are at Interlaken, New York, is a member of Governor Roosevelt's Agricultural Advisory Commission and has always been interested in any movement for the betterment of farm conditions. In fulfilling the duties of his office, Mr. Freestone has visited thousands of farmers in New York State, knows them personally, and has their best interests at heart.

Other members of the Power Authority appointed by the Governor were Frank P. Walsh, lawyer, of New York City; Morris Llewellyn Cooke, evaluation expert, of Philadelphia, and DeLos Cosgrove, of Watertown, New York, who has followed the St. Lawrence water power question closely for a number of years.

The organization meeting of the committee will be held in New York City in a week or ten days when a chairman will be selected.

In announcing the appointments,

Governor Roosevelt made the following statement:

"The members of the Power Authority are directed by act of the Legislature to organize for the purpose of improving the St. Lawrence River as an instrumentality of commerce and navigation and developing the hydroelectric power thereof in the interest of the people of this state. The development of this power shall, under the law, be considered particularly for the benefit of the domestic and rural consumers to whom the power can economically be made available. Sale to and use by industry shall be a secondary purpose.

"The Power Authority, to further this policy, is directed to negotiate and carry through, if practicable, a contract or contracts for the sale, transmission and distribution of power and will, in general, seek to follow the plan reported to the Legislature by the commission last winter.

"It is expected that the Power Authority will effect their preliminary organization within the next few weeks."

The Cornaire Bill creating the Power Authority, after passing through several revisions in the Legislature, was signed by Governor Roosevelt last week. The project will be financed by bonds issued by the committee.

Dairy Records by Mail

MORE than 700 New York dairymen from 41 counties are having 9,223 cows tested by the three regional dairy record club laboratories at Middletown, Gowanda, and Ithaca, according to C. G. Bradt, of the New York State College of Agriculture. The

county laboratory in Cortland county has 1189 cows on test. This is a remarkable growth and real service to the dairymen of New York State.

William Hotaling

THE passing of William Hotaling of Kinderhook, New York, will be mourned by fruit growers all over New York State. In fact, we might truthfully say that Mr. Hotaling was one of the pioneers who helped put New York State in its present position as a fruit growing state.

He was a true horticulturist, a close student of all kinds of fruit, although perhaps most expert on apples, and was never too busy to give his time to any move that would help to advance the interests of fruit growers. Mr. Hotaling passed away quietly at his home on April 26.

Buy a Buddy Poppy

THE sale of Buddy poppies is conducted each year by the Veterans of Foreign Wars throughout the entire country during the week of Memorial Day. The money raised by this sale is used for welfare and relief work including an allotment to the Veteran of Foreign Wars National Home for

widows and orphans of ex-service men. The poppies are made by disabled ex-service men who are still capable of this employment. In this way they are able to earn a little for their own maintenance while the funds brought in by the sale of the poppies furnish extra facilities and comforts at the National Home.

The buddy poppy sale is endorsed by the president of the United States, by the president of the general Federation of Women's Clubs, by the president of the American Federation of Labor, by religious leaders, fraternal organizations, business and professional organizations of outstanding prominence. Each genuine buddy poppy has a copy-righted green label attached to it for identification and is the genuine handiwork of disabled and needy ex-service men. Wherever you see these labeled poppies on sale, you may know that the sale is under the auspices of the Veterans of Foreign Wars and the money will be used to aid their project.

Successful farming means that the farmer must intelligently market as well as scientifically produce, his commodities.

New York state has 116 of the 700 juvenile granges in thirty-one states.

New York County Notes

Oswego County—April was changeable the first half, pleasant and cold the week of the 19th to the 25th, then fine and warm. It was 70 to 81 degrees F. for a number of days.

A good deal of seeding was done this week. It was reported that, in the eastern part of the county, snow drifts were three feet deep.

There have been some potatoes planted. The best business is the gas business. Many new stations are being put up. Help is plentiful.

Cows are selling from \$25 to \$75. No hay moving. Most farmers are cutting down on milk production.—F.S.M.

Steuben County—At this writing snow is around four inches deep and still coming. The roads are very muddy now. The town put sods and dirt in the middle of the road and the road is nearly impassable. On some other roads the sods and dirt were left on the side of the road.

Not much farm work done. No oats sown here yet. The season is very late.—D.C.F.

Franklin County—The dates for the Franklin County Fair will be August 24 to 28, this year. The greatest list, probably, of race entries since stake racing became a big feature of the Fair, has been announced for the coming Fair program. The 4-H features of the Fair are to be greater than ever, this year, it has been stated.

Tree planting for the county, under the supervision of R. G. Unger, St. Lawrence University Association Forester, of Malone, is to be started this month. About one hundred thousand white pine transplants are to be set on county-owned land in Waverly and Brandon, in accordance with the Franklin County Board of Supervisors' ten year reforestation plan adopted during the winter. The plan calls for reforestation of county-owned land in two towns yearly, which will provide county-owned forests in all towns within ten years. Work is being carried on under the state-county aid Hewitt law of 1929 by which the state pays half the expenses, and furnishes free trees in establishing a county forest, title remaining in the county, forest managed by the Board of Supervisors and the income to be deposited in county treasury.—Mrs. W. R.

Genesee County—Early peas are up on some farms. Other farmers have had to wait for settled weather and for the land to dry off. Some fields of barley are sowed while other farmers deem it wiser to wait till the ground is warmer.

Calves are selling for 7½¢ a pound. Eggs are from 14 to 19¢ a dozen at local stores.

Young pigs seem to be scarce and are bringing a good price. At \$4 to \$6 apiece now, pork would have to bring a fair price this fall to make any profit.—Mrs. R.E.G.

Saratoga County—Oats are about all in. Everyone says that fields work up very easily this spring. Lots of plowing is being done now. Gardens are slow on account of very cold nights. Not many auctions in this section.

Not as many baby chicks are being raised as usual.

Eggs are twenty cents at local stores. Grass is looking good. Small pigs \$5.—Mrs. L.W.P.

Cattaraugus County—Miss Mildred Hedin, 19 year old Cattaraugus county girl, who is a student at the Teacher's College, Buffalo, has won a trip to Europe this summer. She received first prize for a thesis in the national contest for colleges and normal schools sponsored by the League of Nations. Her subject was "A Review of the Past Six Months, Their Relation to the League of Nations and Suggestions for Presentation to Students."

Richard Chamberlain, 13 year old student of the 8th grade in District 3, Town of Cold Spring, is the champion speller of the county this year, as a result of a contest sponsored by the Buffalo Evening News. Forty-seven schools were represented there being a total of 88 spellers in the finals held recently at Salamanca. Katherine Kervin of St. Mary's parochial school, Olean, won second and Marybell School of the Cattaraugus high school third. Richard will compete with winners from eight western New York counties in Buffalo.

The Home Bureau locals of the county held annual elections of officers the first week of May preparatory to the advisory council meeting to be held in Salamanca on May 20.

At the county wide meeting held recently in Salamanca A. L. Milks was reelected for a term of three years as a director for sub-district A of the Dairymen's League, comprising this county and McKean county in Pennsylvania. Mr. Milks was heard over the air through a Buffalo broadcasting station urging the use of more dairy products last Tuesday.

The county Picnic Committee which sponsors the big field day at the county Fair Grounds on the last Saturday of June, held its first meeting on May 8, at the Farm and Home Bureau office in Salamanca.—M.M.S.

Western New York Notes

AT a notable gathering of nearly four hundred in the Arcade High School auditorium on the evening of April 30, when a testimonial dinner was given Senator John Knight who succeeds Judge John R. Hazel, retired, as Federal Judge. Judge Norton presented to him the judicial robes which he later donned when he took the oath of office in Buffalo on May 4th.

Vegetable Growers Help Write Bulletin

Several Western New York vegetable growers have written from their experience for a new bulletin on vegetables, No. 240, published by the New York State Department of Agriculture and Markets at Albany, New York.

Among others, the bulletin contains the following articles: "Growing Beans", C. S. Degolyer, of Castile; "Lettuce", E. S. Saisselim, of Oswego; "Sweet Corn", Roy Fish, of Warsaw; "Tomatoes", Reverdy Clothier, Silver Creek; "The Celery Industry of New York State" by J. D. Amelle, master farmer of Williamson, New York; and "Growing Melons with Hotkaps," by, W. D. Henry, Eden, New York.

Anyone who would like a copy of this bulletin may obtain one by directing a request to the Department or to American Agriculturist.

A carload of 15,000 pounds of wool has been shipped by members of the Erie-Niagara sheep growers association from Akron to Boston, Mass., where it is expected to be sold at 35 cents a pound. The wool market is much stronger this year, and if the present price holds, another shipment will be made.

Western New York is always well represented when the monthly report of the Dairy Improvement Association is published. Some men prominently mentioned in the March report are George True, Monroe county, Emerson O'Connor and Carl Mastellar of Wayne County, James Young of Allegany county, Alvin Farner of Erie county, G. S. Cowes & Son of Chautauqua county, Louis Marks of Wayne

county, and Lew Fischer of Tioga county.

Thirty-seven Dairy Improvement Associations throughout the state reported the sale of 218 cows during the month of March. This is the right time to get rid of low producers. It takes a better cow to show a profit now than it did when prices were higher.

Two new gas wells are reported in the Dundee Wayne field. This brings a total of producing wells in this section to thirty. We also learn of the organization of the Bigelow Gas Corporation to exploit the mineral resources of the Wayne gas field of Steuben county. Officers of the Bigelow Gas Corporation are: President, G. W. Mills, Sodus, vice-president and secretary, Irving W. Steele, Rochester; treasurer, Victor C. Bassage, Rochester.

The annual meeting of the Eden grape growers association was held recently and officers elected for the year. Forty-eight cars of grapes were sent out last year for which members of the association received \$21,000. Most of them went to Philadelphia.

Twenty-four high school orchestras participated in the Orchestra Day program of the Western New York Music festival at Fredonia. Winners were Class A Jamestown, Class B Silver Creek, Class C Springville.

Sections of Erie County had freezing weather during the blizzard of April 26 to April 28, but fruit buds were not far enough advanced to be injured.

Herbert Smith of Irondequoit, has been selected as one of the 4-H club members to represent New York State at the National 4-H Club camp at Washington, D. C., June 17 to 23.

Reports from Silver Lake in Western New York promise an excellent fishing season this summer. Pickerel have already been caught weighing as high as 10 pounds.

HIS TELEPHONE GETS HIM THE BEST LIVESTOCK PRICES

By TELEPHONING to keep in touch with livestock prices in his vicinity, a farmer living near La Rue, Ohio, disposes of his lambs, sheep and cattle with the greatest possible profit and convenience. Whenever he has livestock to sell, he calls the local manager of the co-operative association in a nearby town and gets all the latest marketing information. On one recent occasion, he telephoned in the morning . . . found that the price was good, and that a shipment was being made that day. By afternoon he had delivered his livestock, made the sale and deposited the check in his bank.

The telephone is also proving more and more helpful in promoting profitable sales of grain, fruit and vegetables through co-operative associations or local markets. It is invaluable in keeping up friendly contacts, making social engagements and summoning help in times of accident or sickness. And it is a most convenient means of ordering farm and household supplies whenever they are needed in a hurry.

The modern farm home has a telephone that serves well, rain or shine.

Sieb's OVERSIZE Chicks

BIG DISCOUNT

5¢

Take advantage of this offer. You may never have another opportunity to buy Sieb's Famous Oversize Chicks at such low prices. They are one quality only, The Best, all from guaranteed purebred flocks of the world's finest bloodlines. They have been bred and cultured for years to grow larger, mature quicker and lay better. With the A. A. POULTRY FARMER

What Will Eggs Bring Next Winter?

THOSE poultrymen who are most inclined to look ahead are beginning to feel that the poultry business is due for a decided improvement in prices next winter. The facts that lead them to this conclusion are about as follows:

While no one knows as yet the actual number of baby chicks that will be raised this spring, it is no secret that hatcheries have not received the number of orders that they filled last year. Poultrymen who are inclined to be pessimistic maintain that not over one-half last year's numbers will be raised, while estimates from the more optimistic range all the way from fifty to ninety per cent of last year's figures. With these facts in mind, it is easy to see that production next winter will be much below the 1930-31 figures.

The storage situation is always of interest. Dealers who stored eggs last spring lost a lot of money. The amount is variously estimated, one figure being \$35,000,000. As a result, dealers are figuring that they must buy eggs at from 18c to 20c this spring before they will be willing to take a chance on storing them. The number of eggs in storage has run consistently ahead or last year's figures, until fairly recently. It is estimated that warehouse holdings on April 1, were 300,000 cases short of last year. It seems that the chances are all that fewer eggs will go into storage this spring and summer than were put in last year. Again looking ahead six months it is evident that eggs cannot be taken out of storage next winter if they are not put in this spring. It would indicate that prices should improve.

A big point about which we can only speculate is demand, which will be affected considerably by the industrial situation. Economists are predicting that we have gone through the worst of the slump and conditions from now on are bound to improve. If this comes to pass there should be a good demand for eggs next winter with a relatively short supply, a situation which ordinarily results in excellent prices.

Feather Pulling

"Could you give me instructions and information concerning my chickens. They are almost three months old and pick their feathers on back and tail. There are no lice of any kind as I just built my houses of new lumber and have them in a lot that hasn't had chickens on for six years or more.—E. E. B., Pa.

IT is not at all uncommon for flocks of chicks to develop the habit of pulling feathers from each others' backs and tails. Many theories have been advanced as to the cause. Probably no one knows exactly why the chicks do this. I believe it is largely a matter of habit. We usually find the habit in flocks where the chicks have been overcrowded in small quarters or where the flock is too large even though the quarters may be roomy. The trouble is usually aggravated by rainy weather. That is, when the chicks are on range they are scattered enough that they do not do much feather pulling, but on a rainy day they will be crowded together in close quarters and out of pure mischief, apparently, start pulling each others feathers.

I know of nothing to suggest more than to give them all the range that you can, and if possible to separate into smaller groups.—L. E. Weaver.

Can You Beat This?

THE fall of 1929 I kept over three then turkeys. From these three I raised 127 turkeys. I sold the most of them for Thanksgiving. They brought \$515.50. After all expenses were taken out I had \$312.08 left clear of all expenses. They were raised entirely on mash.—EARLE L. MITCHELL, Springville, Pa.

Aunt Janet's Counsel Corner

Our Wildflower Friends Have to Be Protected if We Are to Continue to Enjoy Them

ANY flower-lover suffers to see the unfeeling heartlessness which prompts people to tear flowers from plant or tree, only to let them perish. There seems to be something almost savage about the way in which people rush into a field of beautiful flowers, snatching and grabbing the poor plants up by the roots, only to let them wither before they can even be put into water. Oftentimes, when the flowers are gathered, it is known that there will be no

ers, organizations, and individuals to spread everywhere the gospel of preserving the beauties of nature. The following poem, taken from "Wildflower" magazine comes at a very seasonable time:

A Prayer

*"Lord, stay the ruthless hands that tear
From bush and tree
Their flowering heritage; then, satisfied
With brief possession, cast aside.*

*Lord, stay the careless feet that tread
Unthinkingly
On timid flowers, and crush without
regret
The buttercup and violet.*

*Stay, Lord, the ruthless hands that idly
pluck
The blossoms from Thy country-side;
Stay, Lord, the careless feet, that life
To lowly flowers be not denied."*
—ELIZABETH M. BRUEN.

Variety in Hot Breads

WHEN the housewife mixes a batch of baking powder dough she may make not only biscuits but several other delicious dishes, with but the addition of an egg, a little sugar, some peanut butter or other handy ingredient. How this is done is explained by Miss Amanda Rosenquist, assistant professor of home economics at South Dakota State college.

For apple dumplings, Miss Rosenquist recommends using the regular recipe except that a beaten egg should be added to the milk when mixing. Place a fourth of an apple in the center of each dumpling, sprinkle with cinnamon and sugar and bake. Serve hot as a dessert with lemon sauce or cream.

Another toothsome dish can be made by adding one tablespoon of sugar to the dry ingredients and using peanut butter for half of the shortening.

To make warm cinnamon rolls from baking powder biscuit dough Miss Rosenquist says to pat the dough one half inch thick, spread with melted butter and a mixture of one teaspoonful of

cinnamon to one fourth cup of sugar. Roll like a jelly roll and cut into inch pieces. In the bottom of the pan pour melted butter and brown sugar one fourth inch thick. As soon as baked spread the syrup formed of brown sugar and butter.

By using one half graham flour and one-half teaspoonful more of baking powder than for the regular biscuits and adding chopped nuts and two teaspoons of sugar a delightful variation may be secured.

Baking powder biscuits, Miss Rosenquist informs, are the quickest and easiest to make of all quick breads if one acquires the knack of making them. A good biscuit should be light and about twice the size it was before baked. Many people do not mix the dough well

of hard and soft wheat, almost equally good results have been obtained for quick breads.

In mixing batter for muffins stir about one third of a minute, Miss Rosenquist says. The batter should be very lumpy when ready for the pans. If stirred too long it will lose much of the gas given off by the baking powder. Since alum baking powders are slower acting one may stir batter containing this kind four or five strokes more.

Do You Know That—

To give the fish extra seasoning, sprinkle the inside with salt before stuffing.

A small, stiff whisk broom is useful for cleaning asbestos collars of wickless oil stoves. To clean wicks use the forefinger with a piece of tissue paper wrapped around it.

Cheese is an excellent meat substitute because it is rich in protein and fat and contains calcium, phosphorus, and vitamin A.

A little magnet tucked in the sewing basket sometimes aids in a search for lost needles.

Modish Peplum Model

DRESS PATTERN NO. 3101 is the spirit of youth in its freshness and loveliness. Printed voile, organdie, eyelet batiste, dotted swiss, dimity, and handkerchief linen would be dainty and easy to clean. The pattern cuts in sizes 12, 14, 16, 18 and 20 years, 36 and 38-inches bust measure. Size 16 requires 3 3/4 yards of 39-inch material with 11 1/4 yards of binding. PRICE, 15c.

enough, she says. One should not mix the liquid with the dry ingredients and let the dough stand over night, for then the biscuits will be heavy, she advises. Letting them stand cut for about 15 minutes, however, is beneficial when slow acting baking powder is used.

Baking powders which are usually termed alum powders, act slowly, while the tartrate variety are quick acting. Equally good results have been obtained in the State college experimental cookery classes with either kind of baking powder, Miss Rosenquist reports. Phosphate powders are intermediate in their action. Look at the label, she advises, before you mix the dough.

With the three types of flour, bread flour made from hard wheat, pastry flour made from soft wheat, and general purpose flour made from a blend

Slimming Afternoon Frock

DRESS PATTERN NO. 3084 is highly desirable for the all-day type of dress. It is a fortunate choice for those who have to watch their lines because of its slimming effect. The model pictured here is a black and white crepe silk print. Wool crepe, rayon novelties, printed voiles, or chiffon would be charming in this design. The pattern cuts in sizes 36, 38, 40, 42, 44 and 46-inches bust measure. Size 36 requires 4 3/4 yards of 39-inch material with 1/2 yard of 39-inch contrasting. PRICE 15c.

TO ORDER—Write name, address, pattern sizes and numbers clearly and correctly and enclose with correct remittance in stamps. Add 12c for one of the new Summer Catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry Street, Poughkeepsie, N. Y.

QUILTED CRIB SET NUMBERS B5518 AND B5519 comes stamped on white mercerized broadcloth with wide colored broadcloth border already attached. Colored percale patches for applique flowers, padding for quilting and banding for edge are included in the package. May be had in pink or blue border. B5518—cover, \$2.50; B5519 Pillow, 85 cents. Order from Embroidery Department, American Agriculturist, 10 North Cherry Street, Poughkeepsie, N. Y.

possibility of getting them safely into water, but still that does not seem to stop the mad desire to collect the beauties of the country side.

Farm people who understand how long it takes to grow a plant usually know better than to commit such deeds of thoughtlessness and it will take years of education on the part of teach-

The Story Thus Far

Jim Stuart rescues Aurore LeBlond from a drifting canoe in the lake. LeBlond, Aurore's father, searches for her and gets to Stuart's trading post. LeBlond's lieutenant, Paradis, tries to persuade LeBlond that Stuart, in spite of the storm, should have notified them of her rescue. Before they leave, Aurore and Jim arrange a meeting place on an island.

Jim's trading post has lost much of its business to the rival concern, whose local representative is LeBlond. Old Esau, a native in Jim's employ, has a plan to get the business back. Jim goes to the island to get a promised letter from Aurore.

* * *

He had followed her canoe at a distance and, finding her note, had left this. And now LeBlond would not allow her out of his sight—would watch her as a lynx watches a rabbit. Jim Stuart had seen the last of the girl who had filled the living room at Sunset House with laughter—whose departure had left him lonely, vaguely restless, puzzled with himself.

Nice dog in the manger, this Paradis! The head man of LeBlond had only run true to form in spying on the girl who laughed at him. Then the angered Stuart rasped aloud: "Get lead, eh, if I come again? If I could meet Monsieur Paradis here, I'd come to-morrow!"

"Weel to-day do?" From the thick spruce in his rear a voice wheeled Jim in his tracks, as Paradis appeared in the brush back of the canoe, carrying a gun. A few quick steps toward the shore gave LeBlond's man a view of the inside of the canoe. It was empty. Stuart was unarmed. Then, with evident satisfaction, Paradis leered at the man who watched him.

A Trap

"Well, Monsieur Stuart, here ees Paradis!" he taunted. "You have your weesh. What weel the writer of love notes do about eet?"

"You're a pretty specimen of a man, Paradis," said Jim coolly, refusing to take the situation seriously. "You swing a gun on me, then ask me what I intend to do. Drop that gun and come down here on the beach, if you're not afraid, and I'll show you what I'll do about it."

"Ah, he boasts," Paradis grinned in derision.

"Well, there's only one way to call a bluff," drawled Jim, studying the bloodshot eyes and flushed face of the man he had knocked off the trail at the Medicine Stone portage and insulted at Sunset House. "You hold the cards. It's your play."

"Yes, it ees my play." As Paradis bent with laughter, Jim edged a yard nearer. "But I have not made up my mind weder to shoot you for de insult you give me—or take you to Louis LeBlond and let you taste de sting of Black Jules's dog-whip."

At the fantastic threat the hard-thinking Stuart grinned in derision, but the situation was not humorous. Was this wild-eyed Paradis, fingering the trigger of his rifle, fifteen feet away, unbalanced over the girl—or drunk? Either condition was equally dangerous with that gun.

"Shoot me, eh?" Jim scoffed, sliding

a moccasin a foot nearer the man who covered him. "You'd hang, if my man, Omar, didn't get you first, and they'd run the North-West Trading Company out of the bush." Then an idea flashed through his active brain as the inflamed eyes of Paradis glared at him. "Take me to LeBlond. It's his daughter. Let him settle it."

"I settle my own affair." The face of Paradis was distorted with passion. Slowly he brought the rifle to his shoulder.

Stuart's heart started with a leap. The man was crazed! He would shoot! With a desperate bound Jim strained to reach the madman—to deflect his aim; but fell, sprawled in low brush far short of his goal, as Paradis backed away, his gun still covering his enemy.

"Ah!" chuckled the other, "that was worth de blow in de face at Medicine Stone—to see you jump like a frog."

Jim got to his feet, his eyes on the grimacing face behind the rifle barrel. The mad Paradis was playing with him as a fox plays with a wood-mouse; but how long would it last? He must get closer—risk being hit, to get that gun. But how?

Will Paradis Shoot?

Lowering the rifle, Paradis said with a chuckle: "Now that I have made you jump, I weel make a leetle hole through your heart, Monsieur Jeem Stuart." Then he raised the rifle and took deliberate aim.

The leveled gun was yards away, with low bush between. It was hopeless. If he rushed, Paradis couldn't miss him. Then, sucking in a deep breath, Jim deliberately folded his arms over his chest, and taking a desperate chance, challenged: "All right, I'm ready! Now—right through the heart!"

For a space the black tube covered the chest of the man whose eyes did not waver. But the tensed forearms on Jim's ribs rose and fell with the pounding of his heart.

"Your arm is een de way. De shot weel not be a clean one," muttered the man whose finger slowly curled on the trigger.

Jim Stuart's straight gaze held the grimacing face behind the black tube sighted on his laboring heart, but doubt slowly chilled him. Had he misjudged his man? Did Paradis, after all, intend to murder him? Slowly, under the strain, the sweat broke from his forehead. Better to take the chances of a rush than to be shot like a spy against a wall. Then, as Jim stiffened for a headlong leap, with a laugh Paradis dropped his gun butt.

"Now we go an' see Louis LeBlond."

Jim let the breath out of his lungs. It had seemed minutes while he looked into that gun muzzle. It had taken all the nerve he had. But it had worked—that trick; or was Paradis merely baiting him? His fingers bit into the hard palms of his hands with his desire to reach his leering enemy.

"Get into your boat! Take de stern and paddle! If you move, I shoot you for sure!" ordered Paradis.

Jim did as he was told. Facing him, with the gun in his hands, Paradis squatted in the bow of the boat, and they started along the shallows of the shore.

"You think you are luckee I deed not shoot you, Monsieur Stuart of de

Hudson's Bay; but when Louis LeBlond hear you come to meet hees daughter—den you weesh I shoot. Dat beeg dog-whip of Jules—ah! I can hear it seeng now. Crack! She go on your back!"

Jim Does Some Figuring

The threats of Paradis fell on deaf ears. Jim was not worrying over LeBlond. But he did not relish the humiliation of being brought into the post by the unbalanced Paradis. He pictured the mirth in the eyes of Aurore LeBlond. But as for the jealous and demented Paradis, he almost pitied him. There would be no mercy when she learned how he had spied upon her movements. And LeBlond? She'd laugh at him, as she did that night at Sunset House.

Beyond the island of the split rock, across a half mile of quiet water, lay another and larger one. As Jim paddled leisurely, ignoring the abuse of the man squatted in the bow, holding his rifle, he wondered whether this strait was visible from LeBlond's place on the mainland.

"Does your majesty desire to pass

Smoke.

between the islands?" he broke in on the muttering of Paradis.

"Yes, turn een here," answered the other.

"How far is it?"

"You've been sneaking 'round dese island for de last t'ree days; you ought to know," sneered the man in the bow.

"But I don't. I've never passed inside the islands—always followed the north shore." And, leaving the island, Jim pushed the canoe briskly out into the deep water of the strait.

"You didn't tell me how far your place is from here," Stuart persisted with a guileless smile, as the water began to boil behind his paddle.

"T're-four mile. Not far. Don't hurry. Louis LeBlond, he weel soon enough teach you to come sneaking 'round de south shore for de love lettair." Paradis laughed uproariously.

Then, as the man in the bow lurched forward and jerked himself to an upright position, Jim suddenly realized that he was not mad, but drunk.

On his knees, Stuart rapidly drove the light birch-bark out into the strait with his brisk stroke. To the south the timbered shore of the mainland lay unbroke by the post clearing. From LeBlond's the canoe could not be seen!

Then the maple paddle lunged at the water. It returned on the recover for a new stroke, but the hands which grasped it, dropped it and seized the gunwales of the boat. With a lurch of his heavy body, Jim rolled the light canoe over as he plunged into the lake.

As the speeding canoe capsized, with acry the surprised Paradis slid headlong into the water as his rifle exploded. Rising beyond reach of the boat, for an instant he beat the water desperately; then sank. As he rose again to the surface, coughing from swallowed water, Stuart gripped his

collar to push the floundering Paradis to the boat; but, frantic with fear, the drowning man flung himself at Jim's neck.

Holding the struggling Paradis away with a stiff left arm, Jim sucked in a deep breath and sank beneath the surface; then, as he rose, struck the gasping man fiercely in the face. The fingers which clutched Stuart's shirt relaxed, and he pushed the half-conscious trader to the boat floating bottom up.

The Tables Are Turned

"Now, can you hear that dog-whip sing?" he laughed. But the man Jim held beside the overturned canoe was too busy coughing up water to hear—too frightened to answer.

After much exertion Jim got the limp Paradis across the bottom of the overturned boat, recovered his floating paddle, which he wedged under the stern; and started the slow ordeal of pushing the canoe to the shore.

"You're a clever man with the Indians, Paradis, but there're some tricks you don't know," taunted Jim, as he swam beside the boat. "Look out! You'll roll into the lake if you move!" he warned, as the dazed passenger lifted a livid face to the man in the water.

At last they reached the shore, and wading to the beach with the man who had ambushed him, Jim dropped him none too tenderly. Then freeing his boat of water, he turned to Paradis who was slowly recovering from his immersion.

"Now, what are you going to tell LeBlond, when you can walk and are able to find your boat which you have hidden somewhere on this shore?" he asked of the hiccupping Paradis propped on his elbow, his red eyes picturing his fear of what awaited him at the hands of the Hudson's Bay man.

Paradis weakly shook his head.

"You deserve a good north country beating, my friend, for throwing that gun on me. You might have pulled that trigger. But for spying on Miss Aurore, you deserve—I'll take this." Stuart suddenly bent over the shivering Paradis, who shrank from the blow he anticipated, and jerked a knife from its sheath on the other's belt. "Yes," Jim went on, "you deserve getting this between your ribs for following her out here, and I'm goin' to let you have it." With a black scowl Jim drew back the skinning knife and thrust savagely at the helpless man at his feet. The mottled face of Paradis went white, as he shrank from the blow. But the shining blade stopped inches from his ribs.

"How d'yuh like that, my brave beauty? Not so nice when the other man has the whip hand, eh?"

"Don't! Don't!" whimpered the man on the beach, too weak to move. "I on-lee play wid you—I nevaire shoot!"

"Well, the least I can do is to cut a birch whip and give you what you promised I'd get."

But Stuart had had enough of this head man of LeBlond's. The yellowness of spirit of the one who, an hour before, had held a rifle on his heart, disgusted him. And across the lake Omar was waiting.

"Just remember one thing, Paradis," he said, "when you lie about what happened this morning—I didn't let you drown when I had good reason to. From now on, between you and me there'll be war. You've started to put me out of business—you and LeBlond; but before you're through you'll know you've been in a fight. Now go back and tell them a cock-and-bull yarn about what happened to you!"

Turning from the surprised Paradis, Jim stepped into his boat and started for Sunset House. As he passed the split rock, he suddenly swung the canoe with a sweep of his paddle and

Under Frozen Stars

(Continued from Page 13)

started furiously back up the shore. Her note? Paradis must have it in his pocket. It could be dried and read.

But when Jim reached the strip of beach where he had left his man, it was empty.

CHAPTER VI

THAT AFTERNOON, on the shore at Sunset House, Omar sat pulling gloomily at his pipe beside the loaded and waiting Peterboro. Back and forth from trade-house to lake shore Smoke fretted over the absence of the master who seldom left the post without taking the leader of his dog-team for company. At last, the uneasy husky trotted up to the moody half-breed and, squatting on his haunches, lifted his nose in guttural protest. But, ignoring the dog, Boisvert's squinting eyes scanned the wide reaches of the still lake for a sign of Jim's canoe.

"He go for to see dat woman," he muttered, with an ominous shake of his black head, as he cut a pipeful from a plug of Company nigger-head. Then he turned with a scowl at the sound of Sarah's shrill voice.

"W'ere ees Meester Jeem?"

As he glanced around at her Omar's swart features slowly expanded in a smile. Sarah's coal-black head was resplendent in a crimson scarf.

"Why you laugh?" she demanded angrily, her black eyes snapping at Omar's mouth widened into a leer.

He liked to bait the fiery Sarah. "You look lak' de sky w'en de sun set. Marthe, she see you?"

The thick-set Sarah wrathfully stamped her moccasined foot on a pebble, and as quickly lifted it with a grunted, "Io!" of pain. "W'ere ees he? You not go to Lak' Expanse?" she snapped, ignoring the allusion to her scarf.

"Ah-hah, we go!" replied the amused Omar, refusing to share his suspicions with the inquisitive Ojibwa, who had evidently been won over by Aurore's gift. "She geeve you dat? You lak dat crazee girl of LeBlond?"

Tossing her gaudy head, the self-conscious Sarah turned away as she proudly threw over her shoulder: "Eet

tak' manee mink skin to buy dis seelk shawl." And she rolled away on her bowed legs to Omar's cabin that Marthe and the children might view with admiration and envy her head-dress of crimson silk.

With a shrug of his heavy shoulders at the fickleness of women, Omar resumed his vigil by the lake. In mid-afternoon Jim's birch-bark slid in to the shore.

"Well, I'm late," said Stuart, stepping out and turning the boat over on the beach.

The slit-like eyes in Omar's stolid face examined Jim from forehead, wet with sweat, to moccasins. Then, through the pipe in his teeth, the half-breed blew a cloud of smoke as he drily announced:

"You get een de lak."

"Can't fool those hawk eyes of yours, can I?" Jim laughed. "Yes, I rolled over on a round rock. I was asleep, I guess . . . Hello, Smoke old boy!" The Ungava bounded up to the master he had missed, and leaped upon him with rough caresses.

Omar rose, spat, and went to the birch-bark. Shortly he turned with a grimace to his guilty chief. "You no good for a liar. Dis cano' nevair scrape no rock."

"You're right, Omar—might have known I couldn't fool you. I'll tell you about it when we make camp tonight."

Leaving Esau in charge of the post, planning his coming campaign in the Pipestone country, Stuart and Omar, with Smoke running the near shore, paddled late into the June twilight. Should he ever see her again, Jim wondered. It would be August when he returned from Lake Expanse, and then they must start north with Esau. When they returned from the summer camps of the Pipestone Ojibwas, she would be gone. And now, when Paradis told his story, LeBlond would have her watched—followed. There would be no message at the split rock—not even a good-bye.

(Continued Next Week)

With the spring rush beginning, the time spent in planning tomorrow's work is doubly valuable—but of course just planning alone won't get the work done.

HANDY ANDY Says "Here's How" To Fix the Furnace for Summer By Ray Inman

UNLESS YOU:
Remove all furnace pipes, brush out insides with long wire brush and paint with linseed oil.
Clean and blacken the outsides.

Clean ashes and soot from smoke passages and radiators. Brush firebox surfaces with stiff broom or wire brush.

Remove ashes and cinders from grates & ashpits. Remove, empty and scrape moisture pan. Heaters should be cleaned, blacked well and stored in a dry place. I.W.D.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

Fake Eye Doctors Active Again

A RECENT New Jersey paper carried a story on a fake eye doctor with a New York State license who has been picking up some easy money. The A. A. Service Bureau has had several letters from New York State subscribers stating that a man has been in their vicinity claiming to be an eye doctor.

This is an old game. The usual victims are old persons. The "doctor" drops in, says that the person soon will go blind, and claims to remove something from the eye, to prevent this blindness. These fake eye doctors work fast and visit only one or two people in a neighborhood, then quickly go to another section.

If such a man calls on you or if you hear of anyone answering this description in your neighborhood, communicate immediately with the State Police.

Get a Report First

Recently an agent came along taking orders for suits. My son gave him an order and paid a deposit. We have heard nothing from him and letters written to the address he gave have not been answered.

THERE are a number of reliable manufacturers of clothes that send agents out on the road. There are also a number of concerns who follow this method who do not give satisfaction to our readers. We suggest that you check on them before you order. Some of them do not deal fairly, either failing to send any clothes at all, or sending cheap, ill-fitting suits that are not satisfactory. When these are returned by the customer they have all sorts of difficulty in getting any satisfactory settlement. The company usually insists on its right to make a second try which is usually no more satisfactory than the first. We will be glad to check for our subscribers on the reliability of any firm before they order.

Boys Get Help

SEVERAL weeks ago we printed a very short notice to the effect that a veterinarian would be interested in learning of a worthy young man who needed help through a veterinary college. We relieved a flood of letters in answer to this notice all of which were forwarded to the originator of the offer.

Today we have a letter from this veterinarian thanking us for printing the notice and saying that after studying all of the letters which we forwarded to him, that he had selected not one, but two young men who wanted to attend a veterinary college with the intention of giving them some assistance.

We are always more than glad to help any young person to get a better training for his work. This doctor regrets that he was not able, because of the number of letters received, to send a personal answer to all of them. For obvious reasons, we are not printing either the name of the veterinarian or of the two boys.

No Work Yet At Boulder Dam

WE still continue to get inquiries about employment at Hoover Dam, sometimes known also as the Boulder Dam project. Regardless of frequent warnings that have been issued, large numbers of men have gone to Las Vegas in the hope of getting work. There are still a lot of unemployed men there with no means of making a living. No one should go there unless he is sure of employment on arrival, or without enough money to tide him over a period of unemployment.

The United States Employment Service has established a public employment service at Las Vegas, Nevada,

with Leonard T. Blood in charge. All other work at Boulder Dam will be let by the Government to contractors who will hire their own men.

All Government positions will be under Civil Service. A letter addressed to the Bureau of Reclamation, Department of the Interior, will give you a list of Civil Service positions and the locations of the examinations for them. It is, of course, useless for anyone to attempt a Civil Service examination unless they are an expert along some particular line.

Difference Between Commission Men and Direct Buyers

I shipped five cases of eggs to a firm advertised in your paper. They returned a check taking off \$1.70 for commission. We have been sending eggs to many different companies in New York for years and have never had commission taken off before. What can you do for us in this case?

THE firm our subscriber referred to was a licensed and bonded commission firm with an excellent reputation. Evidently from our subscriber's letter he has been shipping in the past to direct receivers. That is, men who buy the eggs and then sell them for the best price they can get. Many men who are direct buyers of eggs have an excellent financial standing. As the same time there are some who buy direct who do not enjoy good reputations on the market.

A licensed and bonded commission man does not ever own the eggs which the poultrymen ship to him. They merely act as the agent and their pay comes from the commission they charge. A commissionman in New York State must be licensed by the State Department of Agriculture and Markets and take out a bond for the protection of the shippers. Direct buyers, that is men who buy stuff for so much and pay for it, are not required by the State Department of Agriculture and Markets to take out a bond or to take out a license. It is only fair to say that some commission men enjoy much better moral reputations and have a much heavier financial responsibility than others. We are explaining this situation because there appears to be so much misunderstanding on the part of our readers. Every reader who ships to New York should know whether he is shipping to a licensed and bonded commission man or whether he is shipping to a direct buyer and should also know something about the financial responsibility no matter to whom he ships.

No Jobs

I heard last fall that some people that own oil wells in South America want to hire men to drive trucks. I have forgotten the address. Could you give it to me?

WE believe our subscriber has seen advertisements of people who claim to have jobs in South America. The catch in the proposition is that these people want a dollar or two before they will give out the imaginary job. The answer, of course, is that there are no jobs and that the people who are back of the advertisement are interested only in the money that they get as advance fees.

Avoid Sending Cash

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

For 25 Years—and More!

There are Craine Triple Wall Silos erected and in use for 25 years and more. To get such long service from a Silo, there must be first quality materials, careful workmanship, skilled erecting—and proper care. We furnish the first two or three; you furnish the care. Right now the Craine Line consists of

Participating Policies On Automobile Insurance Are Popular With New York State Farmers

OUR net premiums last year increased 33½% over 1929. Farmers appreciate their opportunity to buy *Automobile Insurance on a profit-sharing basis*. This participating plan appeals to them strongly, probably because so many are members of cooperative organizations.

We allow 10% off "conference manual" rates as outright deduction when premium is paid. This is \$3.00 to \$10.00, depending on make and size of car or truck.

Also 10% additional deduction where policyholder has had no automobile accident during past 24 months.

This is a New York State Company, with Home Office in Buffalo, with Claims Service Branches throughout State, and claims representatives from coast to coast.

**GUARDIAN CASUALTY
COMPANY**

Owen B. Augspurger, President.

HOME OFFICE: BUFFALO, N. Y.

Write for rates and exact savings on your car and truck. Ask for Agency Proposition, if you think you would like to represent the "GUARDIAN." You may be in a good territory which is still open.

This tractor, fueled with Socony Special *plus* Ethyl, is pulling a five-foot cover double-crop disk harrow, 22-inch blade, penetrating seven inches deep. It cuts up and mixes about four tons of green manure into each acre.

SOCONY-fueled Tractor-harrow *disks a cover crop quickly*

ONE disking with this tractor-powered harrow fueled with Socony Special Gasoline *plus* Ethyl  stops a cover crop of peas from sapping moisture. In record time the crop is completely covered by a cross disking.

Like many another farmer in New York and New England, this farmer has found that he gets the most economical power from Special *plus* Ethyl. You, too, will find that this gasoline makes your tractor perform better and do more work than any other gasoline.

Socony also makes many other products which you will find useful on your farm. These include:

Socony Herd Oil, the best cow spray science has produced, insures contented cattle. One application protects cows all day long against barn and stable flies, and prevents irritation and annoyance at milking time. It is tasteless, odorless, easy and pleasant to apply. It will not contaminate milk.

The New Socony Motor Oil, a 100% paraffine base, dewaxed oil, does not break down, regardless of engine heat. It has additional lubricating value and insures less wear on your engine.

Socony Turex Oil, made to lubricate Diesel and other internal combustion engines, and for special lubrication of all machinery where a truly high-grade, long-life lubricating oil is essential.

How many of these Socony products, made especially for the farm, are working for you?

Leather Dressing . . . Mica Axle Grease . . . Socony Disinfectant . . . Parowax . . . Tree Spraying Oils . . . Socony Lubricote (Household) Oil . . . Socony Kerosene . . . Socony Auto Radiator Cleaner.

SHRINES OF AMERICA

To U. S. Grant

At a time when northern ears were filled with dolorous sounds of defeat, up the Ohio river floated a noise like the popping of firecrackers. When the smoke cleared Paducah, Ft. Henry and Ft. Donelson were in the bag of an obscure general named Grant; so were public favor and military ascendancy. In spite of jealousy and political intrigue he became commander of the army, eventual victor of the Civil War, inevitable President of the United States. "Nothing but immediate and unconditional surrender will be accepted." "I propose to fight it out on this line if it takes all summer;" brief and sharp as the click of boot heels, these two statements are a consummate portrait of General Grant. Said Lincoln: "I can't spare this man—he fights." The pictures show Grant's Galena, Ill., home and his tomb in New York City.

Efficiency for the Dairy

TURN the tiresome, tedious job of hand milking over to the new *McCormick-Deering Milker* to get the greatest possible quantity of clean milk from your herd at the lowest possible cost.

In every way, the new McCormick-Deering is a machine built for efficiency and lasting service. The patented pump . . . the fully-enclosed, no-oil, no-spring pulsator . . . the sanitary, two-piece teat cup assembly . . . the anti-freeze stall cocks . . . the sanitary, one-piece pail cover, and the many other features—all contribute to make the McCormick-Deering the best to be had in a practical milking machine.

For maximum butter-fat from your milk, with minimum time and effort spent separating, use the famous *McCormick-Deering Ball-Bearing Cream Separator*. It skims closer than any other separator on the market due to a scientifically-designed bowl with an adjustable skimmilk discharge.

You can see the new McCormick-Deering Milker and the Cream Separator at the McCormick-Deering dealer's store near you. For a folder describing both of these modern dairying aids, write to

How To Kill Quack

By One Who Has Done It

THE April 25 issue of AMERICAN AGRICULTURIST asks for experience in eliminating quack without a summer fallow.

I have found it easy to eliminate quack in the regular rotation with practically no extra work, provided that the proper rotation is used. In this case the proper rotation calls for two hoed crops in succession, the second to be potatoes. I always use corn for the first hoed crop and check row it. My practice is to fall plow for corn. In the spring, very early, this land is disced. Then at frequent enough intervals to prevent the quack getting a start it is gone over again. Ten days to two weeks between fittings is about as long as it is safe to leave the field. I plant the corn rather late in order to kill all the quack possible before planting. One will, in this way, get in from five to seven fittings before planting.

When planted (I use a check rower) I cultivate once by the tracks before the corn is up, and usually get in three or four cultivations, at least one of them crossways, afterward. I do not try to cultivate after the corn gets a good start as I think it hurts more than it helps. By this time the only quack in the field is a little in the hills.

After the corn is off, I plow again for potatoes. In the spring I fit again as for the corn but mostly use a wheel cultivator instead of a disc as the sod is rotted and one can pull the quack roots out which is impossible on sod. If the quack is still fairly prevalent, I put in late potatoes and plant them late. This gives one a better chance at the quack. The secret of getting the quack out is to spread the fitting through the spring instead of doing it all at once.

The potato planter leaves a ridge over each row. I cultivate by these before the potatoes come up, and then harrow the ridges off before the potatoes are ready to come up. Several deep cultivations before and after the potatoes are up about finishes the quack. What few spears are left are taken out bodily by the potato digger and shaken clean of soil where the sun kills them in an hour. I have cleaned badly infested fields so there would not be a spear on ten acres.

One year I cleaned a piece with only one hoed crop, but it took extra work. I plowed it with the tractor right after haying, but only four inches deep. I fitted it every time it started to show any green until fall. Then I reseeded it and gave it the usual preparation the next spring for corn. By extra careful cultivation I got the field practically clean but not 100% as with potatoes.

Incidentally, this manner of eradicating quack gives good crops and the grain after the potatoes is always very heavy and the seeding good, so even if there were any quack left it would make little headway.

I have found that many farmers have serious doubts about being able to properly fit quacky ground with a disc and control the quack. They think it necessary to pull out the rootstocks with a spring tooth and burn them. My experience is that on sod the disc is by far the best tool, and my choice is the double disc for both sod and old land. It is unnecessary to get the quack out. Repeated discings at intervals kills it but leaves it in the ground for fertilizer, and it does not clog up the cultivator as it does when prepared with a spring tooth.—A. H. De Graff.

Trees which will grow in dry shady places, are Trees of Heaven, and Honey Locust. Shrubs suited for this location are Witch Hazel, Buckthorn, and Choke Cherry. Medium shrubs for such places are Barberry, Gray-stemmed dogwood, and Five leaved Aralia. Low plants are Pachysandra terminalis, and English Ivy. Some ferns will stand such a dry place. These are Christmas Fern, Evergreen wood fern, Gossamer Fern, and Osmunda claytoniana. Blue and white wood asters and the Day or Plantain Lilies will grow here.

“Animal Monstrosities”

Heavy Production is Not “Natural” and Requires Heavy Feeding

By J. C. NEALE

SOMETIMES the reaction of a non-agriculturist is valuable in giving us a new slant on our own business of farming. Not that the non-agriculturist is capable of looking over a farm, and then saying, offhand, just how it should be run—but certain things which to us have become common-place may strike him so forcibly that his comments give us a new viewpoint. He is not hampered by too-great familiarity with details. He doesn't know what the general practice is for doing this thing or that. Out of his very “green-ness” he may suggest something which is fundamentally sound, but which has escaped us because we are too familiar with the subject to realize its importance.

A few days ago I was talking with a man whose whole experience has been in schools, universities and business offices—save for yearly vacations and occasional week-end visits to the country. He had just returned from one of these week-end visits to an Oxford County farm, and we were discussing live stock and the possible profits to be derived from live stock. In the course of the conversation, he made this observation, which hit me right between the eyes:

“Present-day farm animals—cows, hogs and hens, alike—are absolute monstrosities.”

“Monstrosities?” I echoed. “What do you mean? I don't see how that word applies to them.”

“Yes, monstrosities,” he repeated. “The word fits perfectly. A monstrosity is something which is unnatural in form or structure. As the dictionary puts it—‘deviating greatly from the natural or normal.’ Take a dairy cow, for instance. By

nature she is supposed to produce just enough milk for five or six months after calving to give her calf a fair start in life—possibly 1,000 lbs. a year—but these friends of mine in Oxford County have a herd which averages better than 10,000 pounds per cow per year. Isn't that ‘deviating greatly from the natural or normal?’ That's production ten times greater than normal.”

“It's the same with the hen,” he continued. “The Jungle Fowl of India doesn't lay many eggs—just enough to hatch out a brood of chicks, perhaps 20 to 24 eggs a year. But you tell me of present-day flocks of hens (which are descended from the Jungle Fowl) averaging better than 200 eggs per hen per year, and some individuals laying more than 300 eggs in a year.”

An interruption ended the conversation rather abruptly, but the thoughts which this man expressed are still with me. As I turn them over in my mind, they shed light from a new angle on this business of live stock farming.

We do not think of our present-day animals as “monstrosities.” We think of 10,000-to-20,000 lb. cows, and 200-to-300 egg hens as animals of ideal type—the type we aim to produce. Rightly so. We know, from experience or observation, that these are the animals which yield the greatest profits. Even if we haven't been able as yet to reach production like

(Continued on Page 7)

Ida Clifton's Ethel, a purebred Jersey cow owned by W. D. Howard of Milford, Massachusetts, started the New Year well by completing the highest Jersey records for milk and butterfat production ever made in America in the senior three-year-old class. One of these records had stood unchallenged for fifteen years, the other for five years.

With her milk yield of 18,151 lbs., the equivalent of 8,433 quarts of milk in a year, she surpassed the record of Lass 66th of Hood Farm, a Massachusetts cow whose record was completed in 1915, and with her butterfat yield of 1,030.79 lbs., the equivalent of 1,288 lbs. of butter, she took championship honors from St. Mawes Lad's Pride, an Oregon Jersey cow whose record was finished in 1925.

Farmer - Owned Auction Markets Successful in New Jersey

Add Half Million Dollars to Farmers' Pockets Above Prices in City Markets

By AMOS KIRBY

NEW JERSEY is rapidly becoming auction minded, and a new system of disposing of farm products is solving our growers most perplexing problem. In the new order of events, the buyer is coming out to the farm to buy the products in competition with other distributors and the grower is being saved the expense of shipping to distant markets. Another important advantage of auction marketing is the fact that the grower knows just what he is going to receive for his products before they leave his truck and he can, if he so desires, take the money home in his pocket.

This does not tell all of the story. With the money in his pocket, he also has the satisfaction of knowing that he probably received more money at his local auction block than if he had loaded his products on the train or a motor truck and shipped them to the terminal market and taken a chance on the prevailing prices the next day.

In support of these startling statements, let us take a peep into the actual operations of eight auction markets during the season of 1930. During the shipping season they handled \$1,265,849 worth of fruits, vegetables, and eggs. This is the volume handled solely over the auction block and does not take into consideration another million dollars worth of

farm products that were sold on the farmers curb markets in Camden, Atlantic City, and Trenton. Less than three years ago, New Jersey did not have one auction market.

New Jersey's eight auction markets are located in strategic points, handling those commodities that are produced in the largest amounts. Taking a map of the state, we find at Beverly a market where they handle fruits and vegetables; at Flemington, it is eggs; at Cedarville it is largely vegetables, while at Hammonton it is exclusively fruits. Over in the Toms River section, where eggs are produced in large amounts, they also have an auction market, but it is located in the thickly populated metropolitan area, near Newark.

For an example of complete coverage of a district with auction markets we must turn to Cumberland County. In this growing fruit and vege-

table area, they have developed three auction markets that are efficiently serving the growers, and all apparently making a success of this new method of selling.

Again taking our map, we note a big shipping point at the little town of Rosenhayn. In this section they grow large amounts of pickles, peppers, cucumbers, and a great variety of other small vegetables. Then turning to the Fortesque highway from Bridgeton to the Bay, we find the towns of Cedarville and Newport, and each supporting a successful auction market.

Now let us stop for a minute and see just what one of these markets is doing in the course of a season. We will take Cedarville as an example. We must keep in mind that 1930, was a low price year and as we compare the number of packages sold with the total receipts, we will soon notice that the gross return was small. But so were the prices in terminal markets. Eight major commodities were handled at Cedarville during the year, with sales exceeding \$399,000.00.

From a semi-official report, we have secured the following figures and commodities, which in itself is representative of the other auction blocks.

Commodity	No. of Packages	Gross Receipts
Strawberries	22,824	\$126,767.57
String Beans	92,811	106,276.13
Lima Beans	43,037	88,418.55
Onions	34,712	39,371.17
Peppers	26,155	11,672.30
Lettuce	968	545.61
Peas	4,542	8,386.61
Squash	512	350.94
Carrots	285	197.11
Total	225,846	\$381,985.99

One will note the difference of some \$17,000 between the total

The Dairy Situation

An Editorial for Every Dairyman in the New York Milk Shed

By E. R. EASTMAN

I HAVE just returned from a week spent in the Central West, including a short trip into Wisconsin. Wisconsin competes with New York for first place in the value of its dairy products. In some years, we lead, in others, Wisconsin.

But there is no doubt about which state is in the lead at the present time, for the dairymen of the New York milk shed are far ahead of Wisconsin farmers, or, in fact, any of the dairymen in almost any other state in the Union. And the dairymen of any of these sections, even at the poor prices for butterfat, are in much better shape than other farmers. Look at the South with its ten-cent cotton, or at the great army of wheat farmers of the West, with wheat on the farm selling at less than 50c a bushel.

A friend of mine who is a large Wisconsin dairyman told me that the large majority of Wisconsin farmers were not getting much more than eighty cents a hundred for their milk. In the city of Yonkers, where I live, a few days before starting on the western trip, I bought, for twenty-five cents per pound, a high quality ninety-three score butter made in Minnesota. Figure for yourself what this meant to Minnesota dairymen after manufacturing, handling, and transportation charges had been paid.

I came back to New York State determined to say a few things to our readers about this dairy situation that some may not like. But the AMERICAN AGRICULTURIST has for its fundamental policy the practice of stating the facts, when we can learn what the truth is, even if those facts are at times disagreeable. It is time that the dairymen of the New York milk shed know the real reason why they are getting nearly twice as much for their milk as many farmers in other sections.

One reason, of course, why our prices are so much better here is that we have a great fluid market. But we never got the benefit of this fluid market before the days of organization. Therefore, I state most emphatically that the one chief cause why farmers in this milk shed, both organized and unorganized, have been getting living prices for their milk is the Dairymen's League Cooperative Association. Similarly credit also must be given to other dairy cooperatives such as the New England Milk Producers' Association and the Interstate Association of Philadelphia.

As an independent farm newspaper we have believed it our duty to criticize the Dairymen's League, we hope, constructively, when we felt that it needed it. The League has made a lot of mistakes and is still making them. It still does things with which we are not in entire agreement and we shall continue to point out mistakes. But those matters are details. The main thing to remember is that the League has been selling Class 1 milk for many months now at \$2.90 a hundred pounds, delivered at country plants, at a time when the whole milk marketing situation is pretty nearly in chaos and in the worst shape that it has been in a long generation. There is no blinking the fact, there is no answering the argument that the Dairymen's League organization alone has stabilized the milk market in this milk shed and prevented fluid milk prices from going down, down, down, to the level of the prices for butter and the other dairy by-products.

It is doubtful even if the members of the League organization realize that their organization has quite, if not entirely, paid for its entire cost since it was organized in what it has saved the dairy industry of this milk shed since the present depression began. Look at the problems that have had to be overcome. Not only has consumption steadily and constantly decreased month after month since the hard times in the city began, but on the other hand, dairy production

has constantly increased. The production per day per dairy in this section for League dairies and probably for all other dairies is from twelve to fifteen pounds more than it was a year ago.

Therefore, in the face of increased production and a declining market, in the face of competition from dairymen who ought to be helping, the organization has maintained its fluid price, and by its adjustable pooling plan, which is a workable surplus plan, it has taken care of the greatest surplus of milk ever produced and given everyone of its members a market.

Now, some of you who read this will point to other dealers or independent cooperatives who have paid even better than the League prices in recent months. That is true. But let us be fair. How long, think you, would these dealers have paid these better prices had not the League farmers' organization first established and stabilized the fundamental League price as a basis? All I need to do to prove the point is to refer you, particularly you older men, to the prices for fluid milk that prevailed before the days of organization. I can remember when milk was sold from Father's farm for forty-six cents a hundred pounds—one cent a quart. Make no mistake. Milk dealers are human like the rest of mankind. They pay for milk, whether they buy it from organizations or not, the price they have to pay to maintain their business, and no more.

Remember, also, if you want to be fair, that the reason why some dealers and some independents can pay better than the League prices is that they carry no surplus. Somebody has to carry it, and if the League did not take care of its surplus, then another great stabilizing influence would be removed and all dairymen, both in and out of the organization, would be forced by dealers to lower prices, because of the surplus.

May I remind you, also, of what always happens when a dealer not guarded by organization gets too much milk—more than he can make a profit on. He closes some of his plants or lets go some of his dairymen. What recently happened at Grade-A plants throughout this territory when the dealers found they had too much Grade-A milk? Did they continue to pay Grade-A prices? Not on your life! Dairymen still continued to produce Grade-A milk, but they took Grade-B prices for it.

Have you forgotten what happened in this milk shed during that other great depression just following the World War, when the market went out from under manufactured dairy by-products? Hundreds of plants were closed and thousands of dairymen were thrown completely out of the market. Those farmers who went through that bitter experience know the comfortable feeling of belonging to an organization that insures them a market. Before these hard times are over there may be others in the same class.

These facts are stated now, because of what is happening to the dairy industry in many other sections of this country, and because it is time for all of us interested in the welfare of agriculture to talk straight and think straight.

AMERICAN AGRICULTURIST is not urging farmers to join the Dairymen's League. We do not even know that the League wishes any more members at the present time. We should think that the present responsibility is to take care of the milk of their present membership. But it is as certain as the sun rises in the morning that the only salvation of the dairy industry from the farmers' standpoint is through strong and effective organization, and the stronger and the larger proportion of members that it has, the more effective it will be. Sooner or later dairymen of this milk shed must get together, if they are to survive, into some kind of a workable organization. Whether that organization takes the exact form of the present League or is

changed to meet some objections is of little moment as long as it does the job that must be done.

Should We Worry About Abandoned Farms

THE newspapers are having much to say about the reports of the recent census which show that the United States lost 150,000 farms in the last ten years, with the highest loss in the New England States.

We see nothing in this report to get excited about. A loss in the number of farms does not mean that all are lost to cultivation. Many have been merged or consolidated with adjoining farms and larger tracts are being handled through more and better use of modern farm machinery.

As a matter of fact, although we do not hear so much about it, there are just as many, or more, abandoned factories and manufacturing plants as there are farms. Empty factory buildings can be found in every village and city because it has been found more efficient to combine small operations into large ones. New machinery, either for farm or factory, brings about mergers and consolidations so that even with the lessened number of either farms or manufacturing plants, the total amount of products turned out is bigger than ever.

Of course, there is some real abandonment of farms. There ought to be more. There is land in every section in the United States still under cultivation that cannot be cultivated at a profit. The products from such land, produced at a high cost, add to the surplus. Such land should be growing trees. If you are startled or worried because of the large number of abandoned farms or because of the drift of country boys and girls to the city, think for a moment what you would do if they all stayed in the country and helped to make a still larger surplus.

The one thing that everyone who is interested in rural life, and that should include every citizen no matter where he lives, should make certain of is that the economic and social conditions in the country are good enough to make it possible for the best boys and girls to stay on the farm. The nation will not need so many farmers in the future to supply the food as have been required in the past, but the need to maintain a class of people on the farms with the same rugged, sterling qualities of character, will be greater than ever.

In an Emergency, Use One of These

Readers "from Dan to Beersheba" send "By-Words" and Old Sayings

WE wonder if there is a single community in the New York Milk Shed that does not have its old sayings or "by-words." Perhaps some of you have forgotten that last winter we asked for letters on the interesting old sayings of your neighborhood, or if you did not forget, perhaps you thought that we were never going to print the letters we asked for. Here they are at last!

It is not often that we have such an interesting task as the reading of these letters and selecting those to be printed. Some of our younger readers might wonder why the same "by-words" are common in so many different sections of the state. A considerable proportion of them are apparently of New England origin and came to all parts of the state when settlers came from New England to New York and since that time have been handed down from generation to generation. Others are purely local. They originated through some local happening and the Yankee tendency to pick up and use "by-words" caused them to be adopted until they were used and understood in an entire neighborhood.

Apparently the younger generation is more inclined toward up-to-the-minute slang and there is some danger that these old-time expressions will be lost entirely. Before that happens it would be an interesting and worthwhile task if someone would record their history for future generations.

Well, if we continue talking there will be no room left for the letters, so here they are:

A Few from Vermont

THERE is an endless amount of odd sayings and colloquialisms which are common in our section that may not be heard in others, so I will quote a few for you. Many have their origin from farm life and will explain themselves: "As crooked as a ram's horn", "as busy as a toad under a harrow", "as empty as a dry well", "a one-horse affair", or referring to a miserly person who is "as tight as the bark to a tree!" If caution or advice is given a heedless person it "slides off like water off a duck's back". It "shines like a barn door on a frosty morning", or a sister phrase of "squeaking like a sledrunner on a frosty morning." "Crooked as a railfence" is used to denote a deviation from a straight line or a flaw in character. "As cool as a cucumber" denotes more personal unexcitability than a state of weather. "As stubborn as Hi's nigh ox" might appeal to anyone who ever drove a yoke of oxen. "Sleeping with one eye open" which is a habit of wild animals who are constantly on the alert for ranger and enemies, is applied to a person who is not easily fooled or caught by schemes.

There are other phrases which explain themselves:—"making tracks for home" (going directly homeward), "As slick as a willow whistle", "as quick as a weasel", "as clean as a hound's tooth", "slower than molasses in January", (which may not be understood by these moderns with steam heated kitchenettes instead of a buttery like an ice-box!) "a head as hard as a bullet", for a thick-headed person, and "as slippery as an eel", for one who is untrustworthy.

Our summer friends from other states accuse us in Vermont of always "I guessing" but at least we "do not choose to run" again not in a "week of Sundays."—Katherine B. Mills, Pittsford, Vermont.

Both Odd and Old

I AM sending you a letter with odd sayings in our neighborhood.

"There are as good fish in the sea as has ever been caught." "Out of the frying pan into the fire," (when a person goes from a bad thing to something even worse), "I guess that will take the wind out of his sails," (when a

person gets more than they bargained for). "Where is the pain the worst?" (when a person makes an outcry or sings off key). "From Dan to Beersheba," (meaning a long distance). "Save your breath to cool your porridge," (or in other words, talk less).—Miss Julie L. Mills, Randolph Center, Vermont.

Can You Remember That Far Back?

I AM sending an old one coined before matches were invented. When a neighbor stays only a short time he is sometimes asked, "Are you after fire?"

My little daughter was rather puzzled until I explained that many years ago if the home-fire went out someone must go in haste for coals to start another before breakfast could be cooked or many other tasks done. Naturally, under those circumstances, the caller did not stay long.

Snumshire

MANY years ago, I suppose when our town was young, there lived a man in this particular neighborhood whose by-word was, "I snum."

He is dead now but the place is called Snumshire and even gets into print. It is on the main road to the White Mountains from the South and well worth the tourist's time to stop a while, for it is beautiful here.—Mrs. Leslie G. Fikes, Charlestown, N. H.

"Season's Up"

I SAW your request for old sayings. You might use this one. The saying "Season's up" used to be common in these parts. Have heard my father tell the incident that started it many times. An old chap known as Uncle Amos had a onehorse farm which he worked with his Dolly mare. He also hauled some of the neighbor's milk to the cheese factory. One of his best customers was Uncle William.

One time Uncle Amos got hard up and asked Uncle William to advance pay for the balance of the season, which he did but took much pains to explain that Uncle Amos was to haul the milk just the same. Next morning Uncle Amos and Dolly mare drove

right by. Uncle William took him to task but all he could get out of Uncle Amos was "Season's up William, you and I we even".

—C. M. Crandall, Andover, N. Y.

From West Virginia

YOU asked for a letter on old sayings in your neighborhood. You will have to ask someone older than I to find out who their authors were and their origin. They are as old as the West Virginia hills.

They are solely intended to give a hint in a roundabout way and not to say exactly what you think. It is a language entirely of its own. I would like to know if our sayings are used in other places. These are the ones mostly used here:

"What goes over the devil's back goes under his belly," (meaning that you will reap what you sow).

"What's good for the goose is good for the gander," (meaning equal rights).

"Every tub sits on its own bottom," (meaning you are responsible for your own doings).

"If the shoe fits let him wear it," (meaning if it hit him, let it hit).—Mrs. Z. V. Cales, Box 33, Sandstone, W. Va.

"Tail Goes With the Hide"

A CERTAIN section of our small hamlet goes by the name of "Johnnycake Flat." An esteemed lady who once resided there culminated one of her arguments with her husband by hurling a johnnycake, fresh from the oven, at her unfortunate spouse's head. An elderly gentleman who now lives there is the originator of one of our favorite by-words. Once, in the days of his youth, Mr. P. hired out to help in the sugar orchard of a neighbor, during the sugaring season. As he was conveying two sixteen quart pails, brimming with the golden liquid from the sugarhouse to the farmhouse one day, Mr. P. had the misfortune to slip on the icy path and fall, spilling one precious pailful.

He regained his feet, still with one pailful intact, and surveyed the ruins. Then in disgust, he dashed the remaining sap on the ground, at the same

time relieving his mind by philosophically exclaiming, "Well, tail goes with the hide." After which he returned, filled up both pails and carried a full load this time to the house.

This incident Mr. P. has never been allowed to forget, and, to freshen his memory, his friends frequently use his expression, "tail goes with the hide", to signify their willingness to do a job up brown or fight to the finish.—Mrs. Q. C. Bird, Stockbridge, Vt.

"Right on Tap"

WHEN a man is on time or a little early we call it being "right on tap."

If an animal is listless or sick we call it being "off feed."

If something is out of repair we call it "out of kilter."

If a person does not feel well we say he is "under the weather."

When something won't fit we say it won't "jibe."

If a person is carrying a "lot of sail" we say he is "stepping high, wide, and handsome."—Cleon L. Dunham, Lebanon, N. Y.

"Tin Cints or Nothin"

THERE was an old fellow who used to live about a mile from here. He wasn't the brightest person in the world, but through berry season he used to pick and sell berries for a living. The time I am writing about happened to be blueberry time and he had two large pails of berries, peddling them along the street in Whitehall. A man stopped him and asked if the berries were for sale and he said "yes", and the man said, "I will give you a shilling a quart right through and take all you have." He said, "no, ye won't, nither. Ye'll give me tin cints or nothin."

This happened about forty years ago, but I don't think there are very many in Washington County but what have heard the expression, "Tin cints or nothin".—Fred T. Stiles, Fort Ann, N. Y.

"Fly to the Cathole"

THIS house was built between eighty-five and ninety years ago. In the lower part of our stair door is a circular opening (now boarded over from the other side) and below the door is another that led to the cellar.

In old days these holes, about five inches in diameter, were for the convenience of the cat who thus could range from cellar to garret and keep the house free from rats and mice. I would like to know if there are such holes in any other house now. When a man is beaten in a battle (verbal or other), by his wife, it is a common saying that she made him "fly to the cathole." Perhaps this means that he felt small enough to go through it.—J. M. Porter, Red Creek, N. Y.

Connecticut Heard From

SPEAKING of colloquialisms, I am sure you will be interested in one which is often used in this locality. Here, one who is about to start any work with another person, often says "All ready, Mr. Cady."

Gordon Cady was known for miles around as a fiddler and prompter at dances, and when the dancers were ready, someone always said "All ready, Mr. Cady." Many people visit his grave in Evergreen Cemetery, Central Village, to see his remarkable monument. On one side is a picture of his cow and record of her production, on another his fiddle and bow and under it the words "All ready, Mr. Cady."—Mrs. Jessie R. Wibberley, Canterbury, Conn.

A year's vegetable requirements for one person can be produced in about 800 feet of row in the garden. For the average family of five this would mean about 20 rows 200 feet long, or a little over a quarter of an acre.

The Song of the Lazy Farmer

MY NEIGHBOR says it seems to him a farmer ought to show some vim, and spend his time from morn till night a-doin' all his work up right; he says the trouble with us is we go to town too much, gee whiz, we'd rather be off raisin' hob than home a-sticken' to the job. He says there ain't no other way to make the farmin' business pay than workin' at it all the time, a-milkin' cows or haulin' lime. The man who loafs around is he who cannot pay his notes, by gee, it takes a lot of work and toil to make a profit from the soil.

I s'pose that neighbor has it right, that we should toil till late at night and never take no time for fun, if we would make a lot of mon. Yet other folks take time to play and still git richer day by day, perhaps us farmers work too much a-raisin' wheat and corn and such. I'd say the thing that bothers us is that we raise too much surplus. If we would work a little less

we'd git a better price, I guess, the folks would have to come and buy, the price of products would be high. The world would surely want our stuff if what we raised wasn't quite enough, if we would rest and loaf a bit, lots higher prices we would git, we'd git more money for less toil, instead of wearin' out our soil!

DAIRYLEA

Dried Skim Milk

A Quality Product For Poultry, Calves, Pigs

DAIRYLEA Dried Skim Milk in poultry rations, insures growth and health. Strongly recommended by feeding authorities. The ideal food for growing chicks. Increases egg production and improves hatchability in layers and breeders. Also excellent for calves and pigs.

Manufactured in plants of the Dairymen's League Cooperative Association, Inc. from the same high quality milk that is approved for New York City. Guaranteed by years of careful laboratory analysis and experiment.

Carried by local feed dealers and feed stores. If there is no representative in your town, order direct from New York office.

Packed in 100 lb. bags and 150 lb. Barrels

Fill out coupon and mail today A.A.
Dairymen's League Cooperative Association, Inc.
Room 2140, 11 West 42nd St., New York City

Fruit Prospects Are Good

By M. C. BURRITT,

FRUIT bud development arrested by cold weather last week has come on rapidly during the week just passed (May 3 to 9). Held in check by cold winds off the Lake, a couple of warm days brought them into the pink pre-

M. C. Burritt

blossom spray stage very quickly. This second spray was begun on May 7, and practically finished on the 9th, except for late varieties like Spy and Rome. On the 8th we had a fine warm rain which was repeated again today (the 10th).

The season is almost exactly as far progressed as at the same date last year. On May 11, 1930, I wrote in my journal, "Early apples, pears, and plums are in full bloom, but Twenty Ounce, Baldwin, and Wealthy are in the pink bud stage." Practically the same words would describe the situation today, May 10, 1931. Kieffer pears are in full bloom. Early plum bloom petals are beginning to fall. Prunes and Bartlett pears are opening freely.

Trees Bloom Heavily

Crop prospects based on bloom are substantially as previously stated. Plums and prunes are full. Kieffer pear bloom is not so heavy and more or less scattered. Bartletts are blooming fairly well. In general, the apple bloom will be heavy, especially Baldwins and Greenings. Earlier varieties are also good but spotted somewhat according to how heavy the crop was last year. In my own case Wealthies which bore heavily last year, will be very light; Kings which gave an unusually big yield in 1930 will bloom for about 60 to 70 per cent of last year. But much can happen to blight this prospect in the next ten days. Low temperatures and cold rains could offset much of the good prospect for a fruit crop.

With last year's experiences in hauling water all during the late summer for spraying, watering stock, and even for household use, still fresh in mind, we have this last week laid a water line to the creek and put in a pump and storage tank. The pump in the house cellar pulls water 1200 feet from the creek with a lift of 9 1/2 feet and pushes it 200 feet further to a 300 gallon storage tank on the second floor of the barn. This enables us to keep both house and barn cisterns filled for house and barn uses and to fill the spray tank by gravity with a two-inch pipe in about three minutes. It has operated successfully so far.

A Big Saving in Time

The saving in time in spraying will go far to pay for the line. Except as we have been fortunate to have heavy rains, after the first spray we have had to haul nearly all the water for the succeeding four or five sprays amounting in all to 20,000 to 25,000 gallons, this 1200 feet from the creek. The hauling and pumping with the spray engine took almost as long as the spraying. The result is that the new water supply enables us to put on

practically twice as many tanks in a day as under the old situation. This saving in time is particularly important at this busy time of year.

We considered drilling a deep well but this is expensive, and somewhat uncertain. It also would call for a storage tank and a good pump. Cisterns are also expensive if they are made big enough to provide an adequate supply, and they are entirely dependent on timely rains, which may not be forthcoming. So we decided that the creek was the most reliable and the pipe line not much more expensive. An adequate water supply is of great importance on a farm, and sometimes easy to secure and inexpensive, but under other circumstances difficult and costly.

Spring plowing is well along. Many have finished it. Until the past week the land has been dry and plowing hard in some places. It is doubtful if the soil contains one-half the usual moisture at this time of the year and a liberal amount of rainfall—more than the average—will be necessary for a good season. Early plowing and frequent working may count heavily in getting good yields.—Hilton, N. Y., May 10, 1931.

Spraying Spuds Pays

SURVEYS by the Pennsylvania Potato Grower's Association show that a man cannot afford to raise spuds unless he sprays often and carefully.

Growers spraying for the first time last year, applied spray an average of 9.5 times. Their average yield was 229 bushels. Unsprayed plots in the same section produced 161.2 bushels per acre. The increase for spraying was 42 per cent.

A number of growers of long experience averaged 389 bushels for spraying an average of 12.6 times, while plots treated otherwise the same except that they were unsprayed, yielded only 241 bushels. Careful spraying gave an increase of 61.4 per cent, a difference which will always boost the net income.—Robert A. Jones.

How About Salting Hay?

"We salt our cow hay liberally, when it is put in the mow. It seems to come out of the sweat brighter and fresher. At any rate, the cows find it more palatable. Thus, hay of poorer quality is eaten up practically as clean as the best."—Frank N. Decker.

This comment from actual experience is interesting. We would be glad to hear from others. What has been your experience, if any, with salting hay? How much do you use?

Hydrated Lime for Bordeaux Mixture

Is hydrated lime as good as lump lime for making Bordeaux mixture?

THE Ohio Experiment Station has tried this out for a number of years and reports that hydrated lime is equally as good as lump lime for this purpose.

Sad To Tell

DRIVER in Yellowstone Park: "This beautiful little lake, surrounded by willow trees, is said to be the most secluded lake in the Park. It was named the Bowl of Tears."

Passenger: "Most attractive. But it seems to have no inlet and no outlet. Where does it get its water?"

Driver: "Oh, that's supplied by the weeping willows. Hence, the name."

It's Cured

"Animal Monstrosities"

(Continued from Page 3)

that, we are working toward that end to the best of our ability.

But right here is where that word "monstrosity" strikes home. Such animals are very far from being "natural" or "normal". They are "monstrosities" in the dictionary sense of the word. For generations we have bred and selected them for "increased ability to produce", until now they are no more "natural" than a calf with six legs. But haven't a lot of us stopped right there and failed to realize that we have to match the "un-naturalness" of the animals with "un-naturalness" of treatment? We have purposely developed "monstrosities", and then a lot of us have persisted in treating them as though they were still "natural" animals. And as a result we haven't got along as well as we had hoped.

Most of us do realize, of course, that a cow cannot be expected to make 10,000 pounds of milk a year if she has to run out in the bush all winter, so we provide her with a comfortable stable. Likewise, we provide housing for our hens, instead of making them live all year out in the open, as they would do in the "natural" state. But what about feeding? There, I believe, is where we fail most frequently to realize the difference between the requirements of a present-day animal and a truly "natural" animal.

For instance, it is now pasture season. We turned our cows to pasture, and sighed a sigh of deepest relief that we didn't need to feed any more grain till next fall. Even when pastures are unusually good we notice in the summer that the cows lose flesh, and that the milk yield drops too. I've been wondering why—but this thought of a cow being a "monstrosity" has opened my eyes. I've always looked on pasture as a cow's "natural" feed, and expected her to milk well on it all summer and to be in good condition in the Fall. Every Summer, when milk and flesh have both gone down, I have blamed it on a summer drouth or something like that. Now, I am beginning to see that I may have to shoulder some of the blame myself.

Here is how I figure it out now. Pasture is the "natural" feed for a "natural" cow, and will keep up her flesh and enable her to give enough milk to satisfy a good lusty calf. But my cows are not "natural". They're "monstrosities." They have been bred to produce a lot more milk than any calf could drink. To do that, they have to have plenty of the different things that go into the making of milk. Pasture provides those things, of course, but not enough of them—because green grass contains so much water. (Just try to lift a good-sized forkful of new-mown hay, and see). So my cows have the choice of two things to do. They can either slow up on the milk—or take the flesh off their bodies and turn that into milk. Being bred for milk production, they do rob their bodies and put as much as possible into the pail—up to a point where they have to stop in order to keep living. Then the milk flow suffers. If a drouth period happens to come along about that same time—and the pasture gets short and dry—the milk flow slumps like a pricked soap-bubble.

Now, having diagnosed my trouble, what is my remedy? It is really very simple. Just to recognize my cows as "monstrosities" and to treat them as such. To give them enough concentrated feed along with their pasture all Summer that they can make milk, as they were bred to do, without taking any flesh off their bodies. The milk for the first few weeks may cost a little more than it does now—but I believe I can prevent a summer slump and by so doing get enough extra milk to more than pay for the concentrates. That will mean a lower average cost for the

milk produced in the pasture season. And, furthermore, the cows will be in good flesh in the Fall, so I won't have to use a lot of grain then, just to build them up. It always seems hard to get a cow back into condition, once she gets thin.

That is just one example of how, I believe, many of us can improve our methods if we will only realize that our animals are "monstrosities" and not "natural" at all. In stable-feeding cows, we must realize that hay and grain alone (even with silage added) are not enough for heavy milk production. They are the "natural" feeds for winter—but, again, they alone will only enable a cow to make about enough milk to feed a calf. We want more than that, so we must supplement with some kind of protein rich feeds. Protein is what farm-grown feeds lack.

To go into detail regarding hens would be more or less to repeat what I have written concerning cows. Undoubtedly, the cheapest way to feed a hen is to let her roam the fields all summer picking up worms and grubs, seeds and shelled grain, and whatever else she can find. But there is no system of feeding which is more sure to take her backward toward her "natural" state, where she laid just enough eggs to hatch out a brood of chicks. To get the 200-egg flock average, which we all aim for, we must feed her like the "monstrosity" she truly is.

A Dairyman's Experience With Contagious Abortion

AS there seem to be a great many farmers having trouble from abortion, I will pass my experience along for the benefit of those who care to try my remedy. Although it may not be a 100 per cent cure, it is a great help.

I have been farming for thirty years and have had a great deal of experience with this trouble. For the past six years I have been disinfecting both the bull and the cows that have aborted. For three years I have not had a case of contagious abortion.

There seems to be quite a general opinion among the scientific people that the bull does not spread the trouble—my experience does not agree, as 90 per cent of my cases traced directly to the bull.

My remedy is to disinfect both the bull and the cow with carbolic acid—one to fifty with water, using a small rubber syringe.

If you care to print this for the good of those who are bothered with this trouble, I will be much obliged.

EDITOR'S NOTE—Many authorities now agree that the principal source of infection is through eating feed which carries the infection. At the same time, disinfection of both cow and herd sire is commonly recommended as a precautionary measure. One feature of the disease which makes it dangerous and difficult to control is the fact that actual abortion seems to run in cycles. A dairy will have many of them for a year or two, then the herd builds up an immunity and there is not much trouble for a few years. During all this time the infection may be present and is liable to become active.

Our general suggestion is that dairy-men get all possible information from colleges and experiment stations. Information is certainly the first step for any control measures.

A satisfactory concentrate mixture for brood sows is: 69 pounds of corn-meal, hominy, or ground barley; 20 pounds of wheat middlings; 5 pounds of fishmeal or tankage; 3 pounds of linseed meal; and 3 pounds of chopped or ground alfalfa hay.

Ever look into a cow's stomach?

Of course not! But if it were possible you would be amazed at what goes on there!

You'd rush to the nearest feed store for Dried Molasses Beet Pulp—the natural vegetable feed resulting from the extraction of sugar from beets—the feed that keeps the cow's stomach in perfect working order. In addition to being a great feed itself it aids the digestion of the other ingredients in the ration.

Dried Molasses Beet Pulp is **bulky, cooling, laxative, palatable**—just the kind of feed every cow needs in her stomach to keep in perfect health. And your cows must be healthy to be profitable. Fits any ration—replaces corn, barley, oats, silage and other carbohydrate feeds. 6 pounds are equal to 10 pounds of hay. Good for all animals—dairy cows, beef cattle and sheep.

Attractive Prices

Present low prices make it more than ever a profitable buy. See your feed dealer without delay. Shipments made direct from factory closest to buyer.

Butter Continues to Fluctuate

CREAMERY SALTED	May 16, 1931	May 9, 1931	May 17, 1930
Higher than extra	24½-25	24	-24½ 35 -35½
Extra (92 se.)	24	23½	34½
84-91 score	20½-23½	21½-23¼	29 -34¼
Lower Grades	19 -20	20 -21	28 -28½

During the week ending May 16, the butter market experienced another series of wide fluctuations. The market opened on Monday with the bears in control and they drove prices down to 22½c for creamery extras. An abundance of supplies helped create an increased selling pressure. The price reduction brought out wide buying support and by Tuesday, the market had recovered ½c. This continued on Wednesday and on Thursday a full cent was added. As is always the case when a good thing is run to death, this one cent advance on Thursday strained the situation and there was some easiness in evidence on Friday with price shading reported. On Saturday, values fell off one half cent under increased selling pressure that was helped along by a sharp decline at Chicago.

Low retail prices have materially improved the demand for butter for current use. This has given a more encouraging outlook to the situation as at this time of year it is highly desirable to keep stock moving, until the buying trade begins to show a disposition or inclination to store. We do not look for any material increase in the market at this time. Seasonal increases in the make are reported at most of the large centers of manufacture, and it is generally held advisable to keep retail levels as low as possible in order to insure a prompt clearance of arrivals.

On May 15, the ten cities reported storage holdings totaling 10,499,000 pounds, whereas on the same day last year the same cities reported holdings totaling 15,787,000 pounds. From May 8 to May 15, storage holdings in the ten cities increased 1,606,000 pounds whereas during the same period last year holdings increased 2,259,000 pounds. Statistically the market is in good shape. If things were reversed and statistics showed a heavy surplus over the holdings of a year ago then the outlook would be bad indeed.

Light Trading in Cheese

STATE FLATS	May 16, 1931	May 9, 1931	May 17, 1930
Fresh Fancy	12-14	12-14	19-
Fresh Average			
Held Fancy	21-22½	21-22½	24-26
Held Average			23-

Local business has been comparatively light in fresh cheese. At the same time, western markets are offering

goods at lower prices which spells bad going for New York State goods. A buyer's market exists and all kinds of trading is being followed. Many buyers are looking for medium priced cured stock and are accepting short held goods or slightly defective summer goods. Short held flats from New York State are bringing from 16c to 18c. The best of the long held goods which generally consist of the cream of the June make a year ago are held at reasonably well supported prices.

Reports from producing sections indicate that the make is quite heavy, both East and West. In spite of this however, the statistical condition of the market holds fairly satisfactory. On May 14, the ten cities making daily reports had on hand 10,146,000 pounds of cheese whereas on the same day a year ago, the same cities reported holdings totaling 12,004,000 pounds. From May 7 to May 14, holdings in the ten cities were reduced 226,000 pounds whereas during the same period last year they were increased 229,000 pounds.

There is just enough improvement in the outlook for the poultryman, as the market comes to a close on May 16, to make your reporter feel like waxing enthusiastic. In the first place reports from the Central West indicate a very marked falling off in the collections of eggs, although there has not been a very material drop in the lay on the Atlantic and Pacific Coast. The May 1 storage holdings report indicates a lighter input into storage of both shell and frozen eggs during the month of April. Many market men have looked upon this fact as a good omen. Furthermore, the second week in May showed a marked reduction in the into-storage movement compared with a year ago. We must not let these things run away with us, for we must still remember that our reserves of eggs are still very heavy, only being exceeded by those of last year. We also must bear in mind that we have hot weather ahead of us and the consumption of eggs is apt to fall off. But the outlook is better at the moment.

On May 15, the ten cities making daily reports had in cold storage 3,661,000 cases, whereas at the same time a year ago they held 3,848,000 cases. From May 8 to May 15, holdings increased 376,000 cases whereas during the same period last year the into-storage movement in the ten cities totaled 452,000 cases.

During the week ending May 16, New York City experienced a short spell of extremely mild weather. It was a forewarning to poultrymen that they must exert more care than ever, this year, in the method of handling their eggs to avoid penalties through heat damage.

GEESE	12-13	22-	12-14

Prices for live poultry during the week ending May 16, were purposely held down to get the market back on its feet. During the early days of the week everything went well but demand grew so toward the close, that buyers forced the price up on fowls and some sales were forced at premiums. The market shows little change for fancy Rock broilers. As is usually the case, Reds have not sold as well as Rocks, usually ranging from 25c for the poor-

est Reds to 34c for the best. Leghorn broilers have been top heavy but they closed stronger.

Next week is Decoration Day and if your broilers have been well fitted, plan to have them arrive on the market about the 27th or 28th. Do not delay your shipment because if they arrive on the 29th the chances are that they are going to suffer.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Kidney Beans Easier

Red and white kidney beans suffered a slight decline during the week ending May 16. As the market came to a close Reds were bringing \$7.50 to \$8.15 while White Kidneys were bringing \$5.75 to \$6.25. Jumbo Marrows are still quoted at \$4.75 to \$5.50, with Average Marrows at \$1 less. Pea beans are bringing \$4.50 to \$5.

Hay a Shade Easier

Liberal receipts and a sluggish demand created an irregular market during the early part of the week ending May 16. As the market came to a close supplies were less plentiful, the demand improved and the market steadied up. Straight timothy in large bales brought from \$21 to \$26 with mixtures containing clover selling at \$20 to \$25 and grass mixtures \$1 less. Sample hay generally ranged from \$14 to \$18. Rye straw has held steady at \$19 while oat straw continues at \$13 and wheat at \$12.

Meats and Livestock

CATTLE—One load good 1218 lb. Western fed steers about steady at \$8.40. Cows scarce, steady. Few low cutters and cutters \$2.00-3.50.

VEALERS—Odd lots nearby vealers steady. Good to choice \$8.00-10.00. Few mediums \$6.00-7.50. Deck good 160 lb. Kentucky vealers \$8.75.

LAMBS—Load good and choice 66 lb. Virginia Spring Lambs fully steady at \$12.75.

COUNTRY DRESSED CALVES—Receipts were moderate to light during the week. Trading was slow up to Friday, when a light supply and increased trading caused an advance. Market closed steady. Fresh receipts per pound: Choice 11-12c; fair to good 9-11c; small to medium 7-9c.

HOTHOUSE LAMBS—Receipts moderate to light during the week. Demand slow and for fancy only. Market steady, at \$3.00-7.00 each.

LIVE RABBITS—Receipts light to moderate, during the week. Demand slow. Market closed steady at 15-22c per pound.

MAPLE SYRUP—Market steady.

United States Commercial Standard, graded and filtered per gallon: No. 1, \$2.25-2.35; No. 2, \$1.75-2.25; No. 3, \$1.65-1.75 (Farmers run equivalent to No. 3). Sugar in casks, farmers run 20-25c.

WOOL—New York better fleece wool, unwashed, fine, per pound: 18-25c; ½ blood 18-25c; ¾ blood 18-22c; ¼ blood 18-21c; low blood, 17-19c; common and braid 16-18c.

Farm News from New York

Holstein Breeders Will Visit Ithaca--Dairy Records for March

A TOUR through the Finger Lakes region of New York will be a feature of the forty-sixth Annual Convention of The Holstein-Friesian Association of America to be held at Syracuse during the first week of June. Delegation visitors will have the chance to see this famous beauty spot left by the retreat of the glaciers, and will also have the opportunity of visiting the New York State College of Agriculture at Cornell University.

H. H. Wing, president of the Association and probably the best versed man in Holstein-Friesian history, a former member of the Agricultural College staff, makes his home there.

Registration of delegates, committee meetings, visitors, and meetings of the Board of Directors of the Association will be held on Monday and Tuesday, June 1 and 2, after which trips to parts of the surrounding territory will be on the program.

Dr. Whitman Howard Jordan

M R. Whitman Howard Jordan for twenty-five years director of the New York State Agriculture Experiment Station, and one of the best known agricultural scientists in the country, died Friday, May 8, at Orono, Maine.

Dr. Jordan's death brings to a close a long career devoted to the study of agriculture. A keen student, he received honors from many sources for his work and leadership at the station until his retirement in 1921.

Under his direction many contributions to agriculture were made by the workers at Geneva. All who ever worked with him sincerely mourn his passing.

Poultrymen Form New Northeastern Poultry Council

R EPRESENTATIVE poultrymen, hatchery owners, and members of State College and State Department of Agriculture staffs from Northeastern States, met at New York City on May 15, to complete the organization of a Northeastern States Poultry Council.

This movement was started over a year ago and some, at least, of those present gave Professor Harry Lewis of Rhode Island, credit for originating the idea. A meeting of representatives held last winter during the Madison Square Poultry Show, which meeting was reported in American Agriculturist, discussed the formation of such an association and a committee was appointed to draw up the constitution. Yesterday, the representatives present approved the constitution and elected the following officers:

President, F. R. Hazard, Rhode Island; vice-presidents, J. C. Weisel, New Jersey; Guy Leader, Pennsylvania; W. C. Newton, Delaware; secretary-treasurer, W. C. Thompson, New Jersey.

The constitution provides for a number of standing committees. The chairman of each committee was named who will select the other members of his own committee. The following are the committee chairmen: Marketing, S. A. Edwards, Hartford, Connecticut; Legislation, H. R. Lewis, Rhode Island; Breed improvement, Professor Rice, Cornell University; Education, Professor Graham, M. A. C.; Egg laying contest, W. C. Thompson, New Jersey.

Following the election of officers an exceedingly interesting program was staged. After a short talk by Professor James E. Rice of Cornell, Mr. A. W. McKay, representing the Farm Board, explained the work which the Board is doing. A very active discussion after the talk by Dr. Beaudette of New Jersey, on disease control, showed the great interest which poultrymen have in this problem. Other speakers were Alfred Van Wagenen, whose subject was, "A Breed Improvement Program for the Northeast"; Sidney Edwards, director of the Connecticut Department of Agriculture, who spoke on "Improv-

ing Marketing Practices in the Northeast"; and Professor Harry Lewis, President of the National Poultry Council, who spoke on "Poultry Legislation."

The enthusiasm of those attending the conference was very noticeable and it is confidently believed that the Northeastern Poultry Council will be an active force in improving conditions of the poultry industry in this section.

Official Egg Laying Contest For N. Y. 4-H Poultrymen

N EW YORK 4-H poultry club members are to have an official egg laying contest. Pens have been reserved at the site of the New York State Official Egg Laying Contest at Horseheads, New York, for ten 4-H club members. In view of the limited number of pens only one applicant from a county can be accepted and only the first ten counties to apply can be accommodated.

This contest will be in charge of R. C. Ogle of the Poultry Department of the New York State College of Agriculture at Cornell University.

State Buys Forest Reservation Land

R ECOMMENDATIONS for the acquisition of nearly 30,000 acres of land in the Adirondack and Catskill Forest Preserves were submitted to the Land Board last Thursday. These recommendations were approved by the Land Board at an average price per acre of \$8.30.

The outstanding acquisition was nearly 22,000 acres in Northwestern

Herkimer county along the Beaver River and included a substantial amount of shore line on the Beaver River Flow.

A little over 5,000 acres is located in the Catskill Park on the Delaware River watershed.

4-H Club Congress June 29-July 2

T HE first New York State 4-H Club Congress will be held at Cornell University June 29th-July 2nd. This Congress is to be held at about the same time and will take the place of "Junior Field Days" which for a number of years was an important event in the Club year.

Attendance at the Congress is limited to 2½ per cent of the Club enrollment in the counties, and to those 14 years of age and over who have had at least two years of 4-H club experience. It is expected that about 600 will be in attendance, equally divided between boys and girls. In addition each county is entitled to send a leader or chaperon for each 10 boys and for each 10 girls or fraction thereof.

The program will be planned with a view to preparing those who attend to become assistant club leaders and later leaders of clubs in their home communities.

Large Number of Applications for Pheasant Eggs

O NE thousand three hundred twenty applications from 4-H boys and girls have come in for pheasant eggs under the plan whereby the state buys back the pheasants after furnishing eggs to club members. The project of pheasant rearing was made possible through the

cooperation of the Conservation Department and from the present outlook the pheasant population of New York State should be increased materially this fall.

New York Delegates to National 4-H Camp

R UTH KNOWLES of Watkins Glen Schuyler County, Marion Crandon of Baldwinsville, Onondaga County, Herbert Smith of Rochester, Monroe County, and Reginald Drake of Potsdam, St. Lawrence County, will represent the New York 4-H Clubs at the National 4-H Camp at Washington, D. C., June 17-23.

These fortunate young people were selected after careful consideration of their accomplishments from a large number of applicants, all of whom have exceptional 4-H club records.

Margaret Lloyd and Roscoe Owens, both of Chenango county, were selected as alternates.

Cornell Student Wins Award

B RADLEY Otis Gormell, of Nunda, a junior in the New York State College of Agriculture, is the fourth Cornell student to be awarded the William H. Danforth scholarship. Mr. Gormell receives \$400 in cash, six weeks at a commercial experiment farm near St. Louis, and two weeks at the American youth foundation camp at Shelby, Michigan.

4-H Leader Has New Assistant

P ROFESSOR W. J. Wright of the New York State College of Agriculture has announced the temporary appointment of H. S. Pringle as assistant State Club leader in 4-H club work to take the place of J. A. Reynolds, who is on sick leave. Mr. Pringle has been a 4-H club specialist in agricultural engineering for the past two years and is thoroughly familiar with the work.

New York County Notes

Cortland County—The central school in Virgil was dedicated Friday evening May 8, with a crowd exceeding five hundred crowding the auditorium to capacity. Speakers of the evening were Commissioner of Education, Dr. Frank P. Graves, and Representative Smith. Superintendent of Schools, Claude B. Carter also made a brief announcement touching on the history of the centralization plan in Virgil.

Many prominent Cortland county citizens got their original schooling in the old district school in the village and many of these men were present at the dedication of the new school building, which is reputed to be the best, for a town of its size, in the state.

Farmers are coming along well with their spring work. Store keepers are paying 15 cents a dozen for eggs in trade.

Genesee County—A Dairyman's League meeting was held at the I. O. O. F. Hall at Alabama Center, May 2. About sixty were present. William Thompson, chairman, was elected a delegate to the state convention to be held at Utica in July. Howard Underhill was elected delegate to the district meeting to be held at Rochester. A short program was carried out after which ice cream and cake were served. While the meeting was being held, one can of ice cream was stolen.

The daylight saving plan causes much confusion. A good share of the country folks work early enough as it is. How much wiser it would be if those who wish more time would get up an hour earlier instead of changing the clocks.

We have had plenty of rain during the past week. The land is too wet to work and it will be several days before low lands will dry off. Crops that are planted are coming nice. Meadows and pastures look green again.—Mrs. R.E.G.

Wolcott Young Farmers Set Forest

S IR William Johnson Agricultural Society of Wolcott High School observed Arbor Day by setting 1000 Scotch pine as a part of the George Washington Bicentennial Memorial which is being sponsored by the American Tree Association.

The land on which the trees were set was donated to the Agricultural Society by a local farmer, Wolcott Jackson, in response to an article placed in the local paper by the Society. Other plots were offered but this was accepted because it was distinctly waste land, useful only for reforestation, and is located next to the highway.

In preparation for the planting we first grubbed out the brush and wild cherry and burned it. Then we set stakes in a straight line six feet apart parallel to the road and six feet from the boundary fence. Along one end we then set stakes at right angles to these stakes for the starting row.

The trees arrived on Wednesday, two days before the date for setting, from the State Conservation Department. We took them down to the plot at once and heeled them in so that they would not die before ready to set.

Arbor Day morning 23 Young Farmers and 17 4-H boys with mattocks, shovels, pails and rope went down to the plot to set the trees. We used the rope and whistle method in setting the

trees. The rope was 75 feet long to which we had previously tied a piece of white cloth every six feet. A boy held each end of the rope, one boy holding his end directly on the stakes along the road, the other holding his end in line with the stakes set on the starting end of the plot. Every half minute a whistle was blown and the rope moved forward six feet thus making the trees six feet apart each way. The trees were planted directly under the strips of cloth. For the setting the group was divided into parties of three each of which there were eleven. Each was made up of two young farmers and one 4-H boy. One young farmer removed a strip of sod a foot square and dug the hole and the other set the tree. The 4-H boys carried the trees in pails containing a little water to keep the roots moist and gave the trees to the tree planter. It took us about one hour to set the 1000 trees and we all had a good time.

These trees are only a part of the trees that will be set by us. 1000 Japanese larch were to be planted this spring but the buds were too far advanced to remove from the nursery so that these will be set this fall on the same piece of property which includes about three acres. A local lawyer donated his services in making the deed transfer. He is also acting as our legal advisor.

—ARTHUR KASPER, WOLCOTT, N. Y.

Rearing Chicks in Confinement

WHEN poultry ranges become so contaminated with poultry parasites and poultry disease organisms that it is impossible, in spite of careful management, to raise vigorous healthy pullets free from parasites, confinement rearing appears to be the best solution of the problem. On the other hand poultrymen who have considerable acreage will find it advisable to continue to grow pullets on clean land. Pullets should have a place in a crop rotation planned so that chickens or poultry manure will not be on the same piece of ground more than one season out of three.

However, the use of a rotation will not be a guarantee that coccidiosis and worms will not make their appearance. Strict sanitation or cleanliness must be practiced. This means clean houses, clean feeding and watering equipment and clean feed. Poultry manure, wherever it accumulates, whether on the floor, on the roosts, near the chick exits, both inside and outside of the house, around the waterers, or near the feed boxes, must be removed from possible contact with the chickens and must be kept in a place which is fly proof. The problem of cleaning the soil near the brooder house or range shelter is not an easy one and it would, therefore, seem to be good practice to move the houses or shelters 75 or 100 feet every two weeks during the growing season.

Instead of considering confinement rearing a panacea for all of the ills of young stock it should be adopted only as a substitute for extensive methods. While confining chicks solves some problems it also produces other problems, principally cannibalism. The use of a concrete yard or a wire platform or a combination of both is the keystone of confinement rearing. The chief object of this method is to keep the chicken off the ground.

When one practices confinement rearing, cleanliness becomes the most important factor in successful management.

—Farmingdale Institute of Applied Agriculture.

The 27th Week at Storrs

IN the twenty-seventh week of the Storrs laying trials the total production amounted to 5,297 eggs or a yield of 75.7 per cent.

Parmenter's Red Mount Farm of Franklin, Mass. led off last week with a lay of 67 eggs and a score of 67 points. Thus, this pen of Reds ranked at the top in both columns. White Leghorns, entered by Egg and Apple Farm of Trumansburg, N. Y., ran second, for the week with a tally of 66 points.

Three pens of Barred Rocks, bred by Hawes Brothers of Union, Maine, R. Walter Bishop of Guilford, Conn., and James Dryden of Modesto, Cal. all tied for third place with Hollywood Poultry Farm's pen of White Leghorns from Woodinville, Wash.

White Leghorns, owned by Tom Barron of Catforth, Eng., Rhode Island Reds, entered by West Neck Farm of Huntington, L. I., and Australorps, sponsored by Kabeyun Farm at Pittsford, Vt., all tied for fourth place with 64 points each.

Farm-Owned Auction Markets Successful in New Jersey

(Continued from Page 3)

value of the products sold and the gross receipts. This represents the actual Cedarville price against what the same produce would have brought had they been sent to New York.

The next question that naturally arises is,—“Did the growers receive as much for their products they sold over

Wonderful Success

In Raising Baby Chicks

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses in raising baby chicks. We will let Mrs. Rhoades tell her experience in her own words:

“Dear Sir: I see reports of so many losing their little chicks, so thought I would tell my experience. My first incubator chicks, when but a few days old, began to die by the dozens. I tried different remedies and was about discouraged with the chicken business. Finally I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko Tablets to be used in the drinking water for baby chicks. It's just the only thing to keep the chicks free from disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose.”—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Danger of Infection Among Baby Chicks

Readers are warned to exercise every sanitary precaution and beware of contaminated drinking water. Baby chicks must have a generous supply of pure water. Drinking vessels harbour germs and ordinary drinking water often becomes contaminated and may spread disease through your entire flock and can cause the loss of half or two-thirds your hatch before you are aware. Don't wait until you lose your chicks. Take the “stitch in time that saves nine.” Remember, that in every hatch there is the danger of some infected chicks. Don't let these few infect your entire flock. Give Walko Tablets in all drinking water for the first two weeks and you won't lose one chick where you lost dozens before. These letters prove it:

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: “I used to lose a great many of the little downy fellows, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 422, Waterloo, Iowa, for their Walko Tablets for use in the drinking water of baby chicks. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after using the Tablets and my chickens are larger and healthier than ever before. I have found this Company thoroughly reliable and always get the remedy by return mail.”—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send Walko Tablets entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is when used in the drinking water for baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for a package of Walko Tablets (or \$1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Pioneer National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

Walko Tablets are sold by leading druggists and poultry supply dealers.

BROWN J. M. Chase, Box 4, Walkkill, N.Y.

the auction, as they would have received, had they shipped them to some terminal market?"

To answer this question, let us turn to some figures, prepared by County Agent D. M. Babbitt, Bridgeton, who has followed this auction market idea from the very start. Mr. Babbitt took the average returns from the auction market day by day and then compared these prices with those prevailing in New York the next morning, and we find some interesting facts that should prove the value of auction marketing. Just a minute ago, we stated that the gross sales at the auction were in excess of \$382,000 while the value of the products sold was about \$399,000. That difference of \$17,000 represents the margin between Cedarville prices and those in New York the next morning. But that does not tell all of the story. We must keep in mind that the auction price all goes to the grower, while the New York prices are gross, from which must be subtracted the cost of transportation and commission. Does the \$17,000 cover those two items, we ask.

Turning again to the figures compiled by County Agent Babbitt, we find that the receivers charged back against the \$400,000 of products, an item of \$40,000 for commission and the railroads and the trucks took out another \$48,000 for hauling, or a total of \$88,000. Digging just a little deeper into the actual operation of the market, we find that instead of the actual \$382,000 which they did receive they would have been paid only \$311,000 or a net profit from the auction of \$66,000 for the one season. One naturally wonders if these figures can be correct, so we had them checked with W. W. Oley, Chief of the Bureau of Markets, Trenton, who assured us that they are as near correct as it is possible to get them.

What does it cost to operate a market such as this one at Cedarville? The auction management retained exactly \$3,913 from the \$382,000 worth of farm products to pay the auctioneer, the operating expenses and other items, such as the balance on the building and the land. Not only did this sum pay all of the bills, but it left them a nice balance in the treasury for the coming season. Does auction selling pay?

What about the other markets? From various sources, we secured the gross sales on the auctions in other parts of the state. We find that they have had similar results, but not all as marked as at Cedarville.

Auction	Gross Sales
Cedarville.....	\$399,087.00
Rosenhayn.....	102,877.00
Newport.....	144,609.00
Beverly.....	175,000.00
Hammonton.....	319,000.00
Williamstown.....	15,579.00
Flemington.....	55,000.00
Toms River.....	54,000.00

The Cedarville market illustrates the vegetable and fruit system of auction selling, and now let us turn for a moment to Flemington where they sell eggs exclusively. This is a brand new venture; it has been in operation only a few months, but the results speak for themselves. In less than three months Flemington has sold about \$45,000 worth of eggs, while the Toms River market has sold about \$51,000 worth in five months time.

Are prices any better than New York? We will let the sales slips speak for themselves. They show that auction prices are about 20 per cent above terminal market values. On this basis, we find that the auction markets in these eight communities have added approximately \$250,000 of clear money to the income of the producers who are using these facilities; not a bad nest egg, especially in a year of poor markets and low prices.

The Story Thus Far

Jim Stuart rescues Aurore LeBlond from a drifting canoe in the lake. LeBlond, Aurore's father, searches for her and gets to Stuart's trading post. LeBlond's lieutenant, Paradis, tries to persuade LeBlond that Stuart, in spite of the storm, should have notified them of her rescue. Before they leave, Aurore and Jim arrange a meeting place on an island.

Jim's trading post has lost much of its business to the rival concern, whose local representative is LeBlond. Old Esau, a native in Jim's employ, has a plan to get the business back. Jim goes to the island to get a promised letter from Aurore.

Paradis, who has stolen Aurore's note, gets the drop on Jim and starts to take him to LeBlond, but Paradis is outwitted and given a ducking and a warning.

* * *

As the stem of the canoe nosed a wedge-shaped ripple over the still lake tinted with the rose of the afterglow, past the silhouettes of spruce ridges purple against the flushed sky, the poignant memory of the bewildering girl the storm had brought to Sunset House accompanied the Bowman.

At last, while there was yet light to make camp, they landed. And before the supper was cooked, Smoke appeared, wet from his swim across the mouth of a wide bay.

"Well, old sport, you left the shore to follow game, eh?" Jim rubbed the black ears of the great head as the panting Smoke swished his tail in pleasure at reaching his master. "We stopped and whistled for you, you old son-of-a-gun, on the other shore of the bay, but couldn't hear you. You went hunting and got a mile swim for your pains. Now, don't shake here, into the biscuits! Omar'll beat you, if you do."

Squatted at the fire, watching a pan of frying pike Omar chuckled at the remark.

"W'en Omar beat dat Smoke, he bet-tair beat Jeem, too, eh?"

"You think I'm as crazy about this old black-and-white pup as that, do you? Well, you may be right."

Omar Asks a Few Questions

After supper, with the dog's great head between his knees, Jim described his meeting with Paradis while the seamed face of Omar reflected his disapproval in a set scowl. Much as he shrank from bringing Aurore LeBlond into the narrative, the staunch loyalty of his friend deserved in return Jim's complete confidence. Omar had already guessed why he had taken that morning paddle. There was nothing to do but frankly admit what had brought him to the split rock and his meeting with Paradis.

"You lak' dat woman ver' moch?" the half-breed asked gravely when Stuart had finished. "Eet mak' troub' for you."

"Yes, I like her." Jim was aware of the swift flush under his bronzed skin as he spoke. "But don't worry about that; I'll never have a chance to see her again."

"I t'ot you lak' dat girl of Christie, at Lak' Expanse," replied Omar, his black brows contracted in a puzzled glance.

"Well, I like her, too, Omar. She's a fine woman, Mary Christie."

"But eef you lak' dat French girl,

why you not let heem drown—dis Paradis?"

Jim shook his head. "I couldn't do that. He couldn't swim. I had upset the boat."

"He weel mak' moch troub' for us. Bettair let heem drown; no one know." The Indian in Omar had spoken.

"No, not even Paradis," protested Jim. "But he'll never forget that stomachful of water he got. We're in for it now. LeBlond'll blow up, too, when he hears."

"You cross de lak' again, Omar go wid you," said the older man, with a snap of his square jaw.

"You old wolf! You wouldn't let Paradis off, if you got those paws of yours on him. Their beating us for the trade's got under your skin."

With a guttural growl Omar nodded. "We feex dem yet, you and Esau and Omar. We get fur from de Pipestone countree dis long snow, or—phit! Sunset House, she bust!" And knocking out his pipe, the loyal French-Ojibwa prepared to roll himself in his blanket.

* * *

CHAPTER VII

TWO days later Jim and Omar were packing over the portage between the Lake of the Sand Beaches and the Woman River, which flowed into Lake Expanse. Ahead, Smoke thrashed through the "bush" in search of rabbits. Half-way across the carry Omar rested the bow of the canoe in a birch and Jim slipped the tump-line lashed to his back-load from his forehead. Then they sat down and filled their pipes.

"Christie's going to tear his hair over our small spring trade," said Jim. "I suppose he'll blame it all on me."

"Ah-hah, he forget w'at you did at God's Lake."

"They're prodding him pretty hard from Winnipeg. He's a bit worried—thinks they might retire him."

The furious yelping of the husky up the trail caused the two men to lift their heads in curiosity.

"What's he got, there?" queried Jim. "He's not running—can't have stumbled into a sulky bull moose."

Omar shook his head. "He got some-ting een a tree."

"Well, let's start along," said Jim. "He's near the trail. We'll find out."

Taking up their loads the two men continued over the carry. Shortly they came up with Smoke yelping excitedly a few yards off the trail.

Slipping the tump-line from his head, Jim dropped his load and turned off the path to see what the husky had treed, when an angry voice rose above the bedlam of the husky's yelps.

"Call off that dog!"

In the thick branches of a spruce perched a stranger treed by Smoke.

"Here, Smoke! Stop that noise!" Secretly amused at the discomfiture of the man in the tree, Jim reached his dog. "He's all right, now; he won't bother you," he said, wondering who this white man might be who was evidently walking the carry ahead of his crew when met by Smoke.

"What d'yuh mean—having a woli like that loose in the bush? If I'd had my gun, I'd have bored him."

Holding Smoke by the collar, Jim curiously watched the speaker descend from his tree.

"Oh, no, you wouldn't kill a valuable dog because he yelped at you. If you'd

spoken to him, he wouldn't have hurt you." Jim scrutinized the stranger who suspiciously eyed Smoke now calmly surveying his former quarry. Evidently, from his good clothes and general appearance, he had come from "outside." Who could he be?

"Speak to him? I spoke to him in four languages, but he wouldn't listen," laughed the other.

"Well, Smoke's satisfied that you're all right, now," said Jim, impressed by the good nature of this man in new whipcords, with the stamp of the city on face and manner. "You left your outfit at the end of the portage?"

McLauren Introduces Himself

"Yes. You're Hudson's Bay people, I suppose." The stranger smiled. "I'm McLauren, of the North-West Trading Company."

"Oh, yes, Mr. McLauren. I've heard of you." Jim had indeed heard of the man who had furnished the financial backing for LeBlond's string of fur posts; but he was surprised to find him so young—hardly forty, from his looks. "My name is Stuart. I'm in charge at Sunset House."

For a space McLauren seemed to measure the calibre of the tall fur trader with the level gray eyes which

Sarah.

coolly looked into his. Then he said: "So you're the chap who's bucking us at Sunset House?"

The sound of voices down the portage trail aroused Smoke, but a sharp command from Jim silenced him. "Yes, Mr. McLauren," said Stuart, his face hardening. "I'm bucking you. In the last three years you've had the laugh on me, but I want to tell you that you'll have to work for the fur in the future."

McLauren, with a smile, extended his hand. "Good day, Stuart," he said, ignoring Jim's remark, "from what I hear of you, you're too good a man to be sacrificed at Sunset House. The odds are too heavy against you."

"This winter the odds are going to shift," said Jim, as McLauren's men came up with the canoe and dunnage, and the partner of LeBlond left him.

"You mak' moch talk wid dat feller," grumbled Omar, walking to the canoe. "He tak' de fur from you an' you shake hand. Bettair let Smoke eat heem up, eh?"

"You're certainly a good hater, Omar," laughed Jim. "But the man was friendly, and I was glad to have a look at LeBlond's partner."

"Ah-hah!" grunted the half-breed,

American Agriculturist, May 23, 1931 lifting the Peterboro to his shoulders. "He steal de fur an' he steal de girl."

Across the remaining mile of portage to the Woman River Omar's gloomy prophecy dominated Jim's thoughts. Already he had put the hope of again seeing Aurore LeBlond, that summer, behind him, but the thought of McLauren monopolizing her for days—weeks, possibly—aroused in him a deep resentment over the duty which had sent him south to Lake Expanse. He found himself wondering if this McLauren were a single man—then laughed at a jealousy based on a few hours with a girl whom, in all likelihood, he would never see again.

On down the wild water of the Woman River travelled the canoe on the trail to Lake Expanse. Reaching the great lake, they paddled all day through the islands at its head, past the camps of summering Ojibwas living on their fish nets and an occasional caribou or moose; enjoying for a few brief weeks, after trading their fur at the post, a life of ease until September sent them back to their winter trap-lines in far valleys and their six months' battle with the long snows.

Close to Headquarters

On the afternoon of the second day the canoe approached the white buildings of the headquarters of the district. From here, north, east, and west, by lake and river each summer went the supply boats of the company to the outlying fur posts deep in the heart of Kiwedin, and thither in June came the fur canoes. Here, for years having lorded it over a country larger than that of many a monarch, Andrew Christie, loyal henchman of the Hudson's Bay Company, had watched with jealous eyes and rage in his heart the coming of LeBlond.

The Peterboro approached the post asleep in the soft July sun. Here and there on the grass of the clearing sprawled the dogs of the sled-teams. On the beach below the row of cabins of the Indian servants, children splashed in the water. From the chimney of the factor's house enclosed with its vegetable garden by a dog stockade, a feather of smoke lifted. For two hundred years the trading post had guarded the frontiers of Kiwedin. Here, for two centuries white men and women, isolated from their kind, had watched the spring return to the forests and the snow sweep down from the "birth-place of the north wind."

At the big log trade-house Christie and his clerk, McComb, turned from the slab table where they were bent over a book of accounts, heads together, when Jim entered.

"Good day, Mr. Christie—McComb!" greeted Jim.

The dour face of Andrew Christie framed in an iron-grey beard, turned on the voyageur with the effigy of a smile on the stiff lips.

"So ye're here—at last? I've been expecting yeh."

Jim's teeth clamped hard at the coolness of his reception from the inspector of the district, but he forced a smile as he met the spectacled gaze of his chief.

"I came by canoe—not airplane," he countered.

"Well, Mary's waiting to see yeh at the house and supper'll soon be ready, so we'll not talk business now," answered the older man, turning to his figures.

* * *

CHAPTER VIII

AT THE factor's quarters, inside the dog-stockade across the clearing, a woman watched Jim's approach. He waved his hat and she lifted a hand in reply. As he reached her the fair skin of the girl's face was touched with color, her blue eyes, beneath the thatch of gold knotted at the back, alight with pleasure.

Good Enrollment for School Beautification Contest

Some Rural Schools Plan Improvements and Others Are Putting Plans Into Effect

NEWS from Mrs. A. C. Pomeroy, state chairman of the Rural School Beautification Contest, is to the effect that seven counties have enrolled for the planting contest and fifteen counties have enrolled for the plan-making contest.

In the plan-making contest the object is to find out what the school grounds need and to make plans which will supply these needs, especially as to play grounds and equipment, lawn, shrubs, and flowers. The counties enrolled in this contest are St. Lawrence, Erie, Yates, Tompkins, Steuben, Livingston, Niagara, Orange, Oneida, Rensselaer, Cattaraugus, Broome, Saratoga, Orleans, and Herkimer. Each county is supplying its own prizes for the school groups entering, and for state prizes the American Agriculturist is offering one hundred dollars to be divided into four prizes.

The seven counties carrying forward their last year's plans for beautifying their school grounds are Schuyler, Niagara, Madison, Cayuga, Cattaraugus, Orleans, Herkimer. The plans have been made and submitted to Professor Donald Bushey and Miss Lucile Smith for suggestions and corrections and now the schools are going ahead with planting and revising the school grounds according to the plans.

The counties are also providing county prizes for this contest and an anonymous donor is supplying the state prize of one hundred dollars to be divided among the four winners.

Although the numbers competing in the two contests are not great, it is a start in the right direction and it is hoped that all who drive by these schools may see for themselves that there is local interest in the appearance of the surroundings where the community's young people spend the greater part of their waking hours during the year.

Can Rhubarb

ONE way to can rhubarb is to pack the raw rhubarb tightly into jars, fill the jar to overflowing with hot

heavy syrup made in the proportion of twice as much sugar as water by measure, then cooked until the syrup threads when dropped from a spoon. Put the caps on the jars but do not seal. Sterilize for 15 minutes on a rack in a covered vessel of boiling water. The water should be at least one inch above the tops of the jars. Remove the jars from the water, seal, turn upside down on the cloth until the jars are cool, store in a dark cool place. This is a good pie filling or sauce.

A much richer sauce may be made

ute (lavender), E. J. Shaylor (rose pink), Anna Eberius (purple), Scarlano (early scarlet), Elizabeth Tabor

ditions under which the individual is exposed to the plant.

The victim of poison ivy must come into actual contact with the plant to become infected. A good preventive is to wash the hands and face in a five per cent solution of iron chloride in a half and half mixture of alcohol and water. Apply this solution either before or immediately after one goes into a region where poison ivy grows. This remedy can be obtained at almost any drug store.

After contact with poison ivy avoid the use of soaps containing oils for the poison is soluble in oils and is thereby spread to other parts of the body. When other remedies are not available use hot water and ordinary kitchen soap. Cooking soda, one or two teaspoonfuls to a cup of water generally relieves the pain. To soothe the pain and prevent the general spread of the inflammation, fluid extract of Grindella, diluted with six to ten parts of water may be applied with a clean bandage.

Vacation Days are here again!

So nearly here, at least, that it's time for you to be thinking about your Summer wardrobe.

We've prepared a book to help you plan for the most colorful fashion period of the year. A book that offers the best selection of styles for the season for the adult, miss, stout and child, and helps the reader to economize.

You can save \$12 by spending 12 cents for this book. The edition is limited so we suggest that you send 12 cents in stamps today for your copy to Fashion Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Use waxed paper drinking cups for bacon drippings. They are easily disposed of afterwards.

CLOTH PURSE NUMBER B5534 comes stamped on canvas foundation to be filled in with woolen floss in attractively blending colors. The rayon lining, canvas interlining, slide fastener and the woolen floss are included in the package which sells for \$1.65. The purse finishes approximately 7 by 10 1/4 inches. Order from Embroidery Department, American Agriculturist, 10 North Cherry Street, Poughkeepsie.

(very early pink), and Marie Kunderd (early white).

The New Jersey Experiment Station at New Brunswick expects to have a large collection of varieties growing at the station this summer.

Relief from Poison Ivy

NO one is entirely immune to poison ivy. The degree of immunity varies with the condition of the individual, the condition of the plant and the con-

DRESS PATTERN NO. 3086 is dainty and becoming for all-day occasions. The beruffled collar and sleeves and the tiny bolero are youthful and feminine. Coin dotted crepe silk with a plain blouse, plaided gingham, shantung, linen, thin woolens and pastel flat washable crepe silk are also suggested for this model, which cuts in sizes 12, 14, 16, 18, 20 years, 36, 38-inches bust measure. Size 16 requires 2 3/4 yards of 39-inch material with 1 1/2 yards of 39-inch contrasting. Price, 15c.

by placing first a layer of rhubarb about an inch deep in the jar, then a one-half inch layer of sugar, then alternate until the jar is filled, having a layer of sugar the last one. Process these jars in a water bath for twenty-five minutes and handle the same has for the fifteen minute process.

Plant Gladioli

PLANT gladioli every two weeks until early July. Some varieties bloom in sixty days, others in more than one hundred days. The large corms will bloom sooner than small ones of the same variety. Shallow planting brings earlier bloom than does deep planting. However, if the location is windy, deep planting helps to keep the plants upright.

Varieties popular in New Jersey and vicinity are: Giant Nymph (pink), Carmen Sylva (white), Dr. F. E. Bennett (red), Golden Measure (yellow), Min-

BLOUSE PATTERN NO. 3104 is just the pattern for which many women are looking to use with their spring suits. The model is pictured in coin dotted crepe de chine in the popular blue and white combination. Egg shell crepe silk, white crepe satin, printed shantung, wool crepe, jersey and some of the rayons would combine very well with most suits. The pattern cuts in sizes 16, 18, 36, 38, 40, 42, 44 and 46-inches bust measure. Size 36 requires 1 1/2 yards of 39-inch material. Price, 15c.

TO ORDER: Write name, address pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps. Add 12c for one of the new catalogues and address to Pattern Department, American Agriculturist, 10 N. Cherry Street, Poughkeepsie, New York.

it's one bar in the wrapper but two helpers in your tub

In the red and green wrapper, Fels-Naptha is one bar. But the instant you put it in your tub, two helpers get right to work.

That's because Fels-Naptha is more than "just soap." Fels-Naptha is good golden soap and plenty of naptha, the dirt-loosener. So much naptha that you can smell it in every bar! And it stands to reason that when you get two active cleaners tackling your wash together—you're bound to get extra help.

Just try Fels-Naptha! In tub or machine. In hot, lukewarm or cool water. For soaking or boiling. See how quickly dirt disappears—how sweetly clean Fels-Naptha washes clothes—without hard rubbing! Notice how nicely Fels-Naptha treats your hands.

(There's real glycerine in every bar, you know.) Then remember—you can have the extra help of these two brisk cleaners for every wash, and for all your household cleaning, too. Just ask your grocer for Fels-Naptha. Buy it in the handy 10-bar carton.

Special Offer—We'll be glad to send every user of laundry soap a sample bar of Fels-Naptha and a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use the chipper and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only 4 cents in stamps to help cover postage, and we'll mail you the chipper and sample bar without further cost. Write today. Fels & Company, Phila., Pa. Dept. 1-5-23

Under Frozen Stars

(Continued from Page 12)

"Well, Jim, how are you?" said Mary Christie as he took her hand. "I seems years since you were here in January."

"Seems longer than that to me, Mary," he returned. Then, with a mock-serious glance at the knotted braids at the nape of her neck, continued: "Haven't bobbed them yet, I see!"

"Would you like it better that way?" she asked.

"Bless you, no! Stick to it, Mary. 'Twould be a crime to cut hair like yours. How well you're looking this spring!"

As they entered the house the girl threw a sidelong glance at the bold profile of the man beside her. "I'm glad you think so, Jim. Judging from the old papers and magazines we get here, the women down in the cities have completely lost their senses."

Jim smiled as he thought of **Aurore LeBlond**. Sooner or later the news of the girl's mishap and the visit of her father to **Sunset House** would reach **Lake Expanse**. He would have to report it to **Christie**. But he would tell **Mary** now before her father and **McComb** appeared.

"Did you know that my rival **LeBlond** has his daughter with him this summer?" he boldly began.

"The Indians saw them when they passed through. Have you seen her?" demanded the girl with interest.

"Well," said Jim with a smile, "I should say that I have. We found her in a big blow clinging to a canoe drifting in the lake."

Mary Christie leaned toward the speaker, her face eager with curiosity. "You saved her life—pulled her out of the lake? What's she like?"

The feminine curiosity evidenced in the question drew a laugh from the trader. "That's just like a woman! You're more interested in the looks of **LeBlond's** daughter than in our picking her out of the lake. Well, she had bobbed hair and wore knickers. What d'you think of that?"

"I don't think much of it," said **Mary**, drily, "but you're not telling me what she's like—dark, I suppose, and used her eyes on the susceptible **Jim Stuart**, as they all do."

"Now when have you seen me with a white woman?" he demanded.

Jealousy

"I've seen the half-breed girls making eyes at you, here, at the spring trade. You know, Jim, the women all like you," she teased. But beneath her raillery **Stuart** sensed jealousy of the unknown daughter of **LeBlond**.

HANDY ANDY Says "Here's How"

To Make a Wire Net Dam For Filling Up Ditches

By Ray Inman

On each side of ditch sink a post 5 feet deep. Stretch a 3/8 inch cable between posts at surface of ground so it will give but wont sag.

Attach hog wire netting to cable, letting the other end extend 5 ft. up stream along the bottom of ditch, fitting close to banks. Bend up wire edges at banks.

Stake down the upstream end and cover it with dirt. Throw some straw on the wire netting. Place these dams from 50 ft. to 100 ft. apart.

What Does the Contract Say?

Last August a gentleman from the company induced me to adopt their plan of saving \$10 a month. The local bank was to forward \$50 to their company and I was to pay in at \$10 a month for ten years if I wished. I signed a paper saying that I would pay the bank \$50 in five months which is the only paper I signed.

The agent said I could withdraw any time I wanted to after the five payments were made and I would have the money returned. Now I want to withdraw and the cashier of my bank has written them several times. Up to date I have not received the money.

WE asked this company, which by the way seems to be entirely reliable, whether they would return this money to our subscriber. Their story is as follows: First, that our subscriber signed the contract for the purchase of a \$1,000 first mortgage certificate to be paid for on the installment plan. Second, it appears that the agent accepted the note for the first five payments, took the note to the bank and had it discounted, and forwarded the money to the bank he was representing, who then paid him his commission. Third, the company says that they, of course, do not like to have dissatisfied customers, but that inasmuch as they have the signed contract of our subscriber, which by the way contains all the usual notices to the effect that no alterations or verbal agreements are binding on the company, they do not feel that they can legitimately be expected to break a contract.

We are thoroughly in favor of regular savings but certainly everyone should be very careful to know exactly what plan they are following in making their savings, should read every paper with the greatest care, and should not take verbal representations of agents without checking it to see that these statements are also contained in the contract.

Reported in Difficulties

THE A. A. Service Bureau has recently received several complaints against Jewell Bros., Inc., 425 West 14th St., New York City, with a branch office at 133 Reade Street. They are licensed and bonded commission merchants. On checking up we hear rumors in the market section that this firm is in financial difficulties and is about to liquidate.

We understand that this firm is also closely connected with Jewell, Koenig & Co., Inc., also licensed and bonded, located in Washington Market.

Shippers, of course, will be protected to the extent of the bond in case these firms discontinue business.

It Looks So Easy

IF easy puzzle schemes were not misleading a smaller percentage of the people who read them would answer them. Here are a few facts to prove this statement.

A recent puzzle scheme is headed, "Win \$2,500." The puzzle shows an automobile with a number of faces drawn into the scenery. The puzzle says, "Can you find five faces?" There are at least ten in the picture so it is the exceptional person who cannot find five.

What happens when you answer this advertisement. First, you receive an enthusiastic mimeographed letter saying that the answer is correct and that it wins 900 points toward the 1,000 points needed to win the automobile. In the second place, you are asked to help introduce a line of cosmetics. If you bite on this offer the assortment is sent to you. You pay \$2.00 for it. You can either sell it, use it, or throw it away. This gives you 99 more points so you now lack one point from winning the automobile.

This last point goes to the person who secures the most "auto credits" which are awarded, according to a cer-

tain scale, for selling the articles put out by the company responsible for the ad. Everyone who starts selling these products receives encouraging letters pointing out that they have as many points as anyone and that they only need one more. Such a contest usually runs for months though the ad is repeated over and over. You can imagine how much chance those have of winning who enter the contest just a few weeks before it closes.

Presumably, thousands of folks from all over the country answer the advertisement. We will leave it to your judgment how much chance you have of winning such a prize even though the contest may be conducted exactly as they say it is. We maintain that this type of advertising is distinctly misleading. You will not find it in the columns of AMERICAN AGRICULTURIST.

Offering Correspondence Course—Not Work

I have received several letters from the Menhennit Company of Toronto, Canada, offering me home employment. I am very much in need of such work due to the fact of my husband's unemployment, but I hesitate to invest any money until I feel it is absolutely safe. I am enclosing the contract from the Company. Will you kindly write me any information you may have concerning this matter and tell me what you would think advisable for me to do?

WE would like to point out that the Menhennit Company is primarily engaged in selling a correspondence course in show-card writing and that they are not offering home employment, at least not until the applicant pays them \$46 for an 18-weeks correspondence course.

In the first place, we understand that a very large percentage of all those who ever sign up for a correspondence course never complete it. Of course, those who do not complete it

cannot collect under a guarantee of satisfaction, neither can they collect under a guarantee that the company will furnish them work. At the same time, we want to point out that anyone who signs a contract is legally liable for the full cost of the course whether they complete it or not.

Advertisements like those put out by the Menhennit Company should not be listed under "help wanted", nor under "home employment", but should be listed under "instruction" or "correspondence courses." We have never felt it advisable to contract for any correspondence course through hope that you will be able to get employment and profitable wages on its completion. We never, in our wide experience, have come in contact with any considerable amount of home work in show-card writing.

Another Eye Specialist

I am writing you about a man who is traveling around saying he is an eye specialist sent out by the St. Francis Hospital, Philadelphia, to examine people's eyes free of charge. He says that your glasses need changing and then he turns his back and then tells you that it costs \$64 but that he will do it for \$32. I do not believe that he changed them at all.

He wore a light mixed suit, a light hat, and weighs about 170 pounds and is short and heavy set. He speaks with either a German or Jewish accent and is bald. He said he was Dr. Fletcher, 161 Chestnut St., Philadelphia but signed his name as A. Martin.

WE inquired of the Philadelphia Better Business Bureau who report to us that there is no St. Francis Hospital in Philadelphia, neither is there any 161 on Chestnut St. In addition to this it is our common advice that no one should patronize a traveling doctor of any sort. If a man answering this description comes to your place we suggest that you notify your local police authority or State Troopers.

Complete plans for a simple milk house and for an insulated cooling tank are given in the new bulletin E-200. It is illustrated and has a complete bill of materials. Ask the office of publications at the New York state college of agriculture for a copy. It is free.

FARMEX FACTS

Millet, who dedicated his life to portraying French Peasant Life, painted "The Man with the Hoe" in 1862. So carefully did he study this character that he first modeled the figure in clay and then made the painting... This figure, pausing for a moment's rest from the most toilsome of field work, often has been subtitled "Labor."

FARMEX EXPLOSIVES

The "hoe" shown in this painting is similar to the grub hoe often used for removing stumps by hand before the use of explosives became common practice. Today many tons of Farmex are used each year for removing stumps. Thus the farmer is saved the hard, grueling labor that goes with the use of the grub hoe. Write for information on Farmex.

ATLAS POWDER COMPANY
Wilmington Delaware

Reach for ABSORBINE if horses' legs swell

Don't take chances on lay-ups. Rub effective Absorbine on muscles and tendons sore from heavy pulling. See how it reduces swellings due to strains. Never blisters or removes hair—and horse can work. A great antiseptic to aid quick healing. Keep horses earning—get Absorbine. \$2.50 a bottle. All druggists. W. F. Young, Inc., 579 Lyman St., Springfield, Mass.

Mr. Car Owner!

YOU BE THE JUDGE

READ the comparison of construction and prices outlined below and judge for yourself. Why should anyone take chances with special brand tires of unknown manufacture when you can buy Firestone quality tires at no extra cost?

Firestone Service Dealers save you money and serve you better because of Firestone's direct buying of rubber and cotton—undivided interest in building tires—owning our own tire factories, the most efficient in the world—and the establishing of a great economical distributing and standardized service system.

Call on the Firestone Service Dealer, or Service Store today—you will get more value for your dollar!

SHRINES OF AMERICA
Lookout Mountain

THIS was the famous "battle above the clouds" fought in Tennessee in November, 1863. The fighting had been carried well into southern territory and the Confederates were hanging grimly on to Chattanooga. As the Union forces came in, the Confederates entrenched themselves high upon the mountain and in a very advantageous position. On a cold, foggy morning, the Union forces charged up the mountain and captured the highest and least accessible, most formidable Confederate position—Lookout Mountain. This was the opening break in the Confederate defense which resulted later in driving them further south into Georgia. See Decoration Day editorial on page 4.

Above to the left is the New York State monument on Lookout Mountain, Tennessee. In the circle is shown the entrance gate to Point Park at Chattanooga, a memorial to the battles fought there.

Away with spring fever! Here's *the wake-up food*

SPRINGTIME! That's the time for *quick new energy*. That's the time to eat Post Toasties. It's *the wake-up food*—and why? Because it is so easy to digest, so quick to release its stored-up energy to the body. Serve your family Post Toasties. Give them all—big and little folks alike—a brisk, bright start each day. For breakfast, send these golden flakes of crisp corn hearts afloat on pools of pure, sweet milk or cream. Delicious, you'll say, *delicious!* And just as good for lunch and for a night "snack" too. For everyday economy, serve Post Toasties—*the wake-up food!*

Crop Grower

Plant Beans Soon

When should field beans be planted in New York State? Do you advise drilling or planting in hills? How deep should they be planted?

ACCORDING to Professor E. V. Hardenburg, of the New York State College of Agriculture, most field beans in New York State should be planted between June 1 and June 10. The soil is usually too cold or too wet before June 1 for rapid germination and growth and even the latest varieties will mature before frost if planted as late as June 10.

Drill planting seems to get the best results in planting beans. Crowding the plants allows fewer pods to set and a smaller proportion of those set to mature. Theoretically the plants should be spaced about two inches apart in the row.

Beans should be planted about one inch deep in most soils, since if they are planted deeper, dwarf plants and maggot injury will result. It is often desirable to roll the seed bed particularly before planting in order to conserve the moisture and hasten germination.

Asparagus Beetles

My asparagus is troubled with beetles. Is there any spray or poison that will satisfactorily rid the crop of these pests?

BEETLE injury to young asparagus shoots may be avoided by cutting the crop clean every three to five days. In this way all the eggs deposited on the shoots will be removed before they hatch or soon afterwards. All volunteer plants should be destroyed and it will often pay to leave a row here and there uncut to serve as a trap on which the beetles will congregate, feed, and lay their eggs. Here they may be poisoned with calcium arsenate or lead arsenate. After the cutting season, plants may be protected from beetle injury by two or three applications of calcium-arsenate or lead arsenate dust, 15 pounds mixed with 85 pounds of hydrated lime.

The use of poultry for the destruction of the beetle is practiced with good results in some localities.

Kills the Quack

I WILL give you my experience with quack grass. My farm is situated in the rich bottom lands of the Genesee River Valley and quack grass thrives here better than any place I know. Here is my solution and it has worked for me and will anywhere if you follow instructions to the letter.

First begin on land that has been broken the year before. Plow late in the fall then begin harrowing with a spring tooth harrow as early as possible in the spring and keep right on harrowing, the more the better, until the middle of May. Then you can plant to corn, or beans, or sow barley. If you like, keep harrowing until later and sow to buckwheat. With this method you do not lose the use of the ground one year and the quack grass will be a minus quantity. I have tried it out and it works. Hope this will help someone solve the problem.—A. R. Mills, Portageville, N. Y.

Emergency Hay Crop

PROFESSOR John H. Barron, of the New York state college of agriculture, has recently prepared a bulletin suggesting a possible emergency hay crop that may be used in the present shortage. The new bulletins list twenty-six crops or combinations of crops for emergency use in New York State giving the time to plant, kind of soil, and special requirements of each one. The bulletin is free and may be secured by writing New York State Office of Publications, New York state college of Agriculture, Ithaca, N. Y.

Post Your Farm And Keep Trespassers Off

WE unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

Per Dozen \$ 1.00
Per Fifty 3.50
Per Hundred 6.50
Per Thousand 60.00

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

To avoid loss of cash in mail, send check or money order with order.

AMERICAN AGRICULTURIST, 10 N. Cherry St., Poughkeepsie, N. Y.

Send for free list of all plants. PAUL F. ROCHELLE, Morristown, N.J.

Certified SEEDS—Kidney, Marrow, Pea Beans, Barley, Flint Corn. E.F. HUMPHREY, Ira, N.Y.

How Do You Manage for Time to Sew?

These Letters Show How Readers Have Organized Their Work

MY one credential for offering advice on a time schedule to your reader is that I have lived sixteen years in practically the same circumstances. Perhaps I have had fewer conveniences but my husband has helped me more.

Always let your head save your heels. Have a time for thought on your work; mine is before I arise. Magazines, friends, the Home Bureau should all be watched to improve our methods. List your work in the order of its importance. Never lose sight of the fact that you are not trying merely to do all your work but to make a happy home for your family. Your husband and your daughters will remember jolly times together longer than a perfect house. Books you read to your girls and the common interests you share with your husband are the real measure of your success.

How fine that your husband believes in conveniences! Have all you can afford, water in the kitchen the very first. Maybe your husband was just the youngest son at home—now he is the partner and there are times when he can help you very much. When he goes on a drive he should take the children, and how your work can fly while they are gone! That rainy day he moved the heavy furniture, that Sunday morning he pared the vegetables, that day when you were sick and he got his own meals—praise what he does for you—and thank him. I never knew a woman who had any reputation as a housekeeper whose husband did not deserve some credit. In return, help your husband. More farm women have died young from being glued to their kitchens than working outdoors. Going after the cows is as good exercise as golf; having a garden takes dollars off the grocery bill and gives you health.

Go over your house and get rid of the woman-killers—take down the extra pictures and the fussy curtains, take up that heavy old carpet and paint the floor. Examine your cooking methods. Have dishes that your family like that do not take so much time. Fruit is better than cookies; salad in a big bowl saves dishes.

Do your hardest work in the morning. Do not start too many things at once. Your girls can do many little errands for you now. Teach them to do for themselves—pick up their toys and put away their clothes.

Best of all, have a hobby. Many will not agree with me but I feel that if we have some real interest outside our work it keeps us young and fit, a flower garden, patchwork, astronomy, or what-

ever interests you that you keep on working at and learning.

Take each day calmly and serenely, do the best you can and order will come.—MRS. B. M., N. Y.

* * *

Some Things Must Be on Time

I DON'T believe your problem individual but most common with us mothers (housewives may solve it.) My two oldest children lack two weeks of being one year apart. For a few months I was planning and preparing thirteen meals each day, feeding ten of those to babies, and, out of necessity, actually taking time to eat a portion of the other three. Add washings and all the rest to that program and try to have a time schedule!

Now with those two, four and three, we have twins five months old. Is the plan any nearer being solved? Yes and no. I have learned to wash (electric the last couple of months) the evening before so that the rinsing and hanging out can be done before dinner the next day. Of course there are three or four each week. I've learned to drop everything and ride to town with all my family when the opportunity arrives—oh! and really enjoy living but—and here is where our schedule comes in.

Baby's feedings, baths, naps, bedtime, cod-liver-oil, orange juice, etc., all are on time. Our own three meals are as well planned as I know how to make them (two vegetables besides potatoes and all the rest—you know the rule)—and also on time. Everything that helps to keep us physically fit is attended first and the rest made to fit in where it will. Heaven forbid a schedule that keeps me from reading "The Little Red Hen" or playing "The Three Bears" because it's time to wash dishes or sweep the third floor

(Continued on Page 14)

From Real Experience

Some time ago, one of our readers of Aunt Janet's Counsel Corner asked for suggestions from other readers as to how she might save enough time from her other work to get ahead with the sewing for her family consisting of her husband, herself, and two little girls aged three and five. She had found that her fine, romantic, girlhood ideas of keeping house, cleaning, cooking, sewing, gardening, etc., had never quite materialized because she found herself running from one task to another all day long, and yet was never entirely done. Days were never long enough to do all the things that crowded in, and in order to help this reader, her letter was published which brought forth a fine collection of letters from readers who wished their experiences to be of help to this young mother. Prize winning letters have already been published, but here is another collection of experiences which should prove helpful, not only to the reader who asked for help, but to others as well. We hope so, at any rate.—Aunt Janet.

Vacation-Time Is Coming

Will It Be "Wreck" or "Rec-reation" for your family?

VACATION time is surely coming, to the school children at least. Such a break in the regular routine can be made a distinct step in the progress of the children and a lot of fun for the parents, or it can be just a succession of interruptions and "what can I do next." Many wise things have been said about play. Here are some of them:

"The family that plays together, stays together."

"In my opinion the great opportunity for the development of a child's character lies in the proper attitude toward play. The playground in many respects is more valuable than the classroom. Play gives an opportunity for the free expression and development of the child's life."

You can see from these comments that play is no longer considered the inventions of the "evil one" as it was in the days of our stern Puritan forefathers.

As remote as it may seem from a busy farm in the summer time, more and more leisure time is coming to us all. To know what to do with leisure time so that it is a help and not a real detriment to us physically and mentally, requires some planning and thought.

Recently the National Recreation Association celebrated its twenty-fifth birthday. This organization was founded twenty-five years ago, by such leaders in social uplift as Luther H. Gulick, Jacob Riis, Jane Addams and Joseph Lee. These wise people were sagacious enough to know that idleness is vicious and where people are gathered together without any purpose, mischief is apt to result.

The avowed purpose of this organization is, "That every child in America shall have a chance to play. That everybody in America, young or old, shall have an opportunity to find the best

and most satisfying use of leisure time," and their twenty-five years of activity show that they have many achievements to their credit.

During that period, many cities have organized playgrounds for their young people, schools have come to regard a playground and athletic field

Photo by Ewing Galloway, New York

This small girl, head down on a horizontal bar, was photographed in one of the playgrounds of Greater New York. Almost any farm home-site would allow room for this piece of apparatus which means not only fun, but healthy, normal development as well.

as an absolute necessity. Trained recreational workers have been developed for directing community music, community drama, women's and girls' activities, play in institutions, and recreation for colored people. They have published some very fine and helpful books on the subject of play and community activities. Their books which would be of particular interest to our rural readers are "A Rural Recreation Handbook" and "A Book on Home Play."

In addition to their trained workers and their helpful printed material, the Association conducts a nine months' graduate course in recreation leadership for fifty selected men and women at their National Recreation School in New York City.

The fact that the Association has worked and striven as it has and can point to so many successful efforts, is because it was designed to meet a special need of the community.

People living on separate farms may wonder how they would benefit from recreational activities which seem largely centered in villages and cities, but there is just as much need on the farm as elsewhere for understanding the value of play for the young and old as in any other locality. Naturally more of the responsibility has to be shouldered by the mother, and a certain amount of equipment does make it easier for her. Equipment similar to that used at playgrounds can easily be made at home and need not be expensive. See-saws, swings, "gym" rings, and even slides can be improvised by an interested Daddy. Just to make sure that rainy days are provided for, some of this equipment might be set up in the barn loft or in the attic. In some homes, a "rainy day box" is brought out only in weather too inclement to permit the children outdoors.

Decoration Day

A WEEK or so ago, we were at a railroad station in New Jersey and watched an old blue-coated Civil War veteran hobble painfully up the platform. While watching him, memory carried us back across thirty or more years to boyhood days and the time when Decoration Day meant more than a Roman holiday with a baseball game; when large parades of marching men in blue, led by a cavalryman and a martial band, went down the village street to the cemetery to decorate the graves of soldier dead and to renew again the faith in the principles for which those dead fought and sacrificed.

Each succeeding Decoration Day rolls the Civil War farther into the remote past, until now the Grand Army of the Republic parades no more. And the principles for which they and other soldiers of this Republic fought—what of them? When the time comes when we of this day must make an accounting for the torch of freedom flung to us by our soldier dead, what shall we say? Have we carried on, or were the sacrifices of our fathers all in vain? It is a good question for Decoration Day, but few will give it heed.

Time was, in this America of ours, when the way was clearer and there was more happiness than now. Time was when the harder a man worked, the more he had. Not so now. Machines, over-production, inefficient distribution, too many people, bitter competition, thousands of unemployed, thousands hungry, too much wealth in too few hands, all these and more add to our perplexities and to our unhappiness. "Where do we go from here?" is a question in nearly every heart.

The historian knows that it is in such times of great economic upsets that other and more serious upsets come. There were many hungry people in the cities last winter. If times do not improve, there will be many more this winter. If your baby were starving, would you sit idly by? What then can you expect from thousands of city workmen, many of whom can hardly speak the language?

What to do? No one knows what the whole answer to these troubles is. But of one thing

you can be very sure: if this nation is to endure, it must return more to things of the spirit and be less material. We must go back to the fundamentals on which the country was founded and for which its citizens lived and died. These fundamentals too many of us seem to have forsaken. What are they?

1. Real reverence of things religious but with tolerance of the other fellow's religious beliefs;
2. Respect for home—less divorce;
3. Equality of economic opportunity with less centering of great wealth in a few hands. Great wealth can be as powerful as an absolute monarch.

4. Less government in work that should be done by the individual, with fewer laws and lower taxes;

5. Swift justice to evil doers.

Yes, you say, you are right. But how are we to return to these principles? By thinking about and acknowledging our responsibilities as citizens of a great Republic. The world in general and America in particular must have a great spiritual overhauling. Out of our present troubles we are going to emerge better than ever, and on you farm people especially falls the responsibility for leadership, for clear, sane thinking and for holding the nation steady—the responsibility of handing on to our children an untarnished heritage, passed to us by our fathers who died that we might inherit a nation founded on justice, "domestic tranquillity," and an equal opportunity for happiness for every good citizen.

Wages Must Be Reduced

WITH butter at less than 25c a pound on the farm, eggs selling for from 15c to 20c a dozen, wheat at 40c a bushel, and cotton at 10c a pound, farm prices are at the lowest point that they have been since the early 90's. But at that time everything the farmer had to buy was also low in price. A dollar then was a lot of money and had much purchasing power. Today, nearly everything the farmer buys is still high in price. Why—because of dealer profits? Not necessarily. Some of those handling farm supplies are just about as hard hit as the farmers. Even where there are large dealer profits, they are only one factor in the high prices of farm supplies.

The real reason is the high wages which have not been adjusted to meet the present situation. See how wages affect milk prices. Where dairy farmers are well organized they are getting about 3½c to 4c a quart for milk. When it is sold in the form of butterfat, unorganized farmers do not receive much over 2c a quart for it. On the other hand, the consumer often pays as much as 15c a quart, nearly five times as much as the producer receives. Why? Chiefly because milk has to be handled by labor many times after it leaves the farmer until it reaches the consumer, and every time it is handled, a labor charge is added which is just as high as it was during the World War.

Just one of these labor charges in handling milk is that for the salary of milk drivers. These men, without a cent of investment, are receiving approximately \$60 a week, far more than the dairyman receives with all of his investment and responsibility.

The wisest economists say that we are never going back to the old high-price level. Prices will be stabilized on a lower basis. Therefore, the insistence on the part of politicians and labor leaders that wages should not be cut is holding back the return of good times and is bad for the laborer himself. A dollar a day is better than no pay. Hundreds of thousands of idle men might better be working for lower wages than not working at all.

The theory that reductions in wages will continue the hard times, because of the lessened purchasing power, is nonsensical, because the workman will have more purchasing power with a job at slightly lower wages than he will have with no job at all, and because the dollar goes

farther in buying food and clothing (farm products) than it did a year ago.

With all of this talk of non-employment in the cities, try to hire a plumber, as we did recently, or any other tradesman, and if you do not get mad when you pay the bill, you are better tempered than we are. What is the result of this feeling? Answer: you either tinker up the plumbing job yourself next time, or you let it go entirely. There are millions of jobs in this country that are being let go temporarily until wages get on a more reasonable level.

This publication believes in organization, including labor unions. We do not believe there should be drastic wage cuts, but we are sure that it would be better for the labor unions themselves to take the lead in fair and moderate wage reductions than to continue to hold up adjustment of the present economic troubles by demanding wages that no business can pay.

Further than this, there can be no permanent prosperity of one class at the expense of any other. For years now, farmers have been holding the bag. They are continuing to take their medicine with the lowest farm prices that have prevailed in a generation. Permanent prosperity for all will come when all share and share alike, which means that farm prices must be adjusted upward somewhat and labor prices reasonably downward.

When Weeding Is Not Work

EACH year the beauty of springtime and early summer is borne in upon my mind with a new vigor. This year because the new bulbs which I planted last fall have already bloomed in all their beauty, the year seems started on the right foot. To me an hour or so with the flowers is just as refreshing as golf is to the businessman who wants a change from his office. It is merely an answer in another form to the old, old need of mankind for a hobby, whether it be in the form of flowers, or a well-placed stroke at golf, an especially fine cow, or hens that break the record in laying.

The line between work and play is very finely drawn. Work for one is play for another. It might be work for some to weed in the flower garden but for me, I keep thinking about the fine flowers I hope to get—and semi-occasionally do—and I sort of forget that weeding is work. Even if I am reminded afterwards by an aching back and sore muscles that it *was* work, I have had the fun of losing myself for a while in a world different from the daily routine. It is this change of thought and activity which is refreshing and the summer will be brighter and the hours of regular work less fatiguing because I know there is that retreat whenever I can find a few minutes to retire to it.—G. W. H.

Why Oleo Is Dangerous

IF sometimes you wonder why there is so much talk about the menace of oleomargarine to the dairy industry, remember that 350,000,000 pounds of oleomargarine is spread annually on American bread, according to H. R. Shoultes writing in *Holstein Friesian World*. This 350,000,000 pounds of oleomargarine takes the place of the production of 1,250,000 cows. It replaces 50,000 dairy farms, each carrying 38 head of cattle. They would consume 6,000,000 tons of hay and 2,500,000 tons of grain.

After reading that mouthful of figures, you can understand why the whole dairy industry insists that at least oleomargarine shall stand on its own feet and not be allowed to imitate butter.

Aunt Janet's Chestnut

UNCLE JOHN, the little boy's favorite uncle, was going to be married on the following Sunday and there had been considerable discussion about the wedding in the household. Very naturally the boy was interested and had asked his Mother several questions about the wedding. "Mother," he said, "the last three days they give them anything they want to eat, don't they?"

Clothes for Vacation Time

Even Though You Stay at Home New Things Come in Handy.

JUST about this time of year, the busy farm woman has to pause a moment in her mad career of tending baby chicks, finishing up spring cleaning, hanging the new curtains, getting the garden well started and do something definite about summer clothes for the family. School will soon be over and perhaps one member or more of the family will be taking a real vacation. The

lay-out of patterns on this page is designed to meet just such a need. But no matter whether a formal two weeks' vacation is forthcoming or not, the articles pictured here will fill practically all the ordinary demands of an adult woman, and the most important vacation needs of the little folks.

We take it for granted that to go vacationing, there will be travel of some sort. In such cases the jacket suit with attractive blouse is in high favor. Wool tweed is excellent for cool days, but for real summer weather the cotton tweed, cotton mesh, linen, or pique would be cooler. The lingerie blouse of cotton or linen is cool and dainty, but it does require constant pressing to keep fresh. For that reason, a silk blouse looks fresh for a longer time.

It would not be a vacation if there were not sports of some sort, tennis, hikes, boating, or golf. For this reason, a distinctly sports type of dress belongs in every summer wardrobe, even if one plans to do nothing more sporting than have a picnic supper on the beach occasionally with the family. A sports dress calls for a material of some weight and the appearance of enough strength to withstand the activities of the game. Shantung, especially figured or brocade, is excellent for this purpose. Silk shantung is the standard, but there are many attractive cotton shantungs on the market. Linen, pique, cotton broadcloth, either plain or printed, can be worked into the most attractive sport costumes. Such a sports costume calls for shoes of a sport type, not a dress shoe. This means that a comfortable heel and somewhat heavier soles and possibly a fabric is used for making the shoes. A beret or hat of the sports type belong with such a dress and shoes.

But no summer is made up entirely of sports. There will be afternoons, when a chair on the porch is most inviting. For such occasions as this, a dainty material made up in a more frilly design is in order. Printed batiste, voile, lawn, and dimity need not be expensive and can be had in charming patterns. However, any cotton or linen material must be kept pressed and crisp in order to look at its best. Silk will be somewhat warmer, but has the advantage of looking fresh longer. The heavier silk crepes are having quite a vogue just now, the Marillyn and the Roma being examples of such crepes. The printed or plain chiffons are much in favor for afternoon wear and for gatherings of a semi-formal nature. A dainty dress calls for daintier shoes than

are used with a sports dress. Heels can be higher and the soles lighter, because it is assumed that the wearer will not participate in stirring activities. A hat somewhat more trimmed and less sturdy looking will be in order.

But the summer time does not consist altogether in sports or porch or party activities. Usually the lady has some plans of her own for the morning. A morning or house dress is always useful and can be made delightfully attractive in color and design. Dimity, lawn, percale, or the heavier materials of pique and cotton broadcloth come in wonderful patterns and color combinations. Even if the dress is used only for work purposes, there is no reason why it should not be as charming in its own way as a dress which is used for formal evening wear.

When the home dress maker comes to express her individuality and her yearning for beauty, she usually likes to demonstrate these on an evening dress, either for herself or her daughter. The soft femininity of frocks this year allows plenty of range for this sentiment and it is surprising how well she can express herself without getting into a design which is too complicated to master.

Circular flounces and capelet sleeves, modified according to the size and build of the wearer, give a softening effect which properly goes with an evening dress. Soft materials which drape themselves gracefully, chiffon and the thinner crepes are always popular. For strictly summer use, organdie with its crispness and in delightful shades can be used to advantage. All-over lace, and cotton net over a colored slip are also in vogue just now. These are usually supplemented by lace mitts of the old fashioned type, for the old-fashioned lady with bust and hips has come back, in contrast to the flat boyish form which has prevailed for the past few years.

The matter of underwear is fundamental to the wardrobe, because the fit of the dress depends so much on the fit of the slip underneath it. The straight box-like slips do not serve this purpose, for a slip needs to be fitted at the waist

and yet must have sufficient fullness at the hem line to hold its own with the sheer fabric above it. The most satisfactory materials used for slips are silk crepe, radium, and heavy crepe de chene. A pure silk will stand wear best, but the rayon mixtures are not so expensive and if due allowance is made for shrinkage, the difference in cost often makes up for the possible inconvenience of shrinkage, but that must be taken into consideration in making any garment of rayon which is to be washed. When a rayon article is bought at a reliable department store one is always advised to dry-clean the article rather than to wash it.

No wardrobe is complete without some sort of lounging garment. Pajamas, of course are very popular with the young things, but a robe is necessary if one travels by train and where luggage is limited, one lounging garment is about all that can be taken. Silk is very satisfactory because it packs tightly and does not wrinkle badly. However, there are delightful cotton crepes in the market in the most appealing colors which have the further advantage of washing frequently and well.

The children will be using the summer for delightful play time, whether they spend it at home or at some vacation point. A play suit or rather a galaxy of play suits will solve the mother's problem to a large extent. These little play suits can be made of wool or cotton jersey, of figured cretonne or linen, Kiddy cloth or of prettily printed percale. The little coat is a great adjunct, for often a chill wind springs up which demands that little children's shoulders and backs be covered. The trunks could be made of figured material and the coat of plain or vice versa. Such little suits are used for boys and girls alike. But if little sister wants something that proves her femininity, a play apron of prettily colored print will take the place of a dress.

Of course, sister will have her formal moments also, and the capelet dress without sleeves

4-WAY PROFIT ON TRUCK

YOU don't have to be told the value of quick-acting nitrogen for your truck crops. You don't have to be shown how much time and how much labor it saves. And this year it plays an even more important part than ever in the growing of money-making produce.

Chilean Nitrate of Soda is the quick-acting nitrogen that truck crops prefer. It gives you more crop profit, even in the face of low prices, because it helps crops in at least three important ways...

- 1—Makes better truck
- 2—Makes earlier truck
- 3—Increases yields, thereby reducing growing costs per unit.

Chilean is the *natural* nitrate. Because of its natural origin it contains so-called "impurities"—Iodine, Boron, Magnesium, Potassium, Calcium. Each of these is a plant food in itself, which adds its value to the nitrogen. Chilean Nitrate is a super-nitrate because it is Nitrogen PLUS.

In writing for literature or information, please refer to Ad. No. K-18

Photo shows field of lettuce top-dressed with Chilean 10 days before cutting crop.

Chilean is now packed in 100 lb. bags for greater convenience. Easier handling. Better condition of bag and contents. And the price combines economy with convenience. Chilean comes in two forms—Original Chilean (Crystals) and Champion Brand (pellet nitrate).

With the A.A. Fruit Grower

Raspberries for the Garden

I would like to grow raspberries and know nothing about them. Will you please give me some information on their culture?

RASPBERRIES are preferable grown on sandy loams, but almost any loam soil will give satisfactory results. The young plants should be set out two to three feet apart in rows six to eight feet apart. Cut off all the canes on the new plants when they are set, to remove any possible disease. New shoots will start from the buds on the crown of the root system.

Cut off the dead tips in the spring, leaving the canes about four feet in height. As soon as the crop of fruit is gathered, cut out and burn all the fruit and canes. Take out all weak shoots, leaving only the strong new shoots for producing next year's crop. In very cold sections, it may be wise to bend over the canes in the late fall and cover with straw. In the spring the covering should be removed and the canes straightened. Cultivate clean throughout the season or follow by a cover crop.

Stable manure is the best means of fertilizing. However, to stimulate the plants, 100 to 200 pounds of a nitrogen carrier per acre, spread broadcast early in the spring is satisfactory.

Recommended varieties of red raspberries for New York are June, Herbert or Cuthbert; purple raspberries—Columbian; and black raspberries—Cumberland for mid-season, or Plum Farmer.

New Strawberries

THREE new strawberries have recently been introduced by the state Experiment station at Geneva, two that are especially promising for preserving purposes, while one promises to be an excellent marketing berry.

Caledonia and Culver are excellent quality berries and lend themselves to home preserving.

Camden is a general market berry and is especially notable for its extreme vigor and plant-making qualities.

Ringing Trees to Force Blooming

A neighbor of ours told us that ringing the trunk of our apple trees would make them bloom. Is this true and what is the proper method to follow?

YOUNG orchards which have reached the bearing age and persist in failing to blossom may be induced in some cases by ringing. The ringing consists of drawing a knife around the limb or trunk cutting through the bark to the wood. A ring of bark is not removed. This operation interferes with the flow of the plant food downward to the roots and increases fruit bud formation.

Ringing should be done during the latter part of the blossoming period or soon afterward and should be done only on trees that persist in not blossoming.

Alfalfa in the Orchard

What is the possibility of using alfalfa as a sod mulch in a commercial orchard?

ALFAFA seems to give good results and should be put in in June and July. It is necessary to reseed every three or four years on account of the blue grass that comes in. Special pains to seed thick enough to get a good sod is necessary, probably fifteen to twenty pounds per acre would be sufficient. It is better to put in too much than not enough.

Cultivation and Color

Is there any relation between the color of apples and the time when cultivation is discontinued?

YES. There is a distinct relationship and as an aid to increasing color cultivation should be discontinued about the middle or latter part of June. Later cultivation tends to keep the fruit growing, which means it interferes with the development of proper color.

Organic Material for the Orchard

Are cover crops more advisable in a young orchard than in an old one? Why is this?

IT is easier to build up a supply of organic matter in a young orchard than it is in one that is mature. The reason for this, of course, is that heavy cover crops cannot be grown on areas which are heavily shaded by the trees. As organic matter is important in orchards principally because of its moisture holding capacity, it is a good idea to make hay while the sun shines and build up the supply of organic matter in the young orchard by growing and plowing under cover crops.

Spray Controls Anthracnose

Will spray help to control anthracnose on my raspberries and will it help prevent infection on new canes?

ACCORDING to experiments in Indiana by the Experiment stations there, the spraying of raspberry canes with lime sulphur when the young leaves are 1/4 inch long will satisfactorily control anthracnose. One gallon of the liquid concentrate should be used to ten gallons of water. In a test plot ninety per cent of the young canes sprayed were free from infection, while ninety-five per cent of the unsprayed canes were diseased.

Discontinue cultivation early. Late cultivation delays maturity and makes it more difficult to get a satisfactory cover crop.

With the A. A. Dairyman

Shipping Calves by Express

CALVES are shipped long distances in these days by express and probably 95 per cent of them survive the trying ordeal. More animals are lost because of the treatment given them the first few days after their arrival than because of exhaustion or otherwise on their long journey. Mostly, such as become sick after they are taken from the crate are the victims of too much kindness—well intended, of course, but fatal none the less.

Calves shipped by express are often quite exhausted by the time they reach their destination. It sometimes happens in the case of long shipments that the young creatures have been two days, or even more, without food. In truth, however, most of them probably suffer more from the noise and confusion incident to their long journey than they do from lack of food.

Calf Needs Rest and Quiet

It is because of their trembling legs, when they are taken from the crate, that most people who receive such animals for the first time are moved by pity to give them something to eat. If the calf has sense enough not to eat, food is sometimes administered through force—wholly, of course, from a feeling of pity or kindness. And this usually, is about the worst thing that one can do—so far as the young animal is concerned.

What the calf needs most of all at such a time is complete rest, quiet and isolation. It may be given a little water, but milk or other milk substitute foods should be withheld. Put the creature in a box stall, if possible, with plenty of fresh, clean straw. Close the door and permit no one to enter the stall for several hours. These hours are critical, sometimes, in the animal's welfare, but Nature will solve the problem through sleep and complete relaxation. Let the calf doze and sleep until it begins of its own accord to try to get on its feet or to move about in the stall. At this time it can be given a little warm milk.

Light Feedings Advisable

Here again, however, caution should be used. Small feedings will get the animal ahead much more rapidly than

larger ones. At first give not more than a pint of milk and do not force the animal unnecessarily. Let the craving for food remain partially unsatisfied for a time. Otherwise bowel trouble probably will set in and this, in the animal's weakened condition, will result either in a dead or stunted calf. After a day or two normal feedings may be given.

It is quite wonderful how rapidly a calf will recover its strength and vitality if it be safely tided past the first two or three days following its receipt from the express company. A dealer in mail-order calves who has shipped several thousand of them to purchasers in various parts of the country once stated to the writer that if the facts which have been given here could be fully understood by those who buy calves at a distance there would be little cause for regret even in the case of extremely long shipments.—O. C.

Grinding Roughage for Cows

What Experiment Stations recommend the grinding of roughage? Will ground roughage produce more milk than it will not ground?

THE Maryland Experiment Station has conducted quite an extensive test on ground roughage. They report that cows fed on ground hay produced 1.31 per cent more milk and 4.84 per cent more butterfat than they did when fed on hay not ground. Cows refused nearly 30 per cent of the unground hay and refused only about 11 percent of the ground hay. However, considering the cost of grinding the hay, the profit was negligible and not sufficient to recommend the practice.

On the other hand, of course, there have been some more favorable reports on the grinding of alfalfa. The Pennsylvania Station reports that the nutrients in ground hay are slightly more digestible with the exception of crude fiber. The Walker-Gordon Farms report rather favorably on their plan which is to draw alfalfa green, then to dry it artificially and grind it immediately. It is then stored in bags.

High yield per cow is the basis for profitable milk production. Cows producing less than 200 pounds of butterfat fail to pay for the cost of feed and labor.

Belle Buoy's Violet of City View, a fourteen-year-old Guernsey cow that has just made a new world's record for production for cows over twelve and a half years of age. Her total production for 365 days was 17,234.7 pounds of milk and 958.5 pounds of butterfat. The cow is owned by J. C. Penney of Emmadine Farm, Hopewell Junction, New York. She consumed two tons of grain during the year's test. Her weight at the beginning of the test period was 1260 pounds, while at the end of the year she weighed 1490 pounds.

Costs 26% Less -Raises 30% Heavier Chicks

ED. MOORE, of Syracuse, N. Y., is a business-poultryman who makes sure that he is using the most profitable feed.

So this spring he divided 1400 chicks into two lots, feeding one lot on B-B Daisy Starter and Growing Feed and the other on a higher priced competitive feed.

His weight averages for the two lots during a test period of 8 weeks tell a remarkable story for the productiveness and economy of B-B Daisy Feed. Here is the record:

	Average weight of chicks fed on B-B	Average weight of chicks on other feed
At 2 weeks	5 oz.	4 oz.
At 3 weeks	8 oz.	7 oz.
At 4 weeks	12 oz.	10 oz.
At 5 weeks	16 oz.	15 oz.
At 6 weeks	22 oz.	19 oz.
At 7 weeks	28 oz.	24 oz.
At 8 weeks	35 oz.	27 oz.

So at 8 weeks of age the chicks raised on B-B Daisy Starter and Growing Ration weighed an average of 30% more. But the cost of the B-B feed was 26% less than the competitive feed, a remarkable example of the productiveness and economy of B-B All-Mash Daisy Starter and Growing Feed.

Complete Line of Guaranteed Feeds

B-B Daisy Starter and Growing Feed is but one in the complete line of B-B Poultry Feeds, all of which are guaranteed most productive per dollar of feed cost or money

refunded. Thousands of poultrymen are using B-B Vitamized All-Mash Chick Starter Ration, proved by conclusive tests to produce 26% extra weight during a chick's first six weeks. These poultrymen follow along with B-B Vitamized Broiler and Growing Ration, which contains all of the Vitamins, mineral balance and health giving concentrates required by the growing bird and at maturity they put their flocks on B-B Vitamized Laying Mash, the proven producer of more eggs.

Two Feeds Needed Right Now

Two other feeds that we particularly recommend to poultrymen at this season are B-B Coccidiosis Control Mash, for the prevention and treatment of Coccidiosis and B-B Broiler and Crate Fattener, a feed for finishing off birds before marketing. Tests prove that this remarkable feed adds 30% to 50% of weight in 10 to 16 days!

Feed the complete line of B-B poultry feeds. Your local B-B dealer will supply you and will refund your money if you try the feed and your figures prove that it doesn't do everything that we say it will.

Reviewing the Latest Eastern Markets

Milk Prices

May Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk (Metropolitan area)	2.90	2.70
2A Fluid Cream		
2A Fluid Cream	1.66	
2B Cond. Milk		
Soft Cheese	1.97	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.50	1.30
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese		

The Class 1 League price for May 1930 was \$3.00 for 3.5% milk and Sheffield's \$2.80 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

A Correction in Milk Prices

An error in the issue of May 23 quoted the League net cash price to farmers as \$1.50 per hundred. This should have been \$1.58 per hundred for 3½ per cent milk.

Butter a Shade Lower

CREAMERY SALTED	May 23, 1931	May 16, 1931	May 24, 1930
Higher than extra	24 -24½	24½-25	33¾-34¾
Extra (92 sc.)	23½-	24 -	33½
84-91 score	19½-23	20½-23½	28 -32¾
Lower Grades	16 -19	19 -20	26½-27½

On May 23, the butter market closed a fraction under the close of the week previous, following fluctuating trading and prices from the opening on the 18th. During the week ending May 23, there existed a more confident feeling on the part of many operators. This was manifest in the speculative interest that has prevailed. Speculative buying plus the demand for current use served to clear the arrivals satisfactorily and keep the market free of accumulations. In spite of this there is a feeling of conservatism and a desire to keep the market about on the present level.

On Monday, the market opened rather weak under free offerings which created a pressure to sell and prices declined to 23c for creamery extras. This low price brought to life a buying interest and a firmer tone took place of the easiness. This situation developed into a price advance on Wednesday when creamery extras went to 24c which price they held throughout Thursday. Thursday afternoon the market turned easier and on Friday the price slipped to 23½c on 92 score butter. On Saturday it was difficult to hold the price for an easier tone came over the market. It looks as though Monday will open up no differently.

On May 22, the ten cities making daily reports had on hand 12,855,000 pounds whereas a year ago they held 19,895,000 pounds. From May 15 to May 22 the into-storage movement totaled 2,356,000 pounds whereas during the same period last year storage stocks were increased 4,108,000 pounds.

Cheese Market Steadier

STATE FLATS	May 23, 1931	May 16, 1931	May 24, 1930
Fresh Fancy	12-14	12-14	18-19
Fresh Average			
Held Fancy	21-22½	21-22½	24-26
Held Average			23-

There is just enough improvement to the undertone in the cheese market for us to recognize a steadier situation. Most of the wholesale business in fresh New York State whole milk flats has been at 13c. Wisconsin prices have been steadier on fresh cheese. Furthermore, there has been a little more trading in New York in fresh goods. Old Junes are hard to buy, the owners being very indifferent to sell except at full prices.

Storage stocks are working out satisfactorily although some new cheese is beginning to accumulate. On May 21, the ten cities making daily reports had on hand 9,928,000 pounds of cheese whereas on the same day last year they held 11,910,000 pounds. From May 14 to May 21 storage holdings in the ten cities were reduced 218,000 pounds, whereas during the same period last year, holdings were reduced 94,000 pounds.

Egg Situation Appears Slightly Better

NEARBY WHITE	May 23, 1931	May 16, 1931	May 24, 1930
Hennery			
Selected Extras	22 -24	22 -24	30 -31½
Average Extras	21 -21½	20½-21½	28 -29
Extra Firsts	20 -20½	19½-20	26½-27½
Firsts	18½-19½	18 -19	25½-26
Undergrades	-18		-25
Pullets			
Pewees			
NEARBY BROWNS	May 23, 1931	May 16, 1931	May 24, 1930
Hennery	23 -25	21½-24	26½-30½
Gathered	18 -22½	18¼-21¼	24½-26

Although there has been no material change in the egg market in New York

City since our last report, there is a certain definite improvement in the basic and national situation. The chief improvement experienced during the week ending May 23, took place in that classification known as "mixed colors". This product comes principally from the Central West where advices indicate a rapidly increasing shrinkage in the lay. Western paying prices have advanced quite rapidly. Chicago has been above par with New York all week long. That situation cannot exist for any great period without creating a reaction here in the East.

Trade in New York City has not been particularly satisfactory, principally due to the Jewish holidays. Most dealers are said to appreciate that the outlook is slightly better, but they fear that the consumption of eggs will be interfered with if any higher wholesale rates are created, which are likely to result in a considerable revision of retail prices. The wholesale trade is correct in this fear for it seems to be the case that when wholesale prices advance one cent the retailers boost the cent several times.

Nearby eggs have not shown any material improvement. There has been no shrinkage in the receipts from nearby points. These nearby and Pacific Coasts in some cases have actually failed to clear. We look for the improvement to come next week. On May 22 the ten cities making daily reports had in cold storage 3,990,000 cases of eggs whereas on the same day last year the same cities held 4,261,000 cases of eggs. From May 15 to May 22 holdings in the ten cities increased 329,000 cases, whereas during the same period last year the increase in the holdings totaled 413,000 cases.

Live Poultry Market Closes Easier

FOWLS	May 23, 1931	May 16, 1931	May 24, 1930
Colored Leghorn	-23	-23	27-28
White Leghorn	-21	19-20	25-26

DUCKS, Nearby	15-24	18-24	19-23
GEESSE	-12	12-13	12-14

The live poultry market opened up on May 18 in fine style and held splendidly for the first three days during which time colored fowls sold for 25c and Leghorns ranged from 21c to 22c. On Thursday, as would be expected just before a holiday, the market turned and became easier, which was followed up on Friday and Saturday. On the 22nd and 23rd the Jewish people celebrated the Feast of Weeks.

Bean Market Slow

Trade in the bean market has been very slow, the bulk of the buying of both domestic and imported goods being of a hand to mouth character. Even the canners have been taking only such goods as are immediately needed. This leaves the market in a very unsatisfactory and weak condition. Supplies of domestic pea beans are said to be very light. Other varieties are trending lower. Marrows (Jumbo) range from \$5 to \$5.75, Average \$4 to \$4.75. Pea beans are still selling at \$4.50 to \$5, Red Kidneys \$7.50 to \$8, White Kidneys \$5.75 to \$6.25, Limas \$6.75 to \$7.50.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Hay Market Easy

The hay market was easy during the week ending May 23. Receipts were fairly

liberal and slightly in excess of an extremely slow demand, which depressed prices about \$1 per ton. Small bales have been very difficult to move. The market closed about steady, barely that and no more. Straight timothy grading No. 1 is scarce. Most of the buyers were satisfying their needs at or under \$23 per ton for No. 2 hay. No. 1 timothy was quoted at \$25 to \$26 with lower grades from \$20 to \$24. Timothy carrying a light mixture of clover ranged from \$20 to \$24, while grass mixtures ranged from \$19 to \$23. Sample hay ranged from \$13 to \$18. Rye straw is in good demand at \$19 to \$20 per ton, oat straw \$13 and wheat \$12.

Meats and Livestock

CATTLE—Load medium 1222 lb. western fed steers steady at \$7.60. Cows scarce, easier. Common to medium cows \$3.75-4.50; low cutters and cutters \$2.00-3.50. Bulls scarce, steady. Cutter to medium bulls \$3.50-4.50.

VEALERS—Scarce, steady. Small lot good 151 lbs. New York vealers \$9.00.

HOGS—Steady. Good choice 160-220 lbs. \$7.50-7.75.

LAMBS AND SHEEP—Spring lambs in fairly liberal supply, largely 50c lower. Good to choice Virginia and West Virginia Springers \$11.25-12.00. Common throwouts \$9.00. Ewes steady. Good grades up to \$3.00. Culls down to \$1.00.

COUNTRY DRESSED CALVES—Receipts were moderate to light during the week. Trading was slow all through with a decline on tops and an advance on small toward the end of the week. Market closed weak on tops steady on small. Fresh receipts per pound: Choice 11-12c; fair to good 10-11c; small to medium 8-10c.

HOTHOUSE LAMBS—Receipts moderate to light during the week. Demand slow and for fancy only. Market steady, at \$3.00-7.00, each.

LIVE RABBITS—Receipts light to moderate during the week. Demand slow. Market closed steady at 15-20c per pound.

MAPLE SYRUP—Market steady. United States Commercial Standard, graded and filtered per gallon: No. 1, \$2.25-2.35; No. 2, 1.75-2.25; No. 3, 1.65-1.75. (Farmers run equivalent to No. 3), Sugar in casks, farmers run 20-25c.

WOOL—New York better fleece wool, unwashed, fine, per pound: 18-25c; ½ blood 18-25c; ¾ blood 18-22c; ¼ blood 18-21c; low quarter blood, 17-19c; common and braid 16-18c.

Farm News from New York

Distribution of TB Appropriation---Hail in Southern Tier

THE appropriation for TB testing made by the Legislature for cattle indemnity purposes during 1931 has been allocated to the various organized counties. Some counties have received orders to proceed with initial tests up to a definite number. After this number has been reached, such counties will be required to confine their operations to the re-testing of herds already operating under the ac-

templated for next year and a steady increase to a maximum of about 150,000,000 trees in 1944 if the enlarged program set up in the Hewitt amendment to the state constitution gains approval of the voters of the state this year.

Ontario Fair Grounds Sold

THE Ontario County Agricultural Society is now, after an existence of ninety-one years, out of the picture. The sale of the Canandaigua Fair Grounds to the Fort Hill Land Company for \$11,500 marked its passing. Lack of interest in annual fairs together with the growing deficit prompted the members to retire from the fair business and liquidate the debts of the society.

4-H Boy Aids Conservation

THE honor of being the first 4-H club member to find a nest of grouse, reported to the State Conservation Department, goes to Lawrence Ambler of Madrid, St. Lawrence County. This survey, in which many farm boys are enrolled, is going on in several counties of the state and results so far promise excellent progress in learning the causes of depletion of partridges.

Boy Scouts Elect New Head

MORTIMER L. SCHIFF, for many years Vice President of the Boy Scouts of America, was unanimously elected President by the National Council members at the annual meeting of the movement at Memphis, Tennessee, May 5th and 6th. He succeeds Walter W. Head of Chicago who, after five years of service, declined to permit his name to be offered for re-election. All scouting is looking forward to another prosperous season under the leadership of Mr. Schiff.

Travel Expenses of Horse-shoe Contestants to be Paid

SEVERAL weeks ago we announced the 1931 New York State Horseshoe Pitching Tournament at the State Fair, under the auspices of American Agriculturist and the Farm Bureaus. Since that time letters have been coming in from County Agents, announcing that their county will be represented this year. It looks now as if at least as many counties as last year would be represented and quite

probably the number will be greater than last year.

Someone has raised the question as to whether or not the expenses of these men will be paid. The arrangements will be the same as last year, namely, that the railroad fare of one contestant from each county to Syracuse and return will be paid by the State Fair Association, but no other expenses. All contestants, of course, must be certified to by the County Farm Bureau Agent.

Western New York Notes

C. N. ABBEY, Farm Bureau Manager of Cattaraugus county is leading a campaign for more dairy records in cows. "Records," he says, "are a means to an end, furnishing data on which to build a profitable dairy business. Culling unprofitable cows and feeding according to milk production are practices that mean more profitable milk production."

Peter J. Ten Eyck, of Albany, actively identified with the State Agriculture Department, dairymen and fair associations, and the Farm Bureau, his own county agricultural society and many other farm organizations, was invited to give the address at a banquet in Lockport, ushering in the first annual apple blossom festival Monday evening, May 18.

Frank A. Plinston of Springville, Erie county, New York, has bred western New York's egg champion—a white leghorn hen that has a state record of 311 eggs laid during a twelve month period. This layer was the second highest of 18 hens out of 11,939 which produced more than 300 eggs during the twelve month period November 1, 1929 to October 31, 1930. The highest hen, producing 335 eggs, is owned in Cortland.

There were some amazing catches of perch last week May 10 to 17, in Lake Erie at Irving and Silver Creek, and they were larger in the average than for several years. "When apple trees are in bloom," says a veteran fisherman, "is the time to get out your flies to go after the trout."

Women are getting in the game of drilling for gas. A Bradford contractor is in charge of drilling a test gas well near Olean east city limit for a group of five women who are promoting the enterprise.

The district spelling champion is an eleven year old boy, an 8th grader, and youngest of the sixteen contestants in the

Malone Boy Wins Prize

HOWARD Lawrence of Franklin Academy, Malone, was the winner for the month of May of the A. A. news writing contest for high school vocational students of agriculture. This contest will not close with the school year. Most vocational departments of agriculture have numerous activities, such as field days and judging contests, during the summer. In fact, you will remember that the contest is not confined to school events. Local news of any sort can be sent in for the prize.

Remember that the prize is \$3.00 each month for the best news story sent in and that space rates are paid for all others printed.

western New York spelling finals. He is Maxson Hopkins, of Batavia. He has chosen his mother to accompany him to Washington where he will compete in the national finals. Six hundred and eighty schools were enrolled in the western New York district contest.

Due to the continued rainy weather there is much oat sowing still to be done at this date, May 15. Cattle are not yet turned out to pasture.

Bits o' News

It is reported that another gas well has been brought in in the Dundee-Wayne territory, which makes the thirty-third in that district. The new well is four miles south of Wayne.

More New York State cows are on test and more New York State poultry flocks are signed to be culled this year than any previous year to date. Evidently state farmers are waking up to the fact that the best way to make money is to save money by culling the non-producers.

The Honeoye Falls Home Bureau Unit has chosen the following officers for the coming year: Chairman, Miss Delia Kenyon; vice-chairman, Mrs. Marjorie Woolston; second vice-chairman, Mrs. George Gordon; secretary and treasurer, Mrs. Burton Corby.

New York County Notes

CHAUTAUQUA COUNTY—Feed in the pastures is unusually good, for the season and farmers have turned out their stock, at least two thirds of the farmers are short of hay. Meadows and pastures came through the winter without the usual heaving and have got off to a good start. Quite a large amount of grain was sown last week and a few pieces that were got in earlier are up nicely. I think more plowing is being done this spring than for several years. Probably this is a result of the past two dry summers. On account of the scarcity of hay, many dairies are not producing as well as usual, and are in poor condition. School meeting passed off with the usual scraps characteristic of school meetings, but general good feeling. A copy of the American Agriculturist was on hand to steer the meeting along safe channels.—A. J. N.

DUTCHESS COUNTY—It has rained for two weeks. Farmers have corn ground ready to plant but it is too muddy and wet. Peaches and apples were not hurt seriously by the late frost. The Grange had a food sale the 16th of May at the Grange Hall.—P. S.

TIOGA COUNTY—The Holstein-Friesian Breeders Club held their annual meeting on May 9 and all the officers were re-elected for the coming year. Fred A. Blewer, president; Willis A. Goodfellow, vice-president; and Myron G. Albrow, secretary and treasurer. The club voted to show a herd at the state fair in Syracuse again this year. The cattle must be tuberculin tested within sixty days of the fair, unless they are taken from an accredited herd. President Blewer appointed

Harry W. Petzold of Owego, Willis A. Goodfellow, and Paul Smith of Newark Valley as a committee to make the arrangements for the collection and exhibition of the herd.

Report of two Tioga County Dairy Improvement Associations noted that the Tioga County Farm Herd scored the second highest for butterfat and the third for milk production, and were milked but twice daily, one cow producing over eighty pounds of butterfat.—Mrs. C. B.

SULLIVAN COUNTY—Because of rain, many are very late sowing oats, and planting potatoes and gardens. On May 10 there was enough hail to cover the ground white.

Eggs are 18c a dozen, butter 25c a pound, middlings \$1.44, wheat \$1.59.

The Board of Water Supply of New York are about Sullivan County and the talk is that work will soon be started on a dam which will help supply New York with water. This project will give over ten years employment to about 12,000 men.—Mrs. P. E. R.

GENESEE COUNTY—The chain stores seem to be at war on milk prices at Rochester. Thanks to the Dairymen's League the cut on milk price will have little effect on its members, but there are a few farmers who ship milk to Rochester independently who will find it a serious problem. With milk already so low in price another drop would mean a great deal of hard work for not much more than the pleasure of it.

Wheat is only 70c a bushel. Eggs have dropped to 13c a dozen in some stores.

—Mrs. R. E. G.

League Milk Prices For June

THE monthly directors' meeting of the Dairymen's League Cooperative Association was held in New York City on Thursday, May 21. The directors voted to maintain the class 1 price at the point where it has been for the last few months, namely, \$2.90 a hundred for 3.5 milk. The only change in price is in the class 3, in which there was a reduction of 10c, making the class 3 price, \$1.30.

credited herd plan. This plan will be continued until all organized counties have been included.

This announcement comes at a particularly opportune time since the re-testing problem has long been clouded in the farmer's mind. A definite program for initial testing as well as retesting of clean herds should materially increase the benefit of the TB test in New York State.

Hail in Southern Tier

MUCH damage was done in Steuben and surrounding counties Tuesday, May 19, by a hail storm that swept a half mile swath through a considerable portion of the Southern Tier.

At Avoca, fruit trees were stripped of their blossoms and hail stones inches in diameter were reported.

Apples received the heaviest damage in Williamson, Wayne County. Other towns in the surrounding territory, while reporting a heavy storm, stated that little damage was done to growing crops.

State Tree Nursery Enlarged

IN connection with the State Conservation Department's program, the state nursery capacity is being enlarged. A total demand of forty million trees is con-

The A. A. Yellowstone Trip

August 1 to 10, 1931

ALREADY more than 700 A. A. readers have written us asking for information about the A. A. Yellowstone trip. A considerable number have definitely decided that they are going and have sent in their checks and reservations. If you would like full information without the slightest obligation to you, just fill out the blank printed below and send it to the Tour Manager, American Agriculturist, 461 Fourth Avenue, New York City. Here is a little information about the trip.

What is it? A personally conducted tour of American Agriculturist readers to Yellowstone Park. The original cost includes all expenses even down to tips so that you will be relieved of every responsibility at a lower cost than you could take the trip for alone.

When will the trip be taken? Our special train leaves New York City August 1, on the New York Central. It will stop at other points in New York State. Of course, the farther you are from New York City the lower the cost will be. The cost does include your railroad fare to the nearest stop on the New York Central.

How will we go? We will have a special train of pullman sleeping cars, a dining car, and an observation car. Numerous side trips will be taken by automobile and bus.

Who is going? You, your family and friends, together with one of the editors of American Agriculturist and a personal representative of the railroad. For further information fill out the coupon.

Tour Manager, American Agriculturist,
461 Fourth Ave., New York, N. Y.

I am interested in the A. A. Yellowstone trip and without any obligation on my part, would appreciate receiving full information about the A. A. Yellowstone trip, including the cost.

The Hens Summer Bill of Fare

By L. E. WEAVER,
A. A. Poultry Editor

IS it really necessary to feed laying hens an expensive mash in the summer? We will grant for the sake of argument that the hens need meat scrap, milk, cod liver oil, and green

feeds in the winter when they are confined and can get only the feed that is given them by their owner. But in spring and summer is it not quite a different matter? Out on range the birds can pick their own green feed and the sunshine takes the place of the cod liver oil. And as for the meat scrap and milk can we not just leave them out of the mash and so cut down the cost of feed, and let the hens pick up their own protein in the form of bugs and worms? That sounds like a logical thing to do, and every season there are flocks on which it is practiced. We are told that the hens keep right on laying without the costly protein feed as well as they did with it.

There is another angle to the situation, however, that does not agree in all respects with this conclusion. It is that when the season of poultry culling comes on we usually find more early molters and apparent culls in those flocks that have had no meat scraps than in those that have had it. I purposely said "apparent" culls for I am certain that many of the hens that are thrown out as culls because they are not laying and have not been laying for a long time are the victims of poor rations or perhaps not enough rations.

Facts Better Than Guesswork

In an effort to find the answer to this problem of just how much if any a hen's summer bill of fare can be cut down and still give good results in the egg basket, an interesting test was run at the Ohio Experiment Station at Wooster a few years ago. A flock of Leghorns just about a year old, and of course in the midst of their first year of laying, was divided into four groups early in April. They were then continued up to the 25th of the month on the same feed that they had been getting. During these four weeks their weekly production of eggs was as is shown in the following table:

Date	Pen No. 1	Pen No. 2	Pen No. 3	Pen No. 4
April 5.....	45	77	105	63
April 12.....	84	88	89	75
April 19.....	86	102	107	93
April 26.....	91	78	89	102

Total 306 345 390 334
Apparently pen number 1 had a few

more of the poorer hens than the other pens had. And pen number 3 had more of the better birds. That is what the totals would seem to indicate.

On April 25th the dry mash was taken away from the birds in pens number 2 and 4. From then on their ration was simply a mixture of scratch grain consisting of three parts of corn to one each of oats and wheat. The birds in pen 3 continued to get the mash but without the meat scrap in it. In pen number 1 the regular complete ration was continued for the sake of comparison. And now watch what happened for the next three weeks:

Date	Pen No. 1 Complete ration	Pen No. 2 Grain but no mash	Pen No. 3 Grain & mash but no meat scrap	Pen No. 4 Grain but no mash
May 3.....	92	99	107	85
May 10.....	91	107	104	91
May 17.....	107	84	82	93
Total	290	290	293	269

All of the pens are keeping along neck and neck. It surely looks as though the meat scrap is not needed, nor even the mash. So far the test has worked out just as we have been told it would. If the test had ended at this point the conclusion would have been that hens can lay as well in the summertime on a meatless mash as on a more costly high-protein mash. But the test did not end there and the next week told a very different story. The story is told in the third chart:

Date	Pen No. 1 Complete ration	Pen No. 2 Grain but no mash	Pen No. 3 No meat scrap	Pen No. 4 Grain but no mash
May 24.....	111	33	36	28
May 31.....	107	33	16	20
June 7.....	79	44	31	71
June 14.....	85	60	50	84
June 21.....	97	52	31	89
June 28.....	104	23	26	77
Total for				
May and June	873	535	483	638

Egg production went down with a bang in all but the meat scrap pen, and it stayed low while the hens with the complete ration kept on laying with scarcely any slacking. It would seem from this that the hens had sufficient protein stored in their bodies as reserve supplies so that when the income of protein was reduced to a minimum they could still keep on going at the same rate for about three weeks. But eventually the reserves were used up and then the birds had to slow down to a pace that corresponded to the amount of protein they were getting in their ration. If that is true, then we can conclude that when there is an unexpected or unusual drop in egg production we can look for the explanation at any

When Writing Advertisers, Be Sure to Mention American Agriculturist

(Continued from Page 10)

time as far back as three weeks. As a rule it will not be so long however.

Now to return to the chart. After two weeks of low production the birds in pen 4 were given back their mash, including the meat scrap. The place is marked on the chart with a short line. It is very noticeable that improvement was immediate and decided. But the pen did not come back to where they would have been if they had not been disturbed. This we know from the results in pen number 1. Probably most of the birds that came back did as well as they had been doing before, but some of them had been thrown out of production entirely and had gone into a molt. It would be a long time before they were back on the job.

So the pen that started out with the poorest prospects finished a long way in the lead, while the pen that had the brightest prospects finished in last place. We can conclude from this test that laying hens do need protein in summer just as they do in winter. That it can best be supplied in the form of meat scrap or milk, and not by the insect life which the birds may chance to pick up.

While this test did not bring out this point it may be well to mention here that green feed which the birds can usually get for themselves on the range in the spring, soon becomes woody and sometimes dry and parched, so that for best results greens should be supplied to the hens in mid-summer and fall.

Before concluding I want to mention that I am indebted to Professor J. G. Halpin for the charts given in this discussion. They are ones that he uses in his poultry classes at the University of Wisconsin.

Vacation-Time Is Coming

(Continued from Page 3)

In this way there is always interest and a bit of novelty about being allowed to play with the contents of this box, usually paper cut-outs, crayons, and similar table busy work.

It never pays to think that because one lives in the country all recreational needs are met. True, there is plenty of lovely fresh air and plenty of exercise if one troubles to get it. But my friend, the farm girl, who came to college where a great many city girls attended, found that she was far behind the city girls in her ability to jump, run, hurdle and do other gym stunts. She had always assumed that because she was country bred, she need not worry about her muscular development; this opinion of hers she very rapidly altered after meeting in actual competition girls who all their lives had competed in the gymnasium.

Even in the busiest of busy summer months, Dad and Mother need to take a day or an afternoon off for a complete change of thought and bodily activity. The Grange, Farm Bureau, and Church picnic, the family reunion, the potato or Better Homes tour, a trip to the beach—anything to get away from the regular routine, will serve the purpose of rest and relaxation which is necessary if one is to attack the next day's job with interest. One of my college professors used to say that the man who works the hardest needs to play the hardest if he is to balance the things up evenly.

Therefore, before summer vacations really get under way and the need for all this equipment is here, it might be a good idea to make a collection of games and games equipment which will serve the purpose of re-creating body and mind for the different members of the family. Where the community is large enough to have a school or community playground, for summer use, this is a wonderful help.

Hall's Chicks

Wedding Breakfasts in Maidless Homes

Careful Planning Makes Possible a Delightful Meal Without Undue Delay

SINCE mother and sisters must always attend the wedding, the general custom of serving a wedding breakfast for the bridal party and near relatives and friends becomes a real problem in the house where a maid is not kept or available for the wedding day.

It is usually possible to set the table the night before, leaving the flowers

chocolate sauce cooked and needing only to be heated.

If there is a sister in the family old enough to attend to the serving, the mother goes directly to the kitchen, slips the potatoes into the oven to brown, puts patty cases in oven, chocolate sauce on back of range and if coffee is to be served early in the meal puts it over fire, or heats water for it according to preferred method of making it.

The chicken, with all bones removed, is simmering in double boiler on back of stove, in liquor in which it was cooked to which a very little flour and a tablespoonful of butter has been added. Beat the yolks of two eggs, add one cupful of hot cream and stir into the chicken, removing from fire at once. Slip rolls into oven to heat. Do not remove from bag.

The fruit cups are first placed on table and if there is a sister of the bride who can serve, the guests are then called. While this first course is being eaten the patty cases are filled with the hot chicken and a tablespoonful of the browned potato is put on the same plate in which the chicken patties are taken to the table. The buttered asparagus is simply heated asparagus spears, dressed with hot butter and seasoned with salt and pepper. If fresh asparagus is used it should be cooked the day before and put in double boiler to deep warm during the wedding service. The hot rolls are also ready to serve directly from the oven on a hot platter.

The one serving puts the salad together as soon as the second course is served and it is taken to the table immediately. On an individual dish put a lettuce leaf, and a slice of pineapple, on this pile the Malaga grapes cut in

halves and broken English walnut meats. Sprinkle thickly with candied cherries finely shredded or chopped and dress with a mayonnaise or French dressing.

Pour the reheated chocolate over cream after it is in individual dishes and serve at the same time you serve cakes and coffee. Punch may be served at this time or earlier in the meal.

—L. M. T.

To Keep Cut Flowers Fresh

FLOWER time is here and if one wishes to enjoy cut flowers it is necessary to know how to keep them.

If flowers are to be used in a warm room, they should be removed in the night and floated in a large basin of water, and the stems cut slightly be-

tional advantage of preventing moth eggs from hatching and it is harmless to the clothing.

Clothes for Vacation Time

(Continued from Page 5)

and with full skirt will make her as appealing as her older sister. Plain or printed voile, organdie, lawn, batiste, china silk, or crepe de chene, besides all the novelty goods offered in the sweet childish designs present an array from which very attractive little girls' dresses can be constructed.

These patterns have all been selected with the idea that by choosing material of beautiful color and of a weight suitable for the use to which they will be put, and to the wearer herself, any home dress maker can construct a summer wardrobe which would be entirely suitable for herself and her family, no matter whether she spends it at home with an occasional afternoon or evening outing or whether she packs up the whole lot and goes for a visit somewhere.

It may be added further that a woman with large figure will need to consider the effect of a fabric of her choice. She needs materials of more weight because a very sheer fabric only emphasizes her size. An extremely delicate material either in color or pattern is for the delicate, dainty woman or girl. Where the figure is large, design lines should be watched so that size is not made to appear larger. Lines straight across the body make it look larger, so in selecting materials or patterns, the very beginning of the wardrobe has to be considered.

Briefs of Patterns Shown

Morning dress pattern No. 3024 comes in sizes 36, 38, 40, 42, 44 and 46 inch bust measure. Size 36 requires 2¾ yards of 39-inch material with 7¾ yards of binding.

Jacket suit pattern No. 384 requires 4½ yards of 39-inch material for jacket and skirt with 1½ yards of 35-inch material for blouse for size 16, and may be had in sizes 14, 16, 18, 20 years, 36 and 38-inches bust measure.

Lounging robe pattern No. 972 is cut in sizes 12, 14, 16, 18, 20 years, 36, 38, and 40-inches bust measure. Size 16 requires 2¾ yards of 39-inch material with 1½ yards of 39-inch contrasting.

Sports dress pattern No. 3051 may be had in sizes 16, 18 years, 36, 38, and 40-inches bust measure. 3¾ yards of 39-inch material are needed for size 36.

Afternoon dress pattern No. 3006 cuts in sizes 16, 18 years, 36, 38, 40, and 42-inches bust measure and requires 3½ yards of 39-inch material with ¾ yard of 35-inch contrasting material and 5 yards of ribbon for binding for size 36.

Afternoon dress pattern No. 2859, especially good for full figures, may be had in sizes 36, 38, 40, 42, 44, and 46 inches bust measure. Size 36 needs 3¾ yards of 39-inch material with ¾ yard of 39-inch contrasting.

Evening dress pattern No. 3144 is available in sizes 14, 16, 18, 20 years, 36, 38-inches bust measure. Size 16 requires 6¾ yards of 39-inch material.

Slip pattern No. 228 may be had in sizes 14, 16, 18, 20 years, 36, 38-inches bust measure. Size 16 requires 2½ yards of 39-inch material with 3½ yards of edging.

Play suit pattern No. 694 is available in sizes 2, 4 and 6 years. Size 4 needs 1 yard of 32-inch material for the suit with 1½ yards of 35-inch material for the jacket.

Play apron pattern No. 3358 is cut in sizes 2, 4, and 6 years. Allow 1½ yards of 35-inch material with 2 yards of braid for the 4 year old size.

Child's dress pattern No. 238 comes in sizes 4, 6, 8 and 10 years. For size 8 allow 2½ yards of 39-inch material.

Each pattern is 15 cents in price. Order from Pattern Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

DRESS AND BONNET SET NO. B5512 comes ready-made in sheer maize organdie, stamped for simple embroidery. Two-tone maize organdie picot strips for ruffles are included. Per set—\$1.50. Order from Embroidery Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

to be put on at the time the candles are lighted. With a simple menu like the following, breakfast can be on the table within twenty minutes after the return from the church, or at least as soon as the bride is ready if she first changes from her wedding gown to the one for travelling, as many do when time is limited and she is to leave immediately after the breakfast.

Breakfast Menu

Fruit Cup
Orlando Potatoes Patty Chicken
Buttered Asparagus
Hot Rolls
Celery Olives Radishes
Pineapple Salad
Coffee Rose Leaf Punch
Cakes
Ice Cream with Chocolate Sauce

Early in the morning pare, cook and mash the potatoes, adding one tablespoonful of cream and one teaspoonful of butter to each cupful of potato. Arrange on deep glass pie plate, and score the top with a fork or large grater. Set in ice box. Put the rolls in paper bag and sprinkle outside of bag with water. Have patty cases baked the day before, put chicken cooked and ready for final dressing in double boiler on back of range. Have celery, olives and radishes in dishes ready for table and pineapple in bowl, with grapes, seeded, in separate dish. Fruit-cup and cream should be ready in the ice-box and

Organdie Pillows

These cleverly designed organdie pillows are pleasing and attractive and lend special beauty to a cozy nook or the boudoir.

NO. C84 is stamped on maize-colored organdie and embroidery is accomplished with six strand cotton with lazy-daisy stitches, French knots, satin stitches, basting and outline work. Including a three inch strip for boxing and sufficient material for the back, price of this pillow is 50c.

Portions of designs NO. C2721 and NO. C2724 are tinted with washfast oil colors. NO. C2721 is of maize-colored organdie. Eyes are tinted with blue; lips in red; hair is auburn and red for roses and green for earring and leaves. Outline face in black, brown basting stitches for hair and red, yellow and pink for roses. NO. C2724 is of green colored organdie with red, yellow and black tinting. Outline stitch in black for face, shoulder, hands and hair; orange French knots in center of comb; hat band, cuffs and collar are in red. Including sufficient material for boxing and back, price for each of these numbers is 50c.

NO. C2725, parrot design, is stamped on maize-colored organdie. Embroidery is made with wool yarn in outline stitch. Red, blue, green and yellow for feathers; grey for bill and feet; brown for stem and three shades of green for leaves. Price of this pillow is 35c, including sufficient material for back and for boxing.

Embroidery floss can be furnished for 50c extra for any design. Order from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

fore returning to their vases the next morning.

Some flowers do not last well when cut, and therefore should be enjoyed in the garden rather than in the house. Violets, hollyhock, and poppy are far better outdoors than as cut flowers. Any flower which has a milky sap should have the stem burned or plunged into boiling water immediately after cutting. Euphorbia is such a plant.

It is a good plan to take a pan or jar of cold water into the garden and plunge all flowers into the depth of their stems and allow to remain for some hours before arranging in their vases. A shallow bowl is an artistic thing, but it is very hard to keep flowers fresh in one.

Protect from Moths

IN storing winter clothing it is recommended that a moth preventive be used. This preventive has a very long name, paradichlorobenzene, but it is very effective. It does not have an offensive odor, and when confined in close quarters, such as a chest or trunk, does prevent the moths from destroying the fabrics. The crystals may be purchased from the drug store and sprinkled among the clothing.

Paradichlorobenzene has the addi-

The Story Thus Far

Jim Stuart rescues Aurore LeBlond from a drifting canoe in the lake. LeBlond, Aurore's father, searches for her and gets to Stuart's trading post. LeBlond's lieutenant, Paradis, tries to persuade LeBlond that Stuart, in spite of the storm, should have notified them of her rescue. Before they leave, Aurore and Jim arrange a meeting place on an island.

Jim's trading post has lost much of its business to the rival concern, whose local representative is LeBlond. Old Esau, a native in Jim's employ, has a plan to get the business back. Jim goes to the island to get a promised letter from Aurore.

Paradis, who has stolen Aurore's note, gets the drop on Jim and starts to take him to LeBlond, but Paradis is outwitted and given a ducking and a warning.

Jim and Omar start for Lake Expanse to see Christie who has charge of the Hudson Bay Post. Christie's daughter, Mary, appears to be more than casually interested in Jim Stuart.

* * *

"ARE you interested to hear the rest of the story?" he demanded, watching her curiously, for he had noticed that veiled look in the eyes of Mary Christie before.

"What is she like, Jim? What happened? Did you take her to Sunset House?"

"She's dark, of course—like her father. A good-looker—striking in fact," he stumbled on.

"Even with her hair bobbed—and knickers?"

"Yes, even with her short hair and the knickers. In fact the knickers were becoming," he laughed.

Mary's regular features stiffened. "They must have been—very—when you pulled her out of the lake."

Then Jim briefly narrated the events of the evening following the coming of Aurore LeBlond to Sunset House. When he had finished, the girl who had listened while her eyes furtively ranged from crisp brown hair, and bold, weather-burned features, to the well-set shoulders and capable hands, said quietly: "And to think that you'll never see this—what d'they call 'em, flappers?—this flapper again, the daughter of your bitter rival. Poor Jim!"

The sound of voices checked Jim's reply as Christie and McComb entered the house.

That evening the inspector sat late with Stuart at the trade-house. The spring trade at Sunset House had been little better than that of the year before. It was a great disappointment to Andrew Christie and he made no effort to conceal his chagrin.

"They'll be after me again at Winnipeg when they see yer returns," he said, squinting at Jim through his steel-rimmed glasses. "It's three years now since we set you up at Mitawangagama and yeh're making little headway against the Frenchman."

Jim smiled into the whiskered face of his chief, stifling the irritation which the old man's reiterated reproach aroused in him. For two years, on each trip to Lake Expanse, he had been subjected to a long evening of Andrew Christie's lamentations over the failure of the new post to wrest more of the trade from the firmly established North-West Company. But this evening, before the long smoke talk in the trade-house came to an end the inspector's tone perceptibly hardened.

"Ye've been a great disappointment

to me, Stuart. Knowing yer father, and yer own record at God's Lake, I picked yeh as the man to beat Louis LeBlond at his own game."

Jim's blood heated at the unfairness of the thrust. "Yes," he said, "and how have you backed me up? You've held me to Lake Expanse prices and allowed LeBlond to outbid me for the fur."

"But the Hudson's Bay goods are better—they're worth more."

"That's true; they are; but LeBlond's got a mysterious hold on all the northern hunters who've kept away from us. Omar and I think we've stumbled into a clue. We're going to follow it up this summer."

A Year to Make Good

"Well, it's high time the post was getting its share of that trade. It's beyond me why ye've not done better. Yer father, if alive, would be sore disappointed."

Jim choked down his anger as the old man went on: "Now they'll not be thinking of a change this year, but—"

"But what?" broke in the exasperated factor of Sunset House. "If that's meant to be a threat, Mr. Christie, make it specific! I've worked hard to make a go of it but you know and I know that we've got the cleverest fur man in the bush as a competitor, and if you and headquarters think some one else would do better, say so now. Send another man and see what he'll show!"

"Tut! tut! Not so fast! I sent yeh up there and I ain't ordered yeh out—yet."

The grey eyes of the younger man glittered. The muscles of his jaw bulged as he fought for his self-control. Nothing meant anything to Andrew Christie but profits. The fight they had made at Sunset House, he and Omar and Esau, was as nothing to the inspector so long as success had not immediately followed.

"What you mean," said Jim, staring through half-shut eyes into the impassive face of Andrew Christie circled by its stubby beard, "is that you're giving me one more chance—a year, perhaps."

"Aye, that would be fair."

Jim smiled sourly. "Knowing the odds against us, you nevertheless, think we ought to be on our feet by another year?"

Christie nodded.

"Well," said Jim, rising, and expelling a deep breath, "unfair as it is, I'll take you. If I don't double the trade next year I'll quit."

The following morning as he walked on the shore of the lake with Mary Christie he told her of the year of grace given him by her father.

"He sent me up there on a forlorn hope with a pat on the back," Jim said to the girl whose troubled eyes reflected her concern for the future of the man beside her. "He brought me from God's Lake where the Indians knew me and we always showed a fine profit for the company and expected me to beat Louis LeBlond at his own game in three years. Then, I was the bonny lad to do it. Now, I'm given one year to turn the trick or quit."

"Oh, Jim," she protested, "he doesn't mean that. They're worrying him at Winnipeg and he's taking it out on everybody. He was the same way with McCoy, from Jackfish, last week."

Friendship?

"Well," Jim turned, to surprise the veiled look in her eyes—a look now

close to pain, "it's hard to work three years as we have worked and in the end get kicked for our pains."

"I appreciate what you've done up there, Jim."

Had they not been in plain sight of the Indian shacks, he would have caught the trembling girl in his arms and kissed her in sheer gratitude. There had been times in the last three years, when, in his loneliness, he had been dangerously near falling in love with the blond-haired daughter of his chief, but had never quite succumbed to the attraction of her undoubted good looks abetted by her frank friendliness.

She gazed at him now through eyes unabashed, empty of all subterfuge, as she said slowly: "Doesn't it mean anything to you to know that I believe in you?"

He saw the girl's heart in her steadfast gaze and a strong impulse to take what she so freely offered swept him, when a flash of dark eyes framed by wind-tossed hair crossed his vision. Slowly he nodded. "It does mean a lot to have your confidence—your friendship, Mary."

With a sigh she turned from him and they continued their walk.

That afternoon as the canoe left the post bound back to Sunset House and Jim waved his hat at the lone figure standing in the clearing he carried with him the memory of the tense face of Mary Christie. He saw her again, her heart in her eyes, offering her love. Her appeal had been powerful—the frank revelation by this proud girl who had held much of his thoughts until a canoe drifted across wind-harried Mitawangagama. But even if the black-lashed eyes of Aurore LeBlond had never flashed their challenge, it could not have been otherwise. Andrew Christie had, the night before, cracked the whip of his authority over Jim's head—given him a year of grace. In all honor he could not then have sought sanctuary behind the skirts of his chief's daughter. But the picture of the girl in the distant clearing signalling Godspeed to the rapidly disappearing canoe, left the Bowman sick at heart.

* * *

CHAPTER IX

TWO days later, with Smoke running the shore, Jim and Omar were poling the Peterboro up a wild reach of the swift Woman River. Through the long hours since sunrise, as they fought the drive of the current with pole and paddle, and, at times, with tracking line, Jim's thought alternated between the coming year which would decide his future with the company, and the two women, far apart as the poles in nature and temperament, who had come into his life. As for Aurore LeBlond, she would soon be but a memory. In a month she was going "out"—back to Winnipeg. There was no chance of even seeing her again, as he was to start with Omar and Esau at once for the Pipestone country. And she would have come to the split rock but for that prying Paradis, before he went south. Why hadn't he drowned the snake when he had had the chance?

The canoe was entering a stretch of "strong water" demanding the utmost efforts of the crew to force her upstream when, suddenly, a rifle exploded in the willows of the near shore and a bullet splintered the spruce pole in Omar's hands. Off balance, the Bowman lunged into the river, but twisted as he fell and caught and hung to the gunwale of the boat while Jim threw his weight against the roll of the swinging craft.

"Lie down! Let her dreef!" called the half-breed as a rifle again cracked in the willows and a splinter from the gunwale flicked Jim's desperate face with blood.

Flattening out in the canoe, he groped for his gun lying amidships as the drag of the man in the water headed the bow down river. Again a rifle

exploded and a bullet passed through the wooden wall of the craft close to Jim's head.

What could it mean? Who would ambush them here on the Woman River?

As the boat drifted out of easy range of the willows, Jim reached and cocked his gun, rose boldly to his knees and rapidly emptied the magazine at the tell-tale wisp of smoke against the green of the scrub. Then over the bow rose a dripping face warped with rage as the thick arms of Omar lifted his body from the water. With a lunge the half-breed was in the rolling canoe and his rifle firing at the fast receding shore.

Shortly a bend masked the willows from the sight of the dancing craft and the men swung the canoe in to the beach.

"Well, what's this mean?" demanded Jim.

"Paradees, for sure!" snapped the Bowman as they landed. "Come on, we hunt for dem!" And Omar plunged ahead into the brush.

Smoke Hits the Trail

They had travelled less than a hundred yards when a familiar yelp, from somewhere upstream, sounded above the fret of the river.

"Smoke! He'll find their trail!" muttered Jim. Then fear for the safety of the dog he loved led him to push rapidly on up the river shore while Omar cut back inland behind the scene of the ambush.

Again Smoke's yelp announced that the dog had found something of interest and was investigating it, but Jim's ears strained for the dreaded sound of a rifle which would mark the meeting of the dog with the quarry he hunted. He held on up the river shore until he reached the scene of ambush. There he found three empty shells and, in soft ground, moccasin tracks cutting back from the river, which he followed for a space, then lost.

Suddenly, deep in the forest, a rifle was fired and Jim's heart sank, as he heard the husky's yelp.

"He's shot Smoke!"

Furious with the thought of his gallant dog gasping out his life from a bullet wound, Jim plunged ahead in the direction of the rifle shot. Shortly he saw a dark patch through the spruce and threw his rifle to his shoulder. As he lined his sights, the dark face of Omar appeared, head tilted as if listening.

Jim reached his friend's side. "Did you fire that shot? Where's Smoke?" he demanded. "I thought he was hurt."

"I shoot at dat feller! Smoke's after him now—in dose cedar. It ees so t'ick you see noding." Omar nodded in the direction of a cedar swamp.

"You saw him?"

"Ah-hah!"

The Dog Wins

Separating, the two men started circling the dense cedar growth. Jim had not travelled a hundred yards when he heard Smoke's roar, followed by a shot, then the sounds of a struggle. Plunging through the thick undergrowth, mad with anxiety for the safety of his dog, he saw a running figure turn and swing with clubbed rifle at the black-and-white bulk of the pursuing Smoke. With a muffled roar the hurt dog again lunged at the Indian; again the clubbed rifle crashed as the husky leaped. Knocked back to his haunches, with a shake of the head the great dog closed with the Indian who was desperately trying to load as he ran. The tusks of Smoke snapped as his one hundred and forty pounds bore his quarry to the earth.

Throwing himself on the enraged dog, Jim balked the lunge which would have torn the throat of the helpless man on the ground, then dragged the battle-mad Smoke from his prey.

"Throw that knife away or I'll let

How Do You Manage for Time to Sew?

(Continued from Page 3)

bedroom or whatever you will. Notice I said "our and we." I believe the children (not the housework) are both a father's and mother's job. Daddy is sorely missed if he is kept away at six o'clock bedtime when four precious things are tucked in. I help with and enjoy weeding the garden, feeding chickens, etc., but surely lugging wood or any great quantity of water (ours has been piped to the kitchen) is a man's job.

Perhaps this hasn't helped you at all but it seems very worth while to us. If you could see us at six o'clock, the twins would be having their bottles, the other two busy dressing and breakfast would be almost ready to serve, but "for the life of me" I couldn't tell you what would be happening at ten o'clock. In fact I'm writing this with the breakfastdishes still to be washed—but—dinner's at twelve!

—ALSO BUSY.

* * *

Saving Work Saves Time

WARM the house, air beds, and do living room before breakfast. The girls are old enough for seven o'clock breakfast (a nap later will make up sleep), which will save time. Next, poultry, coal, water and wood. Soak dishes in suds while you carry the wood. They'll wash quicker, easier. Carrying coal, wood, and water is a man's job—try to get Friend Husband to see to that.

Each evening put living-room in order ready for sweeping and dusting next morning. Fix cereal and coffee, ready for stove. Set breakfast table, prepare vegetables, desserts, for noon meal, in morning. Alarm clock set allows you to work while baking or cooking—less oven-watching.

Monday, wash, try to finish at noon, sprinkle clothes in afternoon if dry; Tuesday, iron, omit unnecessary ironing, churn, bake bread; Wednesday, mend, sew; Thursday, churn, sew; Friday, general cleaning, sweeping, mopping, wash woodwork, windows; Saturday, churn, clean silver, change beds, cook for Sunday.

Having a regular time for cleaning woodwork, windows, silver makes very little to do at one time. House is in better order with less work. Saving

work saves time. Wiping mopboards with clean damp cloth after mopping saves much work. Make menus ahead. Jot odd tasks on paper, check off as done. Use simple sewing patterns. Use pillow-tubing and wide sheeting—saves time in sewing. Learn other sewing short-cuts.

This schedule is like mine. Each task must be quickly done, to work it right. The more one can do early, the easier the balance of the day's work. This leaves two days weekly for sewing, etc. Properly followed it leaves a couple of hours on each of at least two other days, also. Sunday schedule may start like weekday's, thus allowing time for church attendance.—MRS. W. R.

Under Frozen Stars

(Continued from Page 12)

him have you!" Jim commanded, holding the straining husky as the Ojibwa, rolling away from the snapping fangs, reached for the sheath on his sash. "Now lie where you are! If that shot hit him, I'll put him on you anyway." But there was no sign of blood on Smoke's trembling body.

Then Omar, drawn by the shot, reached them.

"Ah-hah! So Paradees sen' you?" The swart face of the half-breed stiffened, deepening the seams which furrowed it, as he glared down at the frightened Indian bleeding slightly at the shoulder from the snap of Smoke's fangs. "Wal, I t'ink we camp here to-night w'ile you tell w'at you know 'bout M'sieu' Paradees, ah-hah!"

With the Indian walking ahead, prodded by Omar's gun, they returned to the canoe and made camp.

Supper over, Omar began the inquisition of the sullen Ojibwa who had remained dumb to all attempts to make him talk. Lighting his pipe, the half-breed freshened the fire, then squatted beside the prisoner, whose feet were pinioned with raw-hide, and said quietly in Ojibwa: "You have woman and children?"

The mink-like eyes of the Indian shot a furtive glance at the lined visage of the man who squinted into the fire. But the swart mask of the interrogator was as inscrutable as flint.

(Continued Next Week)

HANDY ANDY Says "Here's How"

To Insulate Your Car Against Motor Heat

By Ray Inman

Cut some insulation board to fit the front side of your cowl and the underside of your foot board.

Cut out the necessary holes with a sharp knife or a compass saw and attach the boards to cowl and foot board with small stove bolts and screws.

The insulation on floorboard should fit a bit short of the edges while that on the cowl should lap the joints to help prevent water from splashing up in sloppy weather.

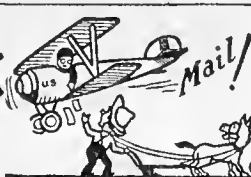

THIS IDEA WAS SUBMITTED BY A SCOTCHMAN WHO SAYS IT'S PURE EXTRAVAGANCE TO LET ALL THAT MOTOR HEAT GO TO WASTE. (WELL... MAYBE WERE WRONG)

IN MAN.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

Barnum and Lincoln

“BARNUM was right”. How often have we heard the veteran circus man credited and quoted when some bold-faced fraud has been revealed and stories told how a gullible public had “been taken”, hook, line and sinker. Old “P. T.” is credited with having said that “there’s a “sucker born every minute, and sometimes they’re twins.” Barnum was right. Abe Lincoln said something along the same line when he said that you can fool some of the people all of the time and all of the people some of the time. Perhaps Abe and P. T. had dealt in a little story telling or yarn swapping at one time or another. At any rate, they hit the nail on the head. It is as true today as it was when those celebrities made their observations.

The fact that Mr. John H. Public is so anxious to get something for nothing makes it particularly easy for the schemer to operate. We are all guilty at one time or another in our lives, from childhood up. Witness the youngster entering a candy store to buy a “prize” package, which usually contains about three cents worth of sugared pop-corn and a little ornament such as a metal ring or trinket, all for five cents. Adults are not excluded. It is not alone the dull, stupid or brainless individual who falls for an easy-money proposition. Again witness thousands of ordinarily sane-minded hard-headed business men “playing” the stock market to a point far beyond reason, to have things later go to crash under their own weight. Now that it is over, we can look back and see the extremes to which many went. And the “I-told-you-so’s” had a gala holiday.

The fertility of farm land seems to have varied attraction. It attracts the husbandman who would grow bumper crops. It, too, attracts the schemer looking for fertile fields. He does not wait to raise things, but immediately plans to reap and harvest. He jumps in quickly, harvests his crop and is gone, leaving sadder but wiser (sometimes) victims in his path. Yes sir, there is one born every minute, and you can fool

all of them some of the time, and some of them all the time.

In a recent issue of the New York Packer, a market trade weekly, there appeared the following item:

Egg Shippers Looking for Hurwitz, N. Y. Operator

Several small egg shippers have been in from the country looking for a man named Hurwitz, who sent out circulars from 291 Greenwich street and operated under the name of the Kadans, Hurwitz Company, receivers and distributors of butter and eggs. The letterhead says that the concern was established in 1886.

The householder at that address says that a man named Hurwitz came along and rented desk room in the store and said that he was going to deal in herrings. Hurwitz paid his first month’s rent and then for the next month gave a check, which came back. There was a creditor around looking for him, so he gave the creditor a check, which also was returned marked “N. G.”

Some years ago Hurwitz was in business with a man named Kadans, but that was so long ago that it has almost been forgotten. However, some of the old timers recall such a concern. There is no Kadans connected with the firm at all now and it may be an attempt to play on the name of the Louis Kadans Company, inc., farther down the street.

This game must be as old as the hills. Usually the promise of a cent or two per dozen eggs over the top market price is the bait on which Barnum’s brain-child bites. Some of these egg-buyers string along the shipper to induce him to plunge, only later to shear him doubly close. Others do not wait so long. They grab the first returns and then do the disappearing act. Others gain time and money by having a few “rubber” checks bouncing back and forth. American Agriculturist has warned its readers of this scheme times unnumbered. The writer has chased these “sharps” around New York into all kinds of alleys. He has been present in Court when the Federal Government has prosecuted the perpetrators of the fraud, sending some to prison. Columns of warnings have been published. But

the game works still and is worked, in spite of the fact that any one can get previous information about a buyer for the mere asking. But no, that takes time, and “this offer cannot wait.” Yes sir, there is one born every minute, sometimes they’re twins. You can fool some of the people all the time and all of them some of the time. Abe and P. T., you said it.—FRED W. OHM.

Milk Producers Protected By Bond

CHECKS are being sent out by the Department of Agriculture and Markets to those having claims against F. W. Golaski, of the Marion Dairy, 969 Hertel Ave., Buffalo, the total being \$1773.63.

Complaint was made to the department that the dairy was in arrears in payments to producers, and an investigation followed. Golaski was directed to appear at the department for hearing as to why his license should not

Promptness Is Fine

YOUR company’s draft for \$90.00 to cover claim of my wife following her automobile accident was received to-day.

Mrs. Bundy is slowly recovering and wishes me to thank you for her. We both think your policy is fine and such promptness in payment should be the means of bringing you and the American Agriculturist many new members. We surely will recommend you very highly.

Very respectfully,
C. C. BUNDY,
Canisteo, N. Y.

Mrs. Bundy was injured on March 23rd, 1931 when the automobile in which she was riding overturned on a snowbound road. She suffered severe bruises of her back and strain of the right hip, and leg.

be revoked, but failed to do so. Notice was published in newspapers directing producers with claims against Golaski to present them, and demand followed on the bond which he had filed to protect producers furnishing him milk.

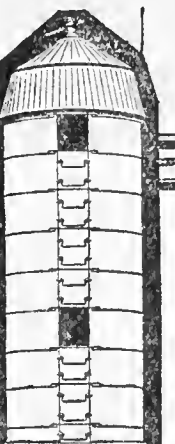

Dealers are required to file a bond in a sum fixed by the Commissioner and for not less than \$2,000 to protect the producers from whom they purchase milk. In the last license year licenses totalling 934 were issued by the department and surety bonds were filed in the aggregate sum of \$3,287,800. Payments on sureties were made in six cases and these resulted in the payment of \$10,107.70 to the department, which was distributed among producers claimants.

Unfair Test Brings Fine

A REPORT comes from Pennsylvania that the Queen City Dairy of Allentown has been prosecuted and fined for under-reading the Babcock milk test and thereby cheating farmers who deliver milk to the plant. The action resulted after the dairy experts of the Pennsylvania Department of Agriculture had completed a check on milk testing methods in that section. More than one thousand dollars was given back to farmers in the vicinity of Allentown for their March deliveries of milk.

Such isolated cases as this occasionally come to our attention, but we believe that in general, most milk companies try to give a fair test and there is less cheating done than is generally believed by the producer.

There is a wealth of valuable information about gardening in a little booklet which you can get for the asking. This booklet is entitled “Better Gardening—What, When, and How to Plant,” and is published by the Union Fork and Hoe Company of Columbus, Ohio. You can write either to them direct, or to us and we will send you a copy.

• Practical in construction—use and economies effected! •

Unadilla unquestionably represents the highest practical and economical development in wood stave silos. Cures and keeps silage perfectly. Provides greatest safety and convenience in use—the door fasteners form a permanent safety ladder. Hoops adjusted from this ladder. All good, practical reasons why more Unadillas are sold than any two other makes.

Come with the American Agriculturist Party to *Yellowstone Park*

August 1st to 11th, 1931

SEE the wonders of Yellowstone with a congenial party of American Agriculturist folks . . . neighbors and friends who will add the pleasures of social contacts to the thrills of travel and sightseeing.

We will travel on a Special train of modern Pullman sleepers, dining cars and a beautiful observation-club car with barber shop, bathing facilities and comfortable lounging rooms. The trip will be an "all-expense" tour in every sense. The one low-cost ticket you buy in advance includes everything: railroad fare and sleeping car; all meals on dining cars and in the Park Lodges; motor car transportation in the Park and at the several sightseeing stops en route; even personal tips! And this cost will be considerably less than you would spend if making the trip alone.

High Spots of the Trip

We'll start with sightseeing in Chicago and then whirl away to St. Paul following the scenic Mississippi River. We'll stop for a visit to the Sioux Indians in Dakota . . . and on to Bozeman where we take to motor cars for a trip through the fertile Gallatin Valley. The world's largest cattle ranch has invited us to visit them. Lunch will be served at a Guest Ranch in the heart of the American Rockies. And then . . . YELLOWSTONE!

Three days will be spent in the Park, amid inspiring mountains and natural phenomena which draws tourists from around the world. Grand Canyon! Old Faithful! Mammoth Hot Springs! You have heard of them. Now see them! Feel the thrill of adventure and accumulate memories that will last a lifetime.

**Tour Leaves
Aug. 1st. Get

"He Who Manages Affairs"

A Fireside Reflection About Sir William Johnson

By JARED VAN WAGENEN, JR.

ONE summer day almost two hundred years ago—to be exact it was in 1738—an English ship arrived at New York and from her a tall, athletic red-headed young Irishman stepped briskly and confidently forth into the new world. I

Jared Van Wagenen, Jr.

say briskly and confidently because surely it was after this fashion that he walked through all his adventurous after years. The new arrival was no raw bog-trotting peasant seeking his fortune in a strange country. His name was William Johnson, his age was 23, and his family, while not of the nobility, might fairly well be described as Irish gentry.

His mother was sister to Sir Peter Warren, sailor, officer, and sometime Admiral in the Navy of His Majesty, King George. Now this illustrious uncle, through his wife, owned a tract of fourteen thousand acres of land at Warrensburgh on the south side of the Mohawk—some 12 miles west of Schenectady, and young William had come to America to take charge of this estate for his uncle, and incidentally to engage in the pleasant and profitable business of trading with the Indians by way of exchanging cheap cloth or glass beads, or sometimes muskets and rum, for beaver skins and other peltry.

Such was the auspicious coming of the youth who rapidly grew to be the most important figure in Colonial New York and who during the third of a century thereafter wrote his name ineffaceably

into the history of his Mohawk Valley.

By his uncle he was charged with the duty of clearing his land and cutting it up into farms to be, as opportunity offered, either rented out to tenants or sold to bona fide settlers. He was also commissioned to set up a store and trading post fitted to supply the wants of the Red Men as well as the Colonists, Dutch, and German, who were already making homes along the lower reaches of the Mohawk.

At this date it was evident that the White Man's Civilization was striking westward beyond the confines of the Hudson Valley. Already Albany had been peopled by Dutchmen for more than a hundred years. Schenectady was coming to be an important village, while further up the river at the mouth of the Schoharie Creek was Fort Hunter with a church and steeple which represented the bounty of good Queen Ann in behalf of her fellow countrymen, the German Palatines. From Fort Hunter you might follow up the Schoharie to Middleburg where white men had been living since 1712, or one might turn aside from the

Schoharie at Central Bridge, going up the Cobleskill Creek to its headwaters, and so on down the Susquehanna following a path which had been beaten deep by the moccasined feet of Red Men through immemorial generations.

But in spite of these evidences of a new regime, power still rested with the Mohawks and with the more distant tribes of the Iroquois Confederacy. Such was the country in which young William Johnson was to make a great name for himself.

In one respect the story of the settlement of New York had been remarkably different from that of New England. There, almost from the first, the Red Men had savagely and passionately resisted the encroachment of the Whites. But in New York the two races as a rule had maintained friendly relations for fully an hundred and fifty years. Possibly this may have been due to the fact that the Dutch and later the English, dealt more wisely and justly than did the men of the Massachusetts Bay Colony. More I think it was because the Iroquois were wiser statesmen and strong enough to make themselves respected. Some one has said that they were "too sagacious to be deceived and too powerful to be eradicated." Such Indian troubles as had occurred arose because the English and the French tried to use the Red Men against each other. Not until the Revolution when the State had been settled for one hundred and sixty years did the people of New York have brought home to them a full measure of the horrors of Indian warfare.

One great outstanding characteristic of
(Continued on Page 2)

At the top, the home of Sir William Johnson, now the property of New York State. Lower left—the chamber in which St. Patrick's Lodge No. 4 F. & A. M. was installed in 1766. At lower right—the main hall. The banister shows to m a h a w k notches put there by an Indian chief.

This story about Sir William Johnson was broadcast by Mr. Van Wagenen from Station WGY last winter.

All fun and no worries for AMERICAN AGRICULTURIST TOURISTS

ELEVEN days in the greatest vacation land of the world. Every day new sights, new thrills . . . and the good fun that comes through traveling with friends and neighbors.

You'll have nothing to worry about on this American Agriculturist Tour. Everything is planned for you. All meals, all side-trips, even tips to waiters and porters are included in the low-cost ticket. Nothing to do but have a good time.

Our Special Train insures every comfort and luxury. Modern Pullman sleepers, observation-club car, fine dining cars!

Let us send you our interesting folder describing everything we will do and see on this great trip. Yellowstone Park is our main objective . . . marvelous Yellowstone, where we spend three full days amid glorious mountain scenery and Nature's most amazing phenomena. We have planned interesting sightseeing stops coming and going. A visit to the world's largest cattle ranch in the fertile Gallatin Valley, nestled in the heart of the Rocky Mountains. The picturesque Sioux Indians in North Dakota. Entertainment in Chicago, the Twin Cities, Dakota, Montana and the Rockies. Send for the folder today and let us tell you how little it will cost to join our August travel party.

What meals we will have in our private dining cars!

On leaving Livingston, the train turns southward directly into the mountains. Standing guard over the entire Yellowstone Valley, Emigrant Peak towers in snowy majesty. At the base, Emigrant Gulch, one of the oldest gold mining sections of Montana.

MAIL COUPON NOW!

"He Who Manages Affairs"

(Continued from Page 1)

William Johnson—the thing that has made his name into a legend—was his very remarkable friendship and vast influence with the Iroquois. Some whimsical wag has declared that "the only Englishman who could even get on well with the Indians was Sir William Johnson—and he was an Irishman." But at any rate, from the day of his coming he began patiently and systematically to cultivate their friendship and support. In this he succeeded to a very wonderful degree. Apparently they gave him not only respect and obedience—they gave him honor and even affection.

Adventurous, vigorous of body, delighting in new experiences, he seems to have found genuine pleasure in his adoption of the Indian customs and dress. At times he painted his face and in head dress of feathers, he took part in their dances, prancing and leaping to the sound of the drums and tom-toms. Within a few years he was speaking their language and dialects as if to the manor born.

In 1746 when he had been eight years in America, the Iroquois came to Albany for one of their councils with the Whites. One—the Honorable Cadwallader Colden, Esq., member of His Majesty's Council and Surveyor General of New York, was present—and in a book published two years later he gives this account of that occasion. "When the Indians came near the town of Albany on the eighth of August, Mr. Johnson put himself at the head of the Mohawks, dressed and painted after the manner of an Indian War Captain and the Indians who followed him were likewise dressed and painted as when they set out for war." In such fashion did young William Johnson conduct himself. He was no snob to be ashamed of his forest brothers when in the presence of his own people.

Young William Johnson was an ambitious youth in more ways than one. Almost from the first he started out to make himself the great man of the Mohawk Valley and he succeeded so thoroughly that he had not only no equal but no rival.

"He Who Manages"

Within a year after his coming he was purchasing land for himself on the north side of the river. Once, at least, he made a journey far down the Susquehanna Valley with a stock of goods for trading with the Indians, and in many ways he was laying broad and deep the foundations of his future power. Very soon the Mohawks had adopted him as a member of their tribe, giving him the new name "Brother Warraghiyagey," meaning "He who manages affairs."

Caring for Uncle Peter's estate and managing the trading-post by no means gave outlet for his restless energy. He began to acquire much land for himself, gathering it in many ways at a period when there was still much land to be gathered, until ultimately he built up a great barony which in extent had few equals in America. Certainly he prospered and spread himself like a green bay tree. Only twelve years after his coming to the Mohawk country, he had built him a big stone house at a point where a little stream entered the valley about three miles west of what is now Amsterdam. It was a substantial rectangular structure and after one hundred and eighty years it still stands, a dignified and impressive memento of the great Lord of the Mohawk Valley. Here he lived during the rich years of his prime, here he dated his letters "Fort Johnson" and here were born his eight children by Molly Brant, the Indian girl whom the Master had taken to his bed and board without benefit of clergy. Unblessed as the union may have been by any priest, she always presided at his table and as his many distinguished guests came and went, he exacted from them all the honors due the Lady Johnson.

A dozen years later, as befitted his growing power and wealth, he built him yet another and more pretentious home which he called "Johnson Hall" and hither he brought Molly and her brood. Here he maintained the tra-

ditions of that universal hospitality incumbent upon a Baronet and great Lord of the Manor and in his big new house he died and through its wide portals they carried him to his last resting place beneath the chancel of the church that he had piously caused to be erected.

What Might Have Been

It is always one of the fascinating yet fruitless inquiries of history to ask what might have happened if only certain things had been different. All his life, Sir William had been a staunch defender of the Mother Land and of the King who had honored him. Yet there are those who believe that if he had lived, he would in the end have been found fighting in behalf of the Colonies. Had this occurred, he surely would have held the Indians with him against the crown. Lacking this aid, England would have made the struggle a much shorter one. But whatever might have been, when the Revolution came, his son Sir John and his sons-in-law and all connected with his family cast their lot with England and went down to defeat with her.

Happily for Sir William, he was never called upon to decide which master he would serve. He died in 1774, just on the eve of that great conflict. It is well that he passed before he saw his beloved valley harried by fire and sword, neighbor divided against neighbor and finally his family and all whom he held dear exiled to Canada while his vast possessions built up so laboriously were confiscated by the State of New York.

* * *

In the beginnings of that year, Sir William made his last Will and Testament. Perhaps it is as remarkable a document as ever was signed and sealed. He had brought together one of the greatest estates of his generation and now he must try to answer the momentous question "Whose shall these things be?" So far as lay within his power, he tried to answer it fairly and justly. There were thirteen closely written pages of his will and at the foot of each he set his bold signature "W. Johnson." He bequeathed his title and his great house and a generous portion of his far flung domain to Sir John, his first born, son of "my beloved wife Catharine"—the German girl who bore for him his first three children. His vast acreage had been surveyed and plotted. Now he must divide it along with his houses and blooded cattle among many heirs and kindred and dependents. Perhaps few men have been so thoughtful and conscientious at the last. He set aside certain parcels of land to be sold for the benefit of his six brothers and sisters across the sea. To "my faithful and prudent housekeeper, Mary Brant" he gave a part of the Royal Patent and also a slave for her especial use as well as a provision of money. Nor did he forget any one of her eight children. One wonders if after all, Molly Brant was not his real love—the one grand romance of his irregular life.

Indian Friends Not Forgotten

Then finally—and I can thrill to this provision—"It is also my desire that the sachems of both Mohawk villages be invited to my funeral and there to receive each a black stroud blanket, cape and gloves which they are to wear and follow as mourners next after my own family and friends." Deep in his unruly heart, Sir William loved his Indian associates.

It was January when he signed the will to which he had given such anxious thought; in July he was dead. He died suddenly in the very midst of a great Indian council held at Johnson Hall whither had come hundreds of Red Men for a ceremonial conference with the man whom they delighted to honor.

The Council had proceeded on Saturday, had been adjourned over Sunday, and did not resume on Monday because in his great bed chamber in the Hall, the Lord of the Manor lay sick unto death. In his last hours a great

Niagara's First Apple Blossom Festival

Queen Myra and Her Court Head Tour in Western New York

A ROYAL dynasty was founded in the famed Niagara fruit belt this spring when for the first time in history a queen reigned over the galaxy of blossoming apple orchards in Niagara and Orleans counties.

Niagara's first Apple Blossom festival, held in the fruit belt May 16-23, surpassed even the best hopes of its most optimistic sponsors, and already plans are being formulated for a bigger and better Second annual festival in 1932.

The admitted purpose behind the Western New York blossom festival is to put New York state apples back on the map as the best apple region in the world—a position which, the growers believe, the inimitable flavor and quality of their

fruit justly entitles them. Much to this end was accomplished this season when the festival attracted fully 50,000 motor tourists to the belt.

About a month before the festival was scheduled to open, word was sent out to all the high schools in Niagara and Orleans counties, asking their co-operation in the selection of candidates for the choosing of an apple blossom queen. Each school invited responded and named two representatives by student body ballot. Thus it happened that on Saturday, April 25, there assembled in the high school auditorium in Lockport, the capitol city of the fruit belt, a coterie of 32 beautiful girls from 16 different high schools in Niagara and Orleans counties. It was the duty as well as the privilege of the board of judges, made up of well known artists and society folks, to select from this array of comeliness an apple blossom queen and her court of six royal maids.

Urquhart Wilcox of Buffalo, director of the Albright Art Gallery school of fine arts, served as chairman of the judges. The four other members on the board were Anthony J. Sisti, another well known Buffalo painter; A. Raphael Beck, a

Queen Myra I, who reigned over Niagara's first Apple Blossom festival, May 16-23.

Lockport artist, and Mrs. Spaulding Evans and Mrs. William R. Keenan, both of Lockport.

Miss Myra Louise Kuhn, 17 years old, a junior in Tonawanda high school, was chosen as queen of Niagara's first Apple Blossom festival, and the six other girls designated as royal maids were: Irene Thomas, Lockport; Marian Wagner, Lewiston; Grace Bradshaw, Lyndonville; Felice Campbell, Wilson; Anita Brackett

(Continued on Page 6)

Festival leaders and the guest speaker at the first annual banquet in Lockport. Left to right—A. R. Eaton, secretary, Lockport Board of Trade, who managed the festival; Peter G. Ten Eyck, Albany, guest speaker; M. L. Liddell, Burt, prominent grower and member of festival committee; W. G. Merriman, Lockport, committee chairman, and Jack Carlisle, marshal of the queen's tour through the orchard regions.

It's Easy When You Know How

The A.A. Handy Man Talks on Rams, Radios, and Things Mechanical

I am going to install a ram. I have a spring with a 10-gallon flow per minute. I wish to raise the water 40 feet and drive it 500 feet. Could this be done and how much water would I get in 24 hours. The pipe from the spring to the ram cannot be laid in line with the pipe from the ram to buildings. Would this make any difference? I will need about 1400 gallons per 24 hours.—H. T., New York.

YOU have left out some of the figures which we need to determine the amount of water which the ram would deliver. This figure is the fall which you have available from the spring to the ram. Assuming that you have a five-foot fall the ram will deliver approximately one gallon of water per minute which should be ample for your requirements. If you can arrange a still greater fall to the ram you may be able to get a slightly higher percentage of water delivered. It is not necessary to have the arm in a direct line between the spring and the farm buildings.

Electric Motor for Hoisting Hay

What size electric motor is required to operate a hay hoist?

HAY hoisting is an intermittent job and the motor may, without injury, be run to nearly double its normal load. In most cases, the rope speed is slower than when using horses but the time is more than made up in returning the fork. A 5-horsepower motor should be ample to handle almost any hay hoisting job with ease and 2 or 3-horsepower motors will often handle the load. There is a home-made hoist, made mostly of binder parts, that is operated by a 2-horsepower motor. In many cases hoists are operated by the milking machine motor.

Connecting Radio to Lighting Battery

I am using three cells of my farm lighting plant for radio A-battery supply. The plant direction book

says to keep the radio on the same cells permanently, while others say they should be changed. If so, how often?—M. F.

THE plant manufacturers advise attaching the radio permanently to three cells because most batteries fail from under rather than over charging, and if the three cells so used are kept fully charged the rest of the battery is sure to be kept well charged.

This method is no doubt the best where the

A ram, where conditions make it possible to install one, is the cheapest method of pumping water. The one shown here could be improved by building a low-cost foundation and shelter. The drive pipe is on the left at the bottom; the delivery pipe which takes the water to the storage tank is the one leading toward the top of the picture.

radio is small; but with a six or eight-tube set used five or six hours per day, the continual drain runs down those three cells quite rapidly and if the battery happens to be in a warm place there might be danger of overheating the rest of the cells in hot weather, besides the heavy loss in charging the batteries unnecessarily. In such cases, I would prefer to alternate the A-battery leads to different sets of three cells say twice a week; or perhaps better take the A-battery current off a lamp socket through a table lamp, so that the energy used in cutting down the voltage will not be entirely wasted.—I. W. D.

* * *

Drinking Cup Valves Noisy

We have a pressure pump connected directly with the drinking cups in the barn, and every time the cows drink and the valve on the cup closes, it rattles and shakes the pipes. We have a check valve nearly closed on the pipe, but it is noisy just the same. Can you suggest any remedy for this trouble?—C. G.

WHERE the pump or tank pressure is comparatively heavy and comes directly on the drinking cups, these valves are likely to snap and be noisy unless they are designed to work under such pressures. The directions of the manufacturer should be followed very carefully as to the pressure and size of pipe used. One way of overcoming such a trouble is to put a large barrel or tank in the barn loft and pipe the water from this tank to the drinking cups, while the pressure system keeps the water in the tank at the desired height by means of a float control. Another method is to put an air chamber on the supply pipe near the cups to cushion the water when it is stopped suddenly. This need not be anything more than a short length of vertical pipe with a cap at the end, the trapped air acting

One Room Schools in Central Districts

UNDER the new central school law, each individual district cannot vote by itself about joining with the other small districts into a large central district. The decision is made by a majority of voters of all the districts in the whole proposed central district. It is the policy of the Education Department, however, not to lay out a central district until it is assured that a very large majority of the voters, including especially the farm voters, wish to have the central district.

However, it is part of the law, also, that each individual district *can* vote by itself as to whether or not it will close its own school or keep it open for children up to and including the sixth grade. It requires a majority vote in each district before a school can be closed for these small pupils. No one-room school in a central district should be in a hurry to close its doors, nor should a vote to close be crowded through by a bare majority. Fairness should reign and there should be due consideration for the viewpoint of others, particularly of the parents of little children.

Probably it is a good thing for many of these well-located small schools in the central districts to close. Where the children live on good roads not far from the central school, they are better off in a bus under a competent driver than they are afoot on a dangerous crowded highway going to the local school. Also, in many cases they get better teaching facilities in the larger school. But there are other districts not so well located, on a distant hill or over a mountain, perhaps, a long distance on bad roads from the central school, which certainly should not be in a hurry to close their little schoolhouses for the small children.

The whole proposition sums itself up on the question of fair play and common sense. If it is right and proper that the little school should be closed, then most of the people in the district will in time be convinced of this fact. But if they are hurried into a vote which many oppose, then there will be resentment which will take years to overcome.

Are There Five Generations in Your Family?

WHAT is more interesting than people? Do you not like to sit quietly in a public place and watch them hurrying hither and thither, with various expressions of worry, petulance, and happiness upon their faces? What is more interesting than a collection of folks in that unit

which we call the family, especially when there are several generations in the same family?

We wonder how many families in the big A. A. group there are with representatives of five generations living. We have thought that nothing could be more interesting than a set of pictures of A. A. families showing living representatives of five generations. If you are fortunate enough to be a member of such a family, will you not send us a picture of your entire family group, from great-grandpa or great-grandma down to baby great-granddaughter or great-grandson. We will publish every such picture that is clear and for which we have space, and will pay \$2 for every one published. Each picture will, of course, be carefully preserved and returned to you after publication. Send it to the Editorial Department of American Agriculturist, 461 Fourth Avenue, New York City.

Coming—Special Dairy Issue

THESE are critical times in the dairy industry as well as with nearly every other business.

So far here in the East, largely due to organization, comparatively fair prices have been maintained in spite of large production and decreased consumption. But prices of dairy products all around us, and particularly in the great dairy sections of the West, are at rock bottom. Prices will go still lower unless steps can be taken to prevent them.

In order to do our part, American Agriculturist is getting out a special dairy issue, which will come next week. If you are a dairyman, be sure to look for it, for it is our contribution to the present dairy problem and it will be helpful.

The issue will contain short articles by the most prominent men in the industry on the present and long-distance dairy outlook. There will be suggestions for increasing the consumption of dairy products and other articles and information based on the marketing and production problems of the East's greatest industry—dairying. Look for this dairy issue next week.

High Wages and High Freight Rates

WHEN we were very young, Mother occasionally thought it necessary (of course we never did) to correct our youthful errors with a switch from the old apple tree. The licking was bad enough, but what we most resented was her always telling us, "Now, my boy, this hurts me more than it does you." That statement somehow always added insult to injury.

It came to mind this morning when we picked up the newspaper and found that forty heads of eastern railroads had petitioned the Interstate Commerce Commission for an increase in freight rates, and had given for one of its chief reasons the statement that an increase in freight rates was needed to bring back good times! This is exactly the same kind of reasoning indulged in by labor unions and politicians interested in the labor vote, when they claim that wage reductions will prevent the return of good times. Such reasoning is utterly selfish and sounds like trying to make two and two equal five.

Now, we sympathize with the labor unions in their desire to secure and maintain good standards of life for their members. We sympathize with the railroads in their desire to keep their business prosperous. But the railroads claim that neither interest rates nor wages can be maintained on the present freight rates. Therefore, they conclude to take it out of the farmers and other shippers.

Why, we rise to ask, should either interest rates or wages be maintained on war-time levels, when the farmer and many manufacturers are selling their products at the lowest prices in forty years? Slightly lower pay and jobs are better than high wages and no jobs. There can be no sound adjustment of our present depression until both the money lender and the laborer are willing to take adjustments in line with what farmers and others have been forced to take.

While we are on this subject, let us point out

that the states and municipalities responsible for hiring large forces of men are also guilty in slowing up the return to good times by paying too high wages. The farmer, with the present prices for farm products, cannot possibly afford to pay big wages. Yet, what can he do when the men working on the highway that goes past his door receive just about as much per hour as they ever did?

What do you think of this theory, anyway—that the hard times can be helped by the spending of millions of dollars by Federal, state, and municipal governments just to keep men employed? Is it anything more than "robbing Peter to pay Paul?" And Peter is the man who is already paying more taxes than he can bear, especially in hard times.

Tom Marshall, famous one-time vice president of the United States once said jokingly that what this country most needed was a good five-cent cigar. He was wrong. What the nation most needs at the present time is some good old plain common sense.

Now Everybody Can Go West

HORACE GREELEY said, "Young man, go West," but going West in Horace Greeley's time was something of an undertaking, requiring months of weary travel and with the probability of never returning to see Eastern relatives and friends again. Today, by means of organized excursions, it is possible to go West and have an easy, delightful trip, returning to one's home in less than two weeks.

As we have announced several times, American Agriculturist, cooperating with the Northern Pacific Railway, will conduct one of these special trains to Yellowstone Park. We will leave various points on the New York Central in New York State on August 1st, and return in just eleven days. The trip will be so comfortable, with all worry and details eliminated, that it will have great appeal to old and young alike. It is cheaper than one could possibly go alone, even with the excursion rate. There will be stop-overs all the way along the line, with buses and automobiles waiting at the stations to take the party on interesting side-trips.

There are no extra charges for these trips or for any other service. The one charge covers every expense—even to tips. This trip will be one of the chances of a lifetime to create memories and friendships that you will always hold dear. It is time now to make reservations. Write to American Agriculturist, 461 Fourth Avenue, New York City, for full information.

Eastman's Chestnut

THERE is considerable sense as well as nonsense in the following schoolboy philosophy, which, it is claimed, was taken from various examination papers. Read these out loud to your family or to a farm meeting, and I will guarantee you will get a laugh and a good laugh is one of the fine prizes of life.

Average means something that hens lay eggs on.

An antidote is a funny story that you have heard before. (One of Eastman's wormy chestnuts).

Acrimony, sometimes called holy, is another name for marriage.

Matrimony is a place where souls suffer for a time on account of their sins.

An epistle is the wife of an apostle.

A polygon is a dead parrot.

A spinster is a bachelor's wife.

Homer wrote the Oddity.

Lady Macbeth died of sleeping sickness.

Penelope was the last hardship that Ulysses endured on his journey.

In Christianity a man can only have one wife. This is called Monotony.

The zebra is like the horse only striped, and is chiefly used to illustrate the letter Z.

All brutes are imperfect animals. Man alone is a perfect beast.

Martin Luther died a horrible death. He was excommunicated by a bull.

Gleanings from the Mail Bag

Comments by Readers on Gas Leases, Trespassing and Other Problems

I HAVE been greatly interested in your articles on leasing land for drilling purposes and would be glad to have you send a lease as recommended by the Federal Land Bank.

The farm I own formerly belonged to an extremely honest, and trusting old man and was leased by a gas company about 25 years ago. The rental was to be \$100.00 per year for each well drilled and free gas for the property owner.

After the derrick had been set up and the well drilled about half way down, some members of the gas company realizing that the owner was an easy going old man, came to the house, put up a hard luck story about the drilling costing more than they expected, and asked the old fellow if he would be willing to sign a new lease allowing him \$50.00 per well and free gas. Their offer was accepted, the old man signed the new lease, surrendered the first one, and a few days later discovered that the new lease said not a word about free gas, and of course all his protests were useless.

The moral of this true story is obvious. Practically all leases in this district give the property owner \$100. per well and free gas, or, just \$150. per well each year with one eighth of any oil struck, as they know very well no oil will be found in this field. My gas well is now the oldest well in our territory, as the one ahead of it has been pulled out, and produces from 200,000 to 400,000 cubic feet of gas per day. Figure out what this well would have paid to the farm owner all these years at no more than 10c per thousand cubic feet, at 1/8th. We pay for our own gas at the rate of 55c per thousand cu. feet.—E. H.

EDITOR'S NOTE—*American Agriculturist* has said repeatedly that the only fair gas and oil lease from the farmer's standpoint is on a share basis for each—that is, one-eighth to the farmer for oil and one-eighth for gas.

Post Only When Necessary

I HAVE followed with considerable interest your articles on posting and am glad to note that now one posting covers all types of trespassing.

It is too bad posting at all is necessary. I tried to keep from posting my property but one Sunday several years ago while enjoying the quiet of our woods and small artificial lake, we were disturbed by a bunch of young rowdies looking for trouble. When informed the property was private, they accused us of not having it posted, not that this made any difference to them. From that time my mind was set on posting and since I have had it well posted with State Conservation and Farm Bureau signs but people that respect our rights and appreciate privileges are never molested, still there is a class of outlaws that respect neither sign nor padlock. These have always been with us and will continue.

I still dislike posting and hope some day people may be educated to respect private rights on all property and the owner be fully protected by law without the need of this unsightly posting.

Congratulating you on the success you have achieved so far and thanking you, I am, one of the afflicted.—J. D. W.

EDITOR'S NOTE—We fully agree with the sentiments about posting expressed in the above letter and hope no farmer will post his land until he absolutely has to do so to protect his property rights. But when it is necessary to post, we now have a posting law with teeth in it.

Opposes Compulsory Insurance

SOME time ago you asked for an expression in regard to compulsory accident insurance. I think there would be considerable injustice from such action for a number of reasons. A farmer is apt to have several cars and

an old truck which are driven by several in the family. If there were an accident insurance from these drivers they would be responsible because sober driving does not cause major accidents. The cost of insurance under conditions as noted and in numerous other cases would be prohibitive. Insurance is a cheap redress for a serious accident caused by consistently reckless drivers. While it is known that intoxication causes many accidents a driver who indulges should not be allowed a license. One returning from a "lark" is dangerous to ride with, or meet on the road even though he is insured to the limit.—L. M. Van D.

EDITOR'S NOTE—*Compulsory laws of any kind are difficult to enforce. They should not be necessary in a republic and should only be passed as a last resort.*

He Fertilizes Pastures

WE first became interested in pasture improvement about three years ago when our Farm Bureau Manager, Mr. Paul Allen, and Professor John Barron of Cornell, held a pasture improvement meeting at our nearby town. Different methods of improving pastures were discussed at the meeting. For a demonstration for Professor Barron and Mr. Allen we applied 100 pounds of a high analysis complete fertilizer on one acre for three years in succession. The third 100 pounds was applied this spring and this acre was in quite good condition before we started to fertilize it, but today there is a very thick stand of clover on it and the cows seem to graze on this acre more than any other place.

On another acre adjoining this one, we applied about ten tons of cow manure in the late summer and 150 to 200 pounds of superphosphate. The same amount of phosphate was applied each year for three years. It was nearly a year after the manure was applied be-

fore the cows ate very much from this plot, but during that time a great mass of grass came on. The plot we just mentioned was top-dressed late in the summer about August so the next year, during July and August when the pastures began to dry out and grass was short, the cows ate this manure top-dressed plot down real well. Last year we applied 800 pounds of a high analysis fertilizer on four acres. As you will remember last year was a very dry year and the field we used was a very dry field so results weren't very satisfactory.

When immediate results are wanted, we believe the only thing to do is to use a good grade fertilizer, that is, if one has a good pasture field but wants to grow more grass to save feed bills and to have the cows graze there from the start. If one has the manure to spare we think it advisable to use the manure and superphosphate (although the cows don't graze there the first year) because it will furnish real good pasture the next year.

—GRAHAM BROTHERS, Swan Lake, N. Y.

Pasturing Controls Quack

I NOTICED in your paper a request to hear from the readers who had experience in eradicating quack grass. About ten years ago I bought a farm that was so badly infested with quack grass that it was nearly impossible to raise a cultivated crop on the best part of the land.

I fenced the best meadow and turned it into pasture and to my surprise in about four or five years the quack grass was very rapidly being replaced with white clover. I plowed this field after it had been pastured seven years and it was nearly free from quack except a small part that had been manured.

This part was not grazed as closely as the rest and there was more of the

quack that had survived. I do not think that a dairy farmer need to worry about quack grass if he will rotate his pasture and this, instead of being an expensive way of getting rid of the quack, pays big dividends in the milk checks.—F. S. WRIGHT.

Can What You Can!

IN one of your August 1930 issues there was a question asked, "Does it pay a farmer's wife to can?" Also I read many answers to this question and most answers were "no."

Now in your January 10, 1931 issue I read an article about the farmer doing little complaining about hard times. How many of these farmers are there who cannot go into cellar and find food which he doesn't have to pay out money for, which perhaps he hasn't much of? Isn't it much better to eat goods canned in your own home from your own garden? There is a scarcity of work but the farmer has his food in his cellar and doesn't have to worry.

—An Interested Reader.

Results from Salting Hay

IN a recent issue you asked for experiences in salting hay. I have salted hay and have had good luck both with hay that was not any too dry and hay that has been wet by rain. I never measure the salt, but use plenty of it because it is cheaper than hay or build-ings. I have salted all my hay for the last five years. It makes hay better and the cows like it.—F. C., N. H.

I have been farming twenty years and always salt my hay. I have put clover hay in very green and salt it. It comes out in the spring nice and green. I put about six quarts to a load of hay and have never had any hay spoil as yet.—W. J. C., Pennsylvania.

Another "Old Saying"

I DO not know whether you intend to publish any more old sayings, but here is one and the story connected with it, which I think is very interesting.

The saying is, "I'm as busy as the devil in a whirlwind." The story is as follows. It was back in the good old days when it was considered very shocking to talk about the devil and such things especially by church members. One good church member went to call on another early in the morning when she was very busy and in a big hurry to finish some particular piece of work so she said to her neighbor, "Will you please excuse me if I keep right on with my work? I'm as busy as the devil in a whirlwind."

The woman was greatly shocked that such a strict church member as her neighbor was should be guilty of such coarse language. The one who made the remark knew that her easily shocked neighbor would hurry post-haste to the minister of the church and tell him all about what she had said. So she very hastily put on her bonnet and got to the minister first. She told him what she had said and why. The minister was not shocked in the least, but said he would fix it all right with the other woman. The minister was a shoemaker as well as a preacher so when Mrs. A. came bustling into his shop he was pounding away on a pair of shoes as though his life depended on getting them done at just such a time. As she opened the door he looked up with a smile and said, "I'm sure you will pardon me Mrs. A. I'm as busy as the devil in a whirlwind." So poor Mrs. A. could say no more. She could not tell the shocking news she came to tell.

This story is said to be true and originated in Vermont. There is also another old saying I heard as a child which caused me a great deal of childish wonder. "I am as independent as a hog on ice, with his tail frozen in." I failed to see the independence.

—J. L. M., Randolph Center, Vt.

The Weaver's Shuttle

MY grandmother owned a loom. It was great sport to watch the shuttle fly back and forth through the warp.

By DR. J. W. HOLLAND
The A. A. Philosopher

perfect human face, so the darker shades of sorrow and disappointment may serve to bring into relief the gladness of our happier days. After all, what is sweeter than the memory of "a pain that has vanished."

What is woven cannot be easily changed. Pilate meant the same thing, when he said, "What I have written, I have written." This ought to save us from worrying over what cannot be changed. If people could be wise enough to look at their lives as a whole, instead of some mistake or sin that they were foolish enough to commit, it would be better for them. Worry will not change the unchangeable. Unnecessary regrets support half the doctors. Worry lowers our resistance to disease, and makes it impossible for us to be creatively useful and happy.

Ella Wheeler Wilcox wrote:

"I fling the past behind me as a robe,

Worn threadbare in the seams and out of date.

I have outgrown it. . . .

I can weave upon the shuttles of... the future years

A fabric far more durable."

A weaver cannot see the full meaning of his work until it is completed. In the great rug factories in Europe, the workers weave upon the back side of the rug, filling in the pattern that is stamped upon the reverse side. When the task is done, the rug is cut off and thrown face up upon the floor. Then, only, can the weaver see the full import of his work in the blending of the various yarns.

So at the loom of life, The Master Weaver will cut down our work at last, and we will see the perfect blending of the shades where greys and gold commingle.

If we carefully and prayerfully stick to our task we cannot but be satisfied and happy over the sum-total result of our lives.

Dr. John W. Holland

labor in all about twenty-three years.

Our days are really as swift as the shuttle of a modern power loom. We are all weavers, and must each weave into the fabric of our days what is given to us. An Indian sitting at his rude loom, with piles of various colored yarns beside him, said "I can't change pattern, boss he fix that." Whether we like it or not, you and I must do much the same thing. Be the woof of our day's somber or sunny, we must blend them to the best of our ability.

Each life is given a pattern. This is not fixed above our power to modify to some degree. We are still the architects of our own weaving. I love to believe that God has created us for some special purpose, and that the environmental conditions about each of us, can be seized upon by us to promote our best possible character, happiness and usefulness. As an artist uses a darker background against which to paint the lights and high lights of a

A.A.'s Western New York Farm and Home Talk

Cold Weather Hinders Pollination

By M. C. BURRITT

LOSSOM time has come and gone again. The pollination period was far from satisfactory but it was probably good enough to insure a fair crop of the doubtful varieties. Sunday, May 17, was bright and clear but cool—60 degrees—after a rain the day before. That day was the height of the apple bloom period, early varieties beginning to drop their petals and late sorts just opening. May 18 and 19 were bright warm days, almost ideal pollination weather, with temperatures ranging from 65 degrees to more than 80 degrees. Then it turned much cooler again with light rains on the 20th, 21st, and 22nd, and high winds. On the 23rd it rained hard again all day and the temperature fell as low as 40 degrees. Were the two days, May 18 and 19, sufficient for adequate pollination?

As previously indicated, the bloom is heavy, especially Baldwins and Greenings. Occasionally an orchard or individual trees bloomed lightly, but on the whole, the prospect based on bloom is probably for at least a fifty percent larger crop than last year and the largest one Western New York has had in many years. Much can happen yet, of course, to cut it down. With so short a good pollination period the June drop is likely to be heavy. And so much rain will call for very thorough spraying to hold seab in check.

Prospects Good in Virginia

My information is that Virginia is coming back after the severe drought with a much bigger crop than was expected and that her yield of apples will be about her normal production. The period of pollination in the Shenandoah region was ideal. Timely rains have provided the needed moisture there. There will be plenty of competition in barrelled apples. Much will depend upon

our putting up a pack as good as last year.

Unless they have old contracts, cherry growers have a discouraging outlook. There is a big carry-over of the old crop. Practically no buying in advance has been done. The expected price is about three cents and many canners are planning to restrict their packs. A few plants may not be operated at all. The crop is apparently not a very large one but greater than needed this season.

This week, weather permitting, will mark the beginning of tomato planting. The contract factories are beginning the delivery of plants. Here also some of last year's pack remains and there is an inclination to restrict this year's pack and acreage. Contracts are mostly on a graded basis. Contract prices are about the same or slightly lower than last year.

During the past 48 hours we have had a soaking rain during which between one and two inches must have fallen. More water is standing on the land than has been the case in more than a year. The soil is really saturated to considerable depth for the first time this season. It will be several days before it will be possible to get on the land to work it or to plant it.

Who Will Benefit?

A milk price war in Rochester and vicinity is having disastrous results to producers. The retail price has been cut from 15 cents to as low as 9 and 10 cents per quart. Individuals discontented with the League price have given independent milk dealers the opportunity to pay more and sell for less, small quantities of milk, because they ignored any responsibility to take care of surplus. The final result can only be that the price will discourage production, cause heavy losses to dairymen, lead to the sale of cows, and later to a milk shortage, with benefits to no one. When will producers learn that the only answer is control through organization, as Editor Eastman says in his editorial in the May 23rd issue?

Niagara's First Apple Blossom Festival

(Continued from Page 3)

and Evelyn Day, Holley. Festival activities began on Saturday morning, May 16, when the Apple Blossom queen and her court of royal maids and ladies-in-waiting entered Lockport at 10:30 A. M., and captured by acclaim the capitol city of the famed Niagara fruit belt. An absolute monarchy was forthwith proclaimed in the counties of Niagara and Orleans.

After holding court and receiving the homages of her loyal subjects, who flocked in from the border towns and fortresses when they heard the glad news, the Queen with a nod of her royal head expressed the desire to inspect her new domain.

Her slightest word was law.

Prime ministers, grand dukes and earls, courtiers and knights of the Order of the Blossom sprang into being and after a hasty consultation announced that plans had been made for a royal tour through the blossom kingdom on Monday afternoon, May 18.

Gallant old Johnny Applesseed then made his appearance and presented to the queen a basket of gorgeous apple blossoms. This picturesque character, ably impersonated by William LeValley of the Lockport fire department, explained to the court and all within hearing that he was not a mythical character as many supposed but that he actually lived many years ago and in the early days of the country he came into prominence by saving all the apple seeds that came into his possession as he was traveling over this

Niagara frontier region and taking care to plant them all, so that today acres and acres of fruitful apple orchards are the result.

This history-making first annual inspection tour, led by the Apple Blossom queen, started from Lockport with scores of cars in a long motorcade, piloted by state police. For 150 miles it continued, carrying the royal party through the heart of the fruit belt's blossoming orchards. Several high schools along the route were out with their bands to serenade the queen as she passed in her decorated limousine. The charted route took the motorcade along the famous Lake road, on the shores of Lake Ontario, from Youngstown in Niagara county to Yates in Orleans county, where turns were made south and west to land the party back in Lockport after four and one half hours of driving. Villages passed through en route included Lewiston, Youngstown, Olcott, Barker, Lyndonville, Yates, Holley, Albion, Medina, Middleport and Gasport.

Gorgeous displays of blossoms were seen on both sides of the road for more than 100 miles of the trip. Perhaps the most dazzling display of flowers of all were in the orchards which lined the Ridge road in the vicinity of Jeddo and the million dollar highway just outside of Middleport.

The first annual festival banquet, held in Lockport the evening after the inspection tour through the blossom belt, went over the top when a capacity

With the A. A. Livestock Man

Slings for Farm Animals

EVERY Spring we expect some serious problems in maintaining the health of our live stock. Sheep men are quite sure to experience some trouble from paralysis in lambs. And the farm horse is also in danger from a similar disease.

The past spring we had the experience of having three lambs and one horse paralyzed at the same time, the horse apparently having the form known as Azoturia.

It seemed unwise to me to leave these animals lying in this unnatural position on the floor as we know that

sire. An animal usually inherits 75 per cent of his total characteristics from his parents and grandparents—25 per cent from each parent and 6¼ per cent from each grandparent.

The sire's record, which is based upon the production of his daughters, is the most important record in the whole pedigree. His record, therefore, is a record of his power to transmit production. It can reasonably be expected that a proved sire will continue to transmit to his sons and daughters alike the same traits of production that mark his first six or more unselected daughters.

Pasture for Calves

Is it advisable to turn calves out to pasture?—R. F., New York.

BETTER results will be secured by keeping calves in the barn until they are six months old. After that age they will make good use of pasture, but should also have some grain and plenty of water and shade.

Does It Pay to Rotate Pastures?

IN considering ways to improve pastures a suggestion has been made that they be divided into several fields and cows turned into the fields in rotation. Reasons for this are: (1) To have the pasturage consumed at its most nutritious stage. (2) To give the pasture a rest, and thus increase yields. (3) To adjust the pasture area to the seasonal needs of the herd, through either pasturing certain fields or cutting them for hay.

The dairyman of course, in considering whether or not to follow such a plan is interested in knowing the possible returns as compared to the cost of additional fencing. Some experiments made in Canada indicate that the returns from pastures are greater when rotated. Where grass was cut on sev-

One of the sick lambs just beginning to take an interest in life.

eral equal areas at different times it was found that the greatest amount of protein was produced on the field where the grass was cut every three weeks which is very closely comparable to conditions when several fields are pastured in rotation.

Another point in favor of rotating pastures is that cattle are less likely to graze the best parts of the pasture intensively and to neglect other parts allowing weeds to get a start. Time will tell whether these possible benefits will be large enough to make it worthwhile to spend the money for additional fencing.

Hay made of mixtures of vetch and oats, field peas and oats, or the clovers will reduce the grain bill next winter.

This shows how the horse was helped to its feet.

the organs can not function properly while the body is in an unnatural position.

We immediately set to work to place them in the proper position. None of the three lambs were able to raise their heads far from the ground, but we knew that something must be done very soon.

The problem of raising the lambs was simple as it merely required an old bran sack, with four holes cut for the legs, and a light rope attached to the ceiling; or better yet, with a spiral spring at the ceiling which allowed the lamb more freedom in walking about as it became stronger. The dams of the lambs were placed in a small pen with the lambs and the lambs were assisted in nursing. The second day the lambs which were hanging were able to nurse without assistance, though still in the sling. The third lamb, which was fed lying on the floor and turned over several times each day, died the third day.

One lamb was kept continually in the sling for six days and the other for four. Both were released entirely cured.

Suspending the horse was not difficult, as we had three very wide straps which we placed around the body and attached to a one-horse singletree. This was attached to a horse fork rope and a strong horse slowly lifted the invalid to its feet. With just a little support she was able to stand and at the end of ten days was back on the plow, though she was allowed to lie down for a short time each day at first. One thing that favored the rapid recovery of the horse was the fact that fresh green grass could be had to supplement the regular ration of bran and ground oats.

While this article deals only with the cure of these diseases it is encouraging to know that the N. Y. State College of Agriculture is carrying on an experiment with two flocks of sheep to determine whether proper care, feed and management will prevent paralysis.

—JAMES S. MORSE.

How to Select a Herd Sire

IN selecting an unproved bull the thought uppermost in mind should be to get one with a pedigree that strongly promises the transmitting of production traits. First of all, an effort should be made to buy a son of a proved

Treat a power loss like a skunk in the chicken coop

A power loss is a vicious sneak-thief. Ask any factory manager. He will tell you power losses can steal thousands of dollars.

They can rob you too. Even if your tractor is operating perfectly, the implement behind may be slowing up the work, stealing power, and causing excess fuel and oil consumption.

Worn gears, chains and bearings due to improper lubrication with inferior oils and greases are the main cause for power losses. It takes good ammunition to go gunning for this sneak-thief, power losses. By good ammunition we mean constant attention, day after day, with quality oils and greases that *stand up* on the job.

1. On your combine watch out for power losses at these points: cutter bar mechanism, blower bearings, elevator, grain cylinder bearings and reel drive. Apply Mobilgrease to all pressure fittings and vertical grease cups. It sticks on the job and protects bearings and gears from the wearing effect of dust. Brush Mobilgrease lightly on chains. Never use old crankcase drainings on combine bearings. That is sure to cause wear and power losses.

2. A cultivator offers little opportunity for power losses. But remember, cultivating is a long steady grind for the tractor. An improperly lubricated transmission will steal power from a smooth-running engine. If you didn't start the season off by draining and filling up with fresh, high quality oil, you should do so immediately. Don't risk worn gears and a sluggish machine. Consult your dealer for the correct grade of Mobiloil for the transmission.

3. Power mowers offer an unusually good opportunity for power losses to cause excess fuel and oil consumption. Be sure the cutting blades are sharp and clean at all times. If the pitman pin bearing is equipped with a pressure fitting use Mobilgrease. If equipped with grease cup use Voco Wheel Bearing Grease. Where contact occurs between sickle bar and wedge plates, friction loss can be avoided by the application of Mobiloil "CW" with hand oiler.

4. Watch the swinging arm mechanism on a hay baler. It moves slowly, yet under extremely high pressure. If the machine is equipped with an oil reservoir keep it well filled with Mobiloil "CW". Make sure full power is delivered to the swinging arm. Use Mobilgrease in all pressure fittings and open gears. This also gives full protection from the wearing effect of dust and dirt. Use Voco Wheel Bearing Grease in grease cups.

Mobiloil stands up

Because it is Made — Not Found

Lower Grades	17 -19 1/2	16 -19	26 -25 1/2

When the butter market came to a close on May 29, quotations represented a quarter cent gain over the close of the week previous. When the market opened on Monday, May 25, an easy tone characterized the trading. As a result of the easiness, quotations lost a quarter cent bringing 92 score butter to 23 1/4 c. On Tuesday, the market was fairly steady, just about holding the closing figures of the day previous. One mixed lot sold at 23c. On this day some speculative interest came to the front.

SPECIAL DAIRY ISSUE JUNE 13

Next week's issue will feature a story on the dairy situation by H. H. Wing, president of the Holstein Friesian Association of America.

Business turned much firmer on Wednesday and prices went back to 23 1/2 c on creamery extras. On Thursday the market continued to show increasing strength under a very satisfactory demand for current requirements. The price went to 23 3/4 c. On Friday the market closed in good shape with top grades well sustained and cheaper grades averaging fractionally higher. During the latter part of the week butter cleared well, keeping the market in a fairly healthy condition. Just at

The Dairy Situation

Watch next week's American Agriculturist, which will be a special dairy issue, for an article on the dairy situation by E. R. Eastman.

the close business lost some of its snap, inasmuch as practically all of the buyers had satisfied their needs. Receivers are holding their stocks rather confidently in spite of the last minute sag which was more or less to be expected. The Chicago market moved sharply upward on Friday so that it closed considerably above par with New York. However, the New York trade does not seem to pay much attention to the situation inasmuch as there is plenty of butter available in the Metropolitan district.

No Change in Cheese Prices

STATE FLATS	May 29, 1931	May 23, 1931	May 29, 1930
Fresh Fancy	12-14	12-14	17 1/2-18 1/2
Fresh Average			24 -26
Held Fancy	21-23	21-22 1/2	
Held Average			23 -

Prices on New York State whole milk flats have not changed since our last report. However, the situation in the cheese market itself is much better than the price situation would indicate. The West has shown increasing firmness. When the market opened on Monday, May 25, Wisconsin was showing a steadier tone while trading was quiet in the general run of New York State flats. On Tuesday the tone of the market was steadier on desirable lines of fresh cheese. The cured cheese market also showed a little more strength. From then on Western markets continued to show increasing firmness although there was insufficient business in the Metropolitan district to warrant any price advance. At the close local offerings of fresh cheese were not excessive. There were some odd lots of fresh States available at 12c, but for good stock nothing can be had under 13c. If the situation continues at present we believe that the market will be ready for a fractional advance next week. There is very little good held cheese available and what is available, is held in very strong hands.

No Change in Egg Prices

Gathered	18 -22	18 -22 1/2	24-26 1/2

The egg market is substantially the same as it was at the close we reported a week ago. Some of the medium grades unfortunately, are fractionally lower, having met rather severe competition from the West. Business as a whole for the week ending with Memorial Day was not satisfactory. At the opening on May 25, the market reported a continued decrease in collections and lighter receipts than for the same period a year ago. At the same time, the supply of nearby eggs was holding up due to the lighter demand of Eastern hatcheries. Buyers made most of the situation and showed no particular interest even at existing quotations. When we consider the prevailing price on mixed dirties from the West, which are quoted at 17 1/2 c to 18 1/2 c, nearby eggs are selling at a ridiculous price. Pacific Coast storage packed, shell treated, closely selected

extras are quoted at 27c. If there is any justice in that comparison of prices then the writer is a Chinaman.

The lighter offerings earlier in the week were replaced by heavier receipts toward the close. This had a very depressing effect on the market. It looks as though the stories coming from the West of lighter collections are of ghost origin. Advices late in the week ending May 29 reported that Western markets are slightly easier and prices lower. At the same time there appear to be freer offerings of eggs from the Central West than have been expected. All totaled, the situation does not look good for the first week in June.

Live Fowls Gain; Broilers Lower

The live poultry market experienced a good week prior to the Memorial holiday. Live fowls have been in excellent demand. As a matter of fact, there was some shortage, which leaves the market in good shape for the opening on June 1.

Broilers lost some ground. On Monday, the market opened with Rocks bringing 30c to 40c, while Reds opened at 25c to 33c. This represented an advance over the previous Saturday's close, but it proved too sharp with the result that on Tuesday, May 26, prices slipped back to the quotations of May 23. However, the damage had been done for a good deal of stock was attracted to the New York market on the basis of Monday's advance. This created an irregular broiler market for Wednesday, May 27. On that day a few extra choice Rocks went to 38c but the rest of the market went to pot, Reds showing considerable surplus. On Thursday, the big market day, Rock broilers had slipped to 35c top with poor stock selling down to 26c. Reds sold over a range of 22c to 29c and Leghorns at 20c to 26c. Indications were, on Thursday, that heavy accumulations would be experienced so it was decided best to cut loose rather than permit stock to pile up and sell for a song. This policy helped trade for stock immediately moved and it appeared that receipts would clear up by the time the stores closed on Friday night. Those who shipped fancy stock had nothing to worry about for goods showing class moved freely. The undergrades were responsible for some stagnation.

Meats and Livestock

CATTLE—No steers offered. Cows scarce, slow, weak; common to medium \$3.75-4.50; low cutters and cutters \$2.00-3.50.

VEALERS AND CALVES—No vealers nor calves on sale.

HOGS—None offered.

LAMBS—Two loads of good to choice Virginia spring lambs steady from \$11.25-11.50.

COUNTRY DRESSED CALVES—Receipts were light during the week. Trading was slow all through. Small calves were short in supply and obtained almost as much as heavyweights which were too plentiful. Market closed irregular on tops, steady on small. Fresh receipts per pound: 10-13c, depending on weight.

HOTHOUSE LAMBS—Receipts light during the week. Practically no demand. Market irregular at \$3.00-7.00, each. (Season ended).

LIVE RABBITS—Receipts light to moderate during the week. Demand slow, large stock accumulating. Market closed weak at 10-16c per pound.

No Changes in Hay

The hay market closed on May 29 substantially the same as it did the week previous. The supply of hay has been more than adequate to take care

of the business, although the trade has experienced a fairly active call for hay of top quality. There has been absolutely no call for undergrade hay in small bales and concessions have been made to move stocks quickly. It can be said that the market closed just about steady. Timothy has sold at \$19 to \$26 depending on grade. Clover mixtures have brought \$20 to \$24, and grass mixtures \$19 to \$23. Sample hay \$13 to \$18, rye straw brings \$19 to \$20, while oat straw still brings \$13 and wheat \$12.

* * *

MAPLE SYRUP—Market steady. United States Commercial Standard, graded and filtered per gallon: No. 1, 2.25-2.35; No. 2 1.75-2.25; No. 3, 1.65-1.75. (Farmers run equivalent to No. 3) Sugar in casks, farmers run 20-25c.

* * *

WOOL—New York better fleece wool, unwashed, fine, per pound: 18-25c; 1/2 blood 18-25c; 3/8 blood 18-22c; 1/4 blood 18-21c; low quarter blood, 17-19c; common and braid 16-18c.

Foreign Butter Situation

DAIRMEN may be interested in the fact that butter prices in foreign markets made still further decline slightly through the week ending April 30.

The price at Copenhagen was equivalent to 23.7 cents per pound for local butter, while New York 92 score was selling for 22.5 cents. New Zealand butter at London was quoted at 23.5 cents, which was 20 per cent lower than that of a year ago.

We are in the unique situation this year of having our butter going into foreign markets, which means that it is sold on a world price basis.

—from the celebrated painting by Millet
"THE MAN WITH THE HOE"
 "Bowed by the weight of centuries he leans
 Upon his hoe and gazes on the ground,
 The emptiness of ages in his face,
 And on his back the burden of the world,
 Whose breath blew out the light within this brain?
 Is this the thing the Lord God made and gave
 To have dominion over sea and land?"
 —Copyrighted by Edwin Markham,
 the poet, and used with his permission

TRAGIC shadow falling across the pages of human history—the shadow of the man with the hoe. On the bent shoulders of the man with the hoe lay the relentless burden of the world's needs. Through all the ages, in whatever the land, he had toiled so desperately for food and for life itself that he could not lift his face to the light.

Then, one hundred years ago, in the land of promise, came an event destined to lighten the labors and to free the talents of men. Cyrus Hall McCormick invented the reaper, and so made cheap bread a reality before the millions.

The McCormick reaper multiplied many-fold man's strength for the grim battle against hunger. Thus began the conquest of the harvest, a boundless victory. Over the horizon then rose the vision of a mechanized agriculture, lighting the eyes and quickening the hearts of men. Invention came crowding after invention in the train of the reaper and the Golden Age was at hand.

International Harvester, in the time of this

INTERNATIONAL HARVESTER

AND THE GOLDEN AGE *Of Agriculture*

Centennial, pauses to look upon the miracles wrought in the century of progress. All crops and all operations in the march of Agriculture were touched by the magic of the machine. Plowing and tilling, planting, cultivating, and harvesting moved majestically through the routine of the seasons, governed by men no sturdier than their sires but armed now with the powers of giants.

And as the busy hum of farm machines swept onward with the course of empire and spanned oceans to all lands, the few began to feed the many.

Machines were releasing men from the fields for the building of industry. Civilization of a new order rose upon the foundations of the past. Such is the measure of the achievement of the farmer. Such is the glory of Agriculture.

The man with the hoe has straightened his bent back and come into his own. He has taken power and machines, ever more saving of toil and labor, out among the natural resources that are his birth-right and set up the new domain of enlightened Agriculture. The light within his brain, blown out in ages past and now relighted, has shown him the way to heights beyond the hopes and dreams of the peasantry of an older time.

From his comfortable farmstead, in whatever the land, the well-equipped farmer serves all men, and industry in its turn provides him and his family with the fruits of an interlocking civilization. *The International Harvester Company, grateful to have played a part in the making of the modern era, pledges itself anew to the service of Agriculture and of Industry.*

All chassis prices f. o. b. Flint, Michigan.
All body prices f. o. b. Indianapolis, Ind.
Special equipment extra.

The economy of the Chevrolet six-cylinder truck begins with low first-cost. For you can buy a Chevrolet truck with a Chevrolet-built body at one of the lowest prices in the commercial car market.

And this economy continues, day after day, throughout Chevrolet's long life. In fact, leading national organizations who use large fleets of trucks find that no truck of similar capacity gives a lower cost per mile than the six-cylinder Chevrolet.

To drivers of Chevrolet sedan deliveries, 20 miles to the gallon of gasoline is a common experience. Owners of the heavier 1½-ton units report gasoline mileages that are equally impressive. And the engine, even after thousands of miles of service, is extremely economical in its oil consumption.

Furthermore, it costs very little to keep Chevrolet trucks in good running order. For instance, a large percentage of Chevrolet six-cylinder trucks have gone 20,000 miles or more without having their engines opened for major servicing. All because of the ruggedness of Chevrolet-built bodies and

chassis—the freedom from destructive vibration that six cylinders give—and the ability of the Chevrolet motor to deliver high road speeds at low engine speeds.

Today, when everybody is watching costs so closely, farm owners, one after another, are changing over to Chevrolet six-cylinder equipment. With Chevrolets on the job, they are enjoying the lowest transportation costs. And they are obtaining, in addition, higher speed, greater power and larger capacity—with better all-round performance—to handle their trucking more economically!

Farm News from New York

State Forests Open for Hunting --- Long Island Potato Tour

THE reforestation areas recently acquired by the state for planting forests will be thrown open to the public at the beginning of the fall hunting season. If the Hewitt Amendment to the State Constitution is adopted this fall, making possible the complete fulfillment of the large reforestation program, the Conservation Department announces that the hunters and fishermen of the state will, within fifteen years, receive more than fifteen million acres of public hunting grounds. Conservation Commissioner, Henry Morgenthau, Jr., in giving a talk to the

Special Dairy Issue Will Contain Cow Prices

What are cows selling for? The special dairy issue of *American Agriculturist*, which will come to you next week, will give you the going prices for dairy cows in various sections of the New York State Milk Shed.

Buffalo, Chapter of the Isaac Walton League, Monday, said: "It is entirely feasible to combine the uses of the new areas being acquired by the state. Hunters and fishermen are sportsmen and they know it is to their interest to conserve and protect public assets. Therefore, we feel no malicious damage of new plantings will be practiced and that these areas will furnish excellent hunting grounds."

Many farmers will welcome the new ruling since it will relieve the pressure of hunters and fishermen on their farms and in addition will enable them to secure a day's recreation without a long journey.

Long Island Potato Tour

POTATO growers of New York State will be interested in the announcement by the Nassau County Farm Bureau of the fourteenth annual Long Island potato tour. Potato enthusiasts from all sections of the Eastern United States will be in attendance on June 24, 25, and 26. The tour will start from Mineola. Fourteen farms will be visited where experiments and demonstrations are being conducted. Short discussions by authorities from the College and elsewhere will be featured at every stop. Anyone interested may secure the itinerary of the tour by writing to the Nassau County Farm Bureau, Mineola, Long Island.

Jersey Cattle Club to Meet

THE New York State Jersey Cattle Club is holding a field day and picnic the 27th of June at East Schodack, eight miles east of Albany.

Cattle demonstrations, talks by leading dairy specialists of the East and leading Jersey breeders, and a lunch at noon are features of this annual event.

Twenty-five Years Ago

IN looking through one of the back issues of the *American Agriculturist*, we discovered the following news note which we thought especially applicable at this time as it gives a picture of agriculture that some of us have forgotten.

"Cortland, May 16, 1906—Our farmers are busily engaged in putting in their crops but the weather has had a very backward effect, on account of the cold ground and the rain. Many potatoes have already been planted. Oats are coming up nicely. Cows are in good demand this spring in spite of the milk markets being decidedly off. Butter and cheese are starting off badly and the outlook is not very encouraging to the dairymen. Horses in good demand. The roads are being put in shape for the year throughout the county. This county is largely devoted to the dairy interests and the creameries have all opened up for the season

with as general thing, a larger patronage than that of last year. Our markets range as follows: Butter, 20 to 21 cents; potatoes, 65 cents; eggs, 17 cents per dozen; maple sugar 10 cents; apples, 75 cents per bushel; maple syrup, 90 cents; veals, alive, 5 cents; spring lambs, alive 5 cents."

Forty Attend Young Farmers Banquet at Lowville

FORTY were in attendance at the annual banquet of the Mapleland Young Farmers' of Lowville Academy held on Thursday night at the Strife House, Lowville. The banquet on Thursday night celebrated the 20th anniversary of the founding of this department in connection with the local high school. The toastmaster for the occasion was J. Donald McDonald. Peter McGovern, a member of the Board of Trustees of Lowville Academy and Union Free School gave the address of welcome. The history of the department was given by Robert Beyer and an address on "Agriculture, A Field of Opportunity," was given by G. E. Peabody, professor at Cornell University.

In view of the fact that this department has been established 20 years, a committee has placed an exhibit in the show window of the Northern New York Utilities, showing by photographs the eight different teachers of this department and the years of service, also the silver trophy cups won by the judging teams sent out by the school.

The present officers of the club are: President, Robert Beyer; Vice-president, Ralph Beyer; Secretary, Gerald Edwards; Treasurer, Louis B. Poore.

Co-operatives to Meet

THE seventh annual session of the American Institute of Co-operation will be held at Kansas State College, Manhattan, Kansas, June 8 to 13. These meetings, which are held in different sections of the country year after year, are in the nature of a round-up of agricultural leaders. Information is gathered here from various sections of the

Many people write and ask us why their county is not represented in the county notes section. We are always glad to publish county notes, and if your county is not represented, why not try writing something of interest that is happening in your county?

Franklin County—It is stated on the authority of many representative farmers of the county that farm work is much farther advanced than at this date last year. Planting and sowing will be completed about two weeks earlier than in 1930. Last year many fields were too wet to fit until late May and quite a few potatoes were planted after June first, because of soil being too wet, earlier in the season. Pastures are good and cattle are out. Young cattle have been in pasture for several weeks.

President Hoover's new administrative secretary, George A. Hastings, is a native of this county. He was born in Constable, received his education in Franklin Academy, and was in newspaper work here for some years. Franklin County is proud of him and of his splendid record.

Prices are still way down on a number of things. Eggs are so cheap that storekeepers are receiving but few. Creamery butter in tubs is only 23 cents a pound, cased prints are 24 cents.

Spring has been cold until the past week. Rain is still badly needed in some sections. Rivers and streams are low, considering the season. Rangers still watch forests for fires. The dry forest-floor is a serious menace and there have been a few fires, one of which threatened a large area, but

country and plans are made for the betterment of the cooperative movement.

This year the National Co-operative Council, the directors of the National Co-operative Milk Producers' Federation, the Midwest Association of Agricultural Agencies, and the Producers Co-operative Commission Association of East Buffalo, New York, will hold meetings at the same time as the Institute in order that their mutual interests will benefit all.

State Forestry Tour

ANNOUNCEMENT has been made that the State Forestry tour, which will start on June 12, visiting demonstration plantings in various sections of the central part of the state, will leave from Norwich at ten o'clock. The purpose of this tour is to study the progress being made by plantings of different ages, and to find out the suitability of different species for the various localities in which they grow.

New Building at Cornell

THE New York State College of Agriculture at Ithaca is to have a new Farm Management building. Excavations have already been started for a building 280 feet long, 4 stories high, and similar in design to the Plant Industry building completed last year. The department of farm management and agricultural economics has labored for many years under the increasing handicap of limited space. Despite this handicap, it has gained the reputation of the leading agricultural college department in this field.

Dairy Records for March

THE Dairy Herd Improvement Associations are making wonderful progress in New York State. During March, 1524 herds were tested, of which 23 herds made averages of more than 50 pounds of butterfat per cow for the month. Five herds making an average of more than 60 pounds of butterfat per cow, were as follows:

New York County Notes

after twenty-four hours of intensive fighting it was put out. Electrical storms have held off longer than usual, one this week being the first severe one that has been noted.—MRS. W. R.

Genesee County—A terrific wind storm did a great deal of damage on the Elba muck lands recently. The seed was blown from the fields. At Corfu the fire truck was called out to the east side where fire broke out in a house caused by a chimney burning out. Quick action saved what might have been a disastrous fire because of the strong wind. In the afternoon the fire truck was again called out to the town tool shed which was thought to have been struck by lightning. Firemen worked in a pouring rain and blackened sky. The tool shed though left standing, was a total loss. There were too gasoline tanks under the shed and several oil drums in the shed were bulged but did not catch fire. Lightning struck the windmill at Emil Schaefer's, Indian Falls, and traveled along the kitchen sink. Lightning rods saved a barn of William Gabbey's at Pembroke. Only a few shingles were damaged. Lightning destroyed a barn on the same site some time ago.

At the 4-H club meeting held at the Batavia Court House, May 19, Lawrence German of Byron, was re-elected president. Romona Kill, Corfu, was elected vice-president, and Arnold Cranston, Alabama, secretary and treasurer. Warren Hawley was elected leader.

Mrs. Louise Dawley, poultry specialist at New York State College of Agriculture gave a talk.—MRS. R. E. G.

Steuben County—Several hail storms have been nearby lately and on May

Jesse Deyo, of Walkill Valley, Ulster county, herd average of 67 pounds of fat; James Stark, Dutchess county, whose herd of 27 registered Holstein cows averaged 64.4 pounds of butterfat; James A. Young, of North Allegheny county whose herd averaged 63.7 pounds of fat; Bowles and Canfield, Franklin county whose registered Holsteins averaging 1827 pounds of milk, contained 61 pounds of butterfat; and Datus Clark and Son of Clinton county, whose Holstein herd averaged 60.9 pounds of fat.

Bits O' News

Professor Ralph S. Hosmer, head of the department of forestry at Cornell University since 1914, has been re-appointed a member of the Northeastern Council by the Secretary of Agriculture, Arthur M. Hyde.

A preliminary program of the fourteenth annual American Country Life Conference to be held at Cornell University, Ithaca, New York, August 17 to 20, has just been printed and is available for distribution. Copies may be obtained from headquarters of the American Country Life Association, 105 East 22nd Street, New York City, or from Professor Dwight Sanderson, of the New York State College of Agriculture at Ithaca.

The Grange exhibit at the State Fair this fall will be considerably larger than usual, due to the sum of \$5,000 being appropriated by the Legislature at its last session.

Mr. Freestone, in commenting on the appropriation said: "Part of it will be used for special prizes in this department while some also will be used for special prizes to Granges in collecting and arranging their displays and bringing them to Syracuse."

Esther Mae Blackmore of Akron, New York is listed among the eastern district winners in a contest held by the National Live Stock and Meat Board for the best story on the use of meat.

19th a hail storm damaged windows, green houses, barns, and house roofs. Some hail stones were as large as eggs. Branches were torn from trees, and some roofs were ruined and had to be replaced. Many hundreds of dollars of damage was caused. It was the most severe hail storm experienced locally.

The ground is full of water. Not many potatoes planted. It snowed here only recently. Rains nearly all the time. Water stands on many fields. It looks as if many fields would not be planted. Some oats are not sown yet but those that are up look good.—D. C. F.

Steuben County—Quite a bit of damage was done by the hail storm that passed over the county. Farming operations are not progressing very rapidly and many have only commenced seeding. Prices that the farmers get are very low, with butter less than 30 cents a pound and eggs 15 cents a dozen. A number of deer have been seen in this vicinity lately and are getting to be quite a nuisance.

Wyoming County—The Wyoming County 4-H club rally was held at Warsaw High School on Saturday, May 23. A wonderful program was presented and a large crowd of 4-H boys and girls attended. The Strykersville Onawa 4-H club, one of the most active in the county, presented a 4-H pageant which was greatly enjoyed. Other clubs presented a stunt feature and altogether an enjoyable time was had by all.

A committee from the Wyoming County Board of Junior Extension, selected Onalee Finch, Warsaw, and Dean Fisher of Warsaw, to apply for the American Agriculturist award of a trip to Ithaca.—A. S.

DAIRYLEA Dried Skim Milk

A Quality Product For Poultry, Calves, Pigs

DAIRYLEA Dried Skim Milk in poultry rations, insures growth and health. Strongly recommended by feeding authorities. The ideal food for growing chicks. Increases egg production and improves hatchability in layers and breeders. Also excellent for calves and pigs.

Manufactured in plants of the Dairymen's League Cooperative Association, Inc. from the same high quality milk that is approved for New York City. Guaranteed by years of careful laboratory analysis and experiment.

Carried by local feed dealers and feed stores. If there is no representative in your town, order direct from New York office.

Packed in 100 lb. bags and 150 lb. Barrels

Fill out coupon and mail today A.A.

Some Experience With Feather Pulling

IN the May 16, 1931 A. A. I read a request for a cure for feather pulling. L. E. Weaver gives his answer. We agree with him that it is not all uncommon for flocks of chicks to develop the habit of pulling feathers from each other's tails, necks, and backs. We have had this trouble for two years. We do not find the cause due to their quarters. We have ours in a large new coop on a large range. In our study of the matter we find that they mostly pull the pin feathers which causes them to bleed and starts other chicks to picking them. When they start this, we immediately paint the bleeding parts with a pine and tar mixture. We also find that putting strips of paper around on the floor, keeps them busy.

Feeding one pound of rare chopped meat weekly to 300 chicks or hanging a rare piece of beef in the coop keeps them working.

We find that by not keeping the coop too warm the feathers grow faster. Feather pulling seems to be found mostly among white chicks.

—H. S. & A. A.

Range Paralysis

"My chickens (pullets) seem to get something the matter with their feet and legs. They go lame and limp around and then sit down and feed most of the time. Finally they roll over and die. Can you tell me what is the matter and what to do?"—A.C., New York.

THE description which you give of the trouble in your pullets sounds like "range paralysis." This trouble is more or less common in recent seasons and seems to be due to different causes. Sometimes the pullets affected are found to be suffering from round or tape worm infection. Again it may be due to Coccidiosis. And there seems to be evidence of a genuine paralysis which affects the nerves in some cases.

As a rule if the lame pullets are removed from the flock as soon as noticed the trouble will not spread to any extent. The sick birds seldom recover. An effort should be made to determine if worms are present and if so the entire flock should be treated. If the trouble becomes general it is probably chronic coccidiosis and since no successful treatment has yet been worked out, one would do well to dispose of the flock for market stock.—L. E. Weaver.

When To Cull

When is the best time to cull chickens?

THE culling of the laying flock should not be a matter of season, but should be practiced at all times. However, since even the poorer birds lay in the spring and early summer, the most popular time for culling is after the flush laying season is over. A few birds will stop laying in May and June, and if noticed, should be removed. Later in the summer, about July, the systematic culling should be done by handling and examining every bird. If it is possible, the flock should be culled every two weeks until September 1.

Steps to Make the Poultry Flock Disease Free

FOLLOW these practical directions step by step to rid the poultry houses and yards of communicable diseases:

1. Collect all droppings and litter in the houses and spread it at once on a field to which poultry does not have access.
2. Scrape the floors, walls, and ceiling thoroughly, being careful to scrape out all corners so that no dust or dirt remains.
3. Remove and clean out all hoppers, drinking fountains, nests and roosts.
4. Saturate everything in poultry houses and yards with a reliable commercial disinfectant, prepared accord-

ing to the directions of the manufacturers as given on the original package. Be sure that the spray mixture reaches all corners, cracks, and crevices.

5. Repeat the application of disinfectant after 10 days.

6. Board up all spaces under hogpens, corn-cribs or other out-buildings where the hens might stray.

7. Fill all sink-holes or wallows with fresh dirt.

8. Plow and crop, when possible, all places where chickens have been allowed to run.

It's Easy When You Know How

(Continued from Page 3)

as a cushion. Another possibility is to put in the pipe running to the drinking cups a spring controlled reducing valve to hold the pressure on the cups to about 10 pounds. The firm making the cups can supply you with such a reducing valve.—**I. W. D.**

Cleaning Scale from Water Front

We have a water front in our kitchen range that is used for heating water and which has become filled up with lime until the water no longer heats properly. How can this be removed?

ABOUT the only satisfactory way to remove scale from a water front is to disconnect the water front at the unions in each pipe and then fill it with a solution of one part commercial hydrochloric (often called muriatic) acid to three or four parts water, let it stand until the scale becomes soft, and then wash it out very thoroughly with plenty of water under pressure. This acid can be secured from a plumber and it is just as well to let him do the actual cleaning out.—**I. W. D.**

Are Batteries Safe for Firing Dynamite?

Would like to know whether a person could safely use a hot shot battery or a 6-volt storage battery for blasting stumps at a distance of 308 feet, only one charge being fired at a time.

IT is possible to explode dynamite charges either with good dry cells or with an automobile storage battery, but practically all land clearing experts advise against it because of the much greater danger involved and recommend only the regular blast firing generators. A battery will set off the charge if one wire is connected and the other accidentally drops or blows against the other terminal, if a dog brushes against it, and so on. With the blasting generator, not only must the wires be connected, but the plunger must be pushed down sharply. If you do not have a blasting generator, the chances are that you can hire one for a few days through your local dealer in explosives, through your county adviser, or through the firm manufacturing your explosive.

Blasting Stumps

Can you give us some idea of the amount of dynamite that will be required for stumps of different diameters?

BECAUSE of the various factors which materially influence the blasting of stumps, no absolute rule can be laid down giving the required charge for blasting stumps of different sizes, but the following table which is based on the blasting of old but solid stumps in firm, dense soil, can be used as a guide.

Diameter in inches.....12 18 24 30 36 42 48
Number of cartridges..... 3 4 6 7 8 12 15

If the stumps are green, or if the soil is loose or sandy, these amounts must be increased, whereas if the

The Story Thus Far

Jim Stuart rescues Aurore LeBlond from a drifting canoe in the lake.

Jim's trading post has lost much of its business to the rival concern, whose local representative is LeBlond. Jim goes to the island to get a promised letter from Aurore.

Paradis, who has stolen Aurore's note, gets the drop on Jim and starts to take him to LeBlond, but Paradis is outwitted and given a ducking and a warning.

Jim and Omar start for Lake Expanse to see Christie who has charge of the Hudson Bay Post. Christie's daughter, Mary, appears to be more than casually interested in Jim Stuart.

Christie is much dissatisfied with the amount of fur Jim has been able to buy and serves notice that he has one more year in which to make good. On the way back, Smoke, travelling along the shore, saves Jim's life by treeing an Indian who is about to take a shot at them. Omar believes that Paradis hired the Indian to kill them.

* * *

After a silence broken only by the crackling of the birch, Omar removed his pipe, spat into the fire, and again, without turning his head, asked: "You got family?"

Slowly the dark face of the prisoner greyed with fear. His small eyes shifted from Omar to Jim, who watched with curiosity the drama the wily Omar was staging. Then he mumbled a faint, "Eh-eh! yes."

Omar Asks a Few Questions

"If you wish to see the Lake of the Sand Beaches again, you speak with a single tongue," went on the inquisitor in Ojibwa, as if talking to himself, his eyes still fixed on the fire. "You lie to me, now!" Omar suddenly stormed, turning a face distorted with passion on his man, as his iron fingers gripped the Indian's throat, "and I'll feed your heart to the ravens!"

The cowed prisoner flinched from the steel point of Omar's knife which pricked his chest.

"You speak with a split tongue and the wolves will pick your bones!" Omar's left hand closed on the Indian's throat till the terror-haunted eyes of the gasping man protruded from his grey face. Then the half-breed abruptly released him, replaced his skinning knife in its sheath, and resumed his silent contemplation of the fire.

Fascinated by the drama, Jim watched the two across the fire from behind a screen of tobacco smoke. The Ojibwa, caught red-handed, could hope for little mercy from the men he had ambushed in cold blood. But he had information valuable to his captors and clearly was holding it for a high price—his life. Now, Omar had patently started on a campaign to break down his nerve.

"You lak' to see de sun rise onee more?" The stiff lips of Omar scarcely moved as he rasped out the question in English. But the prisoner was silent.

Again the impassive Omar, gazing into the burning birch, was transformed into a fury as he suddenly turned with a snarl on the Ojibwa. "What did Paradees pay you?"

Flinching from the knotted visage of his tormentor, the prisoner nevertheless stoically held his silence.

After a period of motionless contemplation of the fire, the half-breed rose and, taking his axe, stripped a neighboring spruce sapling of its branches.

Then he gathered an armful of dry spruce sticks and birchbark and dropped the kindling at the foot of the tree.

Jim glanced at the Ojibwa. Horror filled the Indian's eyes as he watched the deliberate preparations for the last act of the drama.

Going to his pack, Omar produced some raw-hide thongs, then picking up the visibly shaking prisoner as if he were a child, carried him to the spruce and, binding his arms, lashed him to the tree, and calmly pushed the spruce kindlings around his feet.

But grey as was the face of Omar's victim, on which stood out great beads of sweat, his stiff lips emitted no sound as his hopeless eyes watched the half-breed lift a red coal between two birch sticks and calmly approach the tree.

Paradis Again

"You talk now?" grunted the executioner.

Slowly the dry lips of the Indian moved. "He let dem starve—dees long snow," he moaned, in English.

"Paradees sen' you?" demanded Omar, dropping the coal into the kindlings.

"Eef I spik he drive dem alone into de bush—to starve."

The bark and spruce sticks ignited. The red flames licked slowly toward the feet of the man bound to the tree. Before him, arms folded across his deep chest, waited the implacable Omar.

"Paradees sen' you?" came the reiterated question.

The burning sticks snapped at the feet of the fainting man who fought with his fear. Then, as the heat reached his legs, his nerve crumpled. "W'at you do eef I spik?" he whimpered.

"You spik all de trut' an' we let you go!" came the quick answer.

"I spik," murmured the Indian and fainted where he stood.

With vigorous kicks Omar and Jim scattered and stamped out the fire, then unbound the Indian and doused his face with water while he blinked doubtfully at them from where he lay.

"Paradees sen' you?" repeated the pitiless inquisitor.

The man sitting on the ground nodded.

"LeBlond, he know dis?"

The prisoner shook his head. "Onlee Paradees."

"How he mak' you do dis t'ing?"

"My familie."

The Indian rapidly explained in Ojibwa that two poor winters and a broken leg had put him heavily in debt to the North-West Company for supplies. They had already refused him further "debt" when Paradis had come to him in his desperation and offered to put him on his feet if he would ambush the returning canoe of Jim and Omar whom MacLauren had met on the portage. Furthermore, the Indian, who insisted that he was a good shot, declared that he had intentionally missed the men in the canoe but had to carry through the semblance of an ambush to hold Paradis to his promise. A grim smile widened Omar's stiff mouth. "I go to dis LeBlond, ah-hah. But you go wid me."

"He weel keel me. dis Paradees, eef you tell dem what I spik to you," protested the other.

Then it was arranged that the Indian, whose canoe was hidden up river, should return at once to LeBlond's and

bring his family to Sunset House where Jim would outfit them for the winter. Following this, Jim and Omar secretly decided to take the Indian to LeBlond's and face Paradis. They could count on Pierre Migwan, their prisoner, deserting Paradis and bringing his family to Sunset House, for he would not dare show his face again at the post across the lake, once Paradis learned he had been betrayed. But it would take some urging to get the Indian in the face of Paradis to repeat his story to Louis LeBlond. Yet that was what the friends intended to make him do. LeBlond's head man had been accessory before the fact to an attempt at murder. This LeBlond could not ignore, for Jim would notify Christie at once and a canoe of the Provincial police would appear in September. At last the luck of Sunset House had turned and they would make the most of it. Just what the wily Louis LeBlond and his partner, MacLauren, would do with Paradis was doubtful, but Omar secretly hoped that, under the guise of discharging him from the service of the North-West Company, he would be sent to bury himself in the Pipestone Lake country. There Omar, Esau and Jim were going and there the half-breed prayed he might meet the slippery Paul, face to face, alone, where the ears of no man might hear and the eyes of no man see.

* * *

CHAPTER X

ENOUGH breeze stirred the surface of Mitawangagama to throw a soft slap-slap of ripples against the bow of the canoe as Jim Stuart watched the distant islands masking the North-West Company post slowly clear in definition as the Peterboro rode the liquid miles. Behind him, squatted on his heels, paddled the worried Pierre Migwan whose tipi, supplied with flour and sugar and tea, now stood in the clearing at Sunset House. In the stern, the thick arms of Omar Boisvert, in unbroken cadence, pried the long paddle off his thigh, as he alternately licked his rigid lips and grinned in anticipation of the picture LeBlond and the accused Paradis would make when Pierre told his story. It had not been easy, the persuasion of Migwan, but the promise of absolute protection from Paradis and food for his family through the long snows, with a company job for his dog-team, had at last prevailed against his fears. As for Jim Stuart, his heart beat high with elation, for, after all, he was to see her again before she went south—again watch that intriguing smile break from the corners of her mobile mouth and her dusky eyes light with mockery. Again the waving plumes of her wind-blown hair—black as a raven's wing—touched his face as they stood on the shore waiting for her father's canoe. He was to see her once more before she went south and out of his life forever, this maddening creature who had laughed her way into his blood. Should he have a chance to talk to her? After the episode with Paradis at the split rock, and from the nature of his mission to the post, it was unlikely, unless she saw them land and approach the trade-house. Then if it pleased her, she would ride over LeBlond's orders as she had ignored him that night at the post.

In the Enemy's Camp

And this smooth city man, MacLauren, was he after her as Omar warned him, or was it merely a business trip to his string of posts?

The Peterboro finally slid between two islands and "Bonne Chance," as LeBlond called his fur post, lay before them, in a large clearing across a mile of strait. Jim had never passed so close to the buildings of the North-West company, and he studied them with interest. The two-storied, white-washed trade-and store-house was even larger than that at Lake Expanse while the number of cabins straggling along the shore indicated a large staff of com-

American Agriculturist, June 6, 1931
pany Indians. On the opposite flank of the trade-house a dog-stockade inclosed what was evidently the vegetable garden and the living quarters of Louis LeBlond. From the beach in front of the post extended a log landing, off which rode two York boats.

It was evident from the size of the buildings and the labor expended in cutting such an extensive clearing that the North-West Company had not only come to the Lake of the Sand Beaches with every intention of staying, but that "Bonne Chance" was intended as a depot for future subsidiary posts farther to the north.

Jim smiled stiffly at the thought of what Christie demanded of his own little trading station across the lake with his two aids, Omar and Esau, in competition with the resources of Louis LeBlond. Then the realization that within the hour, he might see, talk to her, drove his business worries from his mind.

The coming of the Peterboro was drawing curious stragglers to the beach. Jim saw the door of the large trade-house open and two men appear, to stand, hands to faces, as if studying the strangers through binoculars. He turned to the men behind him. The face of the Indian was harried with fear. Omar grinned while his slits of eyes, buried between bushy brows and bulging cheekbones, glinted with the light of anticipation. That day he should see Louis LeBlond humbled, threatened with the coming of the Provincial police and his head man, with the sweat of fear on his face at the story Pierre should tell.

The canoe slid in to the beach to a chorus of yelps from the post sled-dogs who were driven off by the company servants gathered to inspect the arrivals. Some called to Pierre, whom they knew, but the worried Ojibwa ignored them. The roving eyes of Jim Stuart sought the figure of a girl behind the shawled dark-faced women who hovered in a group shrilly speculating as to the mission of a canoe from the rival fur post, but were disappointed.

A Cold Welcome

Then LeBlond, accompanied by MacLauren, reached the beach.

"Good day, Mr. Stuart," said LeBlond coldly, glancing curiously at the Indian who pressed closely to the square bulk of Omar.

Stuart shook hands with the two men. "I have some business with you gentlemen," he said, "which will require the presence of my man and this Indian. Can we talk in the trade-room?"

"Of course," answered LeBlond, with a nod toward Pierre. "I know this man."

"Yes, but your man Paradis knows him better," added Jim drily. "Can we have Paradis present at this talk; he might wish to ask Migwan some question?"

"Yes, if you want him." LeBlond looked quizzically at the speaker, then sent an Indian in search of Paradis.

"What's all the mystery, Stuart?" demanded MacLauren with a laugh. "Goin' to accuse somebody of murder?"

"You're a good guesser, MacLauren," bit off Jim, and the glint in his grey eyes caused the partners to exchange surprised looks.

When they stood behind the closed door of the large trade-room, LeBlond asked: "Now, to what do we owe the honor of your call?"

"In law courts I believe the defendant is entitled to be confronted by his accuser. We'll wait for Paradis." Jim turned to the nervous Indian whose uneasy eyes alternately sought the faces of the white men and shifted appealingly to the wooden visage of Omar. "Now, Pierre, you're going to tell this story just as you told it to us. Paradis is not going to put a hand on
(Continued on Page 17)

Aunt Janet's Corner

The Outdoor Living-Room Always Invites You

LAST Sunday, as I comfortably enjoyed the attractions of our own backyard, I wondered why it is ever necessary to seek madly for wild excitement instead of such peaceful and harmless recreation as I was enjoying. The apple orchard was in full blossom, which meant that the air was a-hum with bees, birds, and insects not so romantic. However, I was able to forget the unpleasant features because the pleasant ones were so much in the majority. The row of gorgeous tulips was feast for the eyes and the feeling of self-satisfaction which comes from a mind at rest—if only for a couple of hours—was spiritual refreshment and a good start towards a busy week. The cat bird, the oriole, the wee humming bird that darted busily above our heads, the robin that hunted on the lawn for his supper, the old cat that came and sat at our feet or in our laps, were all a part of this quiet Sunday afternoon.

As I sat and enjoyed these simple pleasures which anyone might have, I thought how easy it would be to convert this back yard into an outdoor living room which would be ready without the ceremony of transporting chairs through doors and down steps. Steamer chairs with a small awning above, which stand wind and weather would always be ready for occupancy. Any comfortable old chair which is painted to resist the damp and with pillows

covered with gay oil cloth would not have to be rushed indoors when rain threatens.

A painted table or one covered with colorful oil cloth would serve for the impromptu meal or for the children to spread their play things on. Such an outdoor living room would not be complete without a hammock or a lawn swing. Barrel staves have been known to make a very satisfactory hammock

For All-Day Wear

3114

DRESS PATTERN NO. 3114 provides a very attractive design for a useful all-day dress. The model shown here is crepe silk print in rather vivid blue coloring. Chiffon print, or lace could be used for afternoon wear. Eyelet or printed batiste, printed voile, or handkerchief linen are dainty and summery for hot weather wear. Pattern cuts in sizes 14, 16, 18, 20 years, 36, 38 and 40-inches bust measure. Size 16 requires 3½ yards of 39-inch material. PRICE, 15c.

when a better one was lacking. They have the advantage of staying stretched out and two or three children together could have a wonderful time swinging in it.

I am taking it for granted that this outdoor living room is shaded, for as the sun becomes brighter, and hotter, shade is necessary. If trees are lacking, substitutes may be devised. A beach umbrella which fits into a hole in the ground or a fly, such as is attached to the side of a tent could be attached to the side of the house.

The first requisite is that the surroundings be attractive enough to furnish pleasure while using this outdoor living room. A hedge, a green lawn, a border of flowers, or plants in tubs and pots, if the border is lacking, could be arranged so that instead of the famous and expensive penthouse or roof gardens which are so treasured in New York, one may have his outdoor living room just outside his kitchen door. Needless to say, the display of intimate

Tailored Simplicity

3090

DRESS PATTERN NO. 3090 shows the smart simplicity of the tailored model. The collar is quite novel and may be carried out in contrasting color or fabric. The dress itself may be of linen, gingham, printed batiste, printed or flat washable crepe or shantung in nicker sized dots. Pattern cuts in sizes 14, 16, 18 years, 36, 38, 40, and 42-inches bust measure. Size 36 requires 3½ yards of 39-inch material. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with correct remittance in stamps. Add 12c for one of the new Summer Catalogs and address to Pattern Department, 10 N. Cherry Street, Poughkeepsie, N. Y.

what! soap is all you see? ...lend us your nose!

Turn back the wrapper, hold a Fels-Naptha bar up to your nose and smell it. The clean naphtha odor tells you that Fels-Naptha is more than "just soap."

There's plenty of naphtha in every big, generous bar. It's combined with the good golden soap. And that's why, whenever you use Fels-Naptha, you get the extra help of two safe, energetic cleaners. Naptha, the dirt-loosener, and soap, the dirt-remover. Working busily together, they coax away even stubborn grime. No hard rubbing needed. The washing is easier for you. And the clothes have that fresh, breezy, right-off-the-line fragrance you like so well!

Thanks to this extra help, Fels-Naptha works beautifully in tub

or machine; in hot, lukewarm or cool water; whether you soak or boil. Fels-Naptha contains glycerine, too—and you know how nice that is to hands. Ask your grocer for some Fels-Naptha today. Buy it in the handy 10-bar carton.

Special Offer—We'll be glad to send every user of laundry soap a sample bar of Fels-Naptha and a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use the chipper and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naphtha!) just as you need them. Send only 4 cents in stamps to help cover postage, and we'll mail you the chipper and sample bar without further cost. Write today. Fels & Company, Phila., Pa. Dept. 1-6-6.

family life should be screened from the gaze of passers-by, either by the house itself or a hedge. If the "furniture" is already there and invites you to come, the chances are that many a short rest will be snatched in these pleasant surroundings that otherwise would be missed if the fixings have to be arranged every time.—AUNT JANET.

UTILITY BAG NO. B1570 comes ready made and hand tinted in bright shades in a durable quality of tan crash. The bag may be used without embroidery, but outlining the flowers, leaves, and basket with black or matching floss in long running stitch adds much to its attractiveness. Such a bag is constantly in demand during the summer, for books, parcels, shopping, or handwork, and adds a pretty touch of color, wherever it is. Price, per bag, 45 cents. Order from Embroidery Department, American Agriculturist, 10 North Cherry Street, Poughkeepsie, N. Y.

Vacation Days are here again!

So nearly here, at least, that it's time for you to be thinking about your Summer wardrobe.

We've prepared a book to help you plan for the most colorful fashion period of the year. A book that offers the best selection of styles for the season for the adult, miss, stout and child, and helps the reader to economize.

You can save \$12 by spending 12 cents for this book. The edition is limited so we suggest that you send 12 cents in stamps today for your copy to Fashion Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Milk is less likely to burn and stick to the saucepan if the pan is rinsed with cold water before the milk is poured in.

Niagara's First Apple Blossom Festival

(Continued from Page 6)

crowd of more than 200 persons sat down to feast in the presence of royalty.

Toastmaster Henry B. Otway of Lockport in his introductory remarks referred to the big gathering as a history-making event, saying that "your children and your children's children in the future will look back to this night." He visioned that the festival, started so auspiciously this year, would grow into an immense annual function within a few years.

The guest speaker of the evening was Peter G. Ten Eyck of Albany, former U. S. representative and a past president of the New York State Farm Bureau Federation. Mr. Ten Eyck had been on the tour of inspection in the afternoon through the Apple Blossom queen's flowery domain in Niagara and Orleans counties and he centered his talk about the good resulting when city folks and farmers get together and work for such an objective.

"This festival will serve to put New York state apples on the map," Mr. Ten Eyck declared. He expressed the hope that the entire state would work as a unit in thus advertising its apples—"the finest in the world."

City and village mayors from the fruit belt region, legislators and prominent fruit growers were numbered among the big attendance at the banquet. Those introduced were Mayors Orrin C. Blount of Lockport; Daniel W. Hanley, Albion; Claude W. Grinnel, Medina, and John Beyer of Tonawanda, the home city of the festival queen; Assemblyman Roy Hewitt of Lewiston; Assemblyman Fayette E. Pease of Lockport, president of the Niagara County Agricultural Society, and U. S. Representative Archie Sanders of Stafford.

Among other prominent men present were General John S. Thompson, Medina; E. G. Cowper, Newfane, vice-president of the New York State Horticultural Society; C. H. McClew, Newfane; William J. Hall, Warren's Corners, and Harry C. Wellman, Kendall (master farmer), all former presidents of the Horticultural society; E. E. Arnold, Barker, chairman of the Niagara county board of supervisors; Thomas Marks, Wilson (master farmer), president of the Niagara County Farm bureau; L. A. Muckle, Lockport, manager of the Niagara County Farm bureau, and Elton Wagner, Albion, manager of the Orleans County Farm bureau.

The concluding event of the 1931 blossom festival in the Niagara belt was to have been the coronation of the queen at the Niagara County fair grounds in Lockport on Saturday, May 23. Cold, rainy weather, however, necessitated the postponing of this closing ceremony to the following Saturday, which was Memorial day.

Niagara's first Apple Blossom festival was an outgrowth of the observance of National Apple week which has been celebrated in Lockport each October for the last three years. The fruit committee of the Lockport Board of Trade, which arranged for these celebrations, met soon after apple week last fall for the purpose of discussing future plans.

Members of the festival committee are A. R. Eaton, secretary of the Lockport Board of Trade; W. G. Merriman, chairman; Assemblyman Pease, K. W. Strauss, L. A. Muckle, A. C. Tovell, W. J. Ryan, G. L. Pugh, George Gunby, all of Lockport; W. C. Tyson, Gasport; M. L. Lydell, Burt; G. W. Mead, Barker; Bruce Gaskill, Gasport; George Schultz, Appleton; Leonard Vogt, Gasport; Merwin Treichler, Pekin; Ernest Bradshaw and H. M. Meyers, Ransomville; Carl Coates, Barker, and Lanford Dobbins, H. D. Aiken, J. A. Hall and Harry Kelley, all of Lockport.

"He Who Manages Affairs"

(Continued from Page 2)

company of his forest brethren thronged the grounds and pressed even within the doors of the mansion. Then as the day waned and the end came, there swept over the crowd now a low moaning chorus of woe, now piercing cries of grief because The Great Tree beneath whose branches they had always found shelter, was at length fallen.

So Sir William Johnson of Johnson Hall, Brother Warraghiyagcy of the Mohawk nation, trader, explorer, soldier, man of affairs and master of men, Friend and Brother of the Red Man went out with no pilgrim staff or guide to see the wonders of the Undiscovered Country.

WHEN SILENCE IS IT GOLDE'N IT'S AWFUL EXPENSIVE

A Question About Trespassing

Your no trespassing notices were received and I have affixed my name and address to these. Now, certain neighbors and acquaintances tell me that these signs do not prohibit the wading of a brook for fishing purposes. Would one be allowed to jump in the brook from a bridge, and fish in the stream providing he remained in the water?

WE are assuming that the brook our subscriber referred to is entirely on his property and that it is not navigable. If this is the case, his neighbors are entirely wrong and anyone who fishes there, whether they walk on the bank or wade up the stream, can be arrested and fined for trespassing. To quote the Conservation Department on this point:

"We wish to advise you in reply, that in the event that a stream was posted pursuant to the provisions of Part Ten of the Conservation Law prohibiting fishing and the person posting the stream owned the bed of the stream or had leased the fishing rights thereof, it would be a violation of these laws for a person to fish in the stream that was posted by wading the stream or otherwise, unless he had the written consent of the owner."

Where a person is prosecuted for a trespass committed where lands are posted under the Conservation Law, it is necessary that the person posting the lands prove that he either owns the lands or has the exclusive hunting and fishing rights thereof."

In case you own a farm bordered by a stream you, of course, cannot prevent people from fishing from it from the other side of the stream if the owner of the property adjoining it there does not post the land. It is also true that if your deed only reads "to high water mark" or if the river is navigable you cannot prevent persons fishing in the

water either by wading or from boats.

We will be more than glad to answer all questions pertaining to trespassing for hunting, fishing, or any other purpose. If we do not know the answers we will refer them to the Conservation Department to get their official opinion on the matter. The Conservation Department has pledged its assistance in enforcing the no trespassing act.

Something for Nothing

Will you please give me information concerning the Chicago Portrait Company. Their salesman called here and as I drew the blue seal which gave me the three paintings for \$15.00 I let him take the photographs which I wished painted but didn't make any cash deposit. I am enclosing an article which was in the Utica Daily Press after he was here and would like your advice as to whether or not I would be compelled to accept pictures and pay their agent \$15.00 when he calls again.

OUR subscriber enclosed a local newspaper clipping stating that several complaints had been made to the local Better Business Bureau against a picture enlarging firm. No name was mentioned in the newspaper item but the facts as given are very similar to those our subscriber tells.

We are only able to tell our subscriber that he has signed a legally binding contract but that we have never yet known of a case where any picture enlarging company actually brought legal action to collect in case their work was refused.

Had our reader followed carefully the Service Bureau columns in American Agriculturist he would have found that we repeatedly referred to this picture enlarging concern as one which has not

given satisfaction to our subscribers. We say this because of the many letters we have received from subscribers expressing their dissatisfaction along this line.

The Old Linoleum Game

About a week ago two men stopped at our home. They claimed to be trying to dispose of some linoleum which they said had been bought by a prominent hotel in a town about twenty miles away. The hotel had decided not to use it due to some interior changes they had decided to make. We bought two rolls of it taking their word for the length of each roll which they said was 24 feet.

Upon learning that a different story had been told at a neighbor's house where they made a sale we became skeptical and upon measuring found we had been cheated six running feet on each roll. This made a loss of \$6.00 to say nothing of the fact that the linoleum is not what they claimed for quality.

I do not expect to be able to recover my money but I thought you might be glad to advertise them in your paper for the benefit of others.

THIS is a game which is apparently practised about every so often. Those who swindle money from our subscribers by this method rarely stay in one place long and it is almost impossible to locate them. For this reason we cannot hold out much hope of getting settlement and we are publishing this letter for the benefit of other subscribers.

Get the Money First!

I have received two letters from a Chicago firm asking for the addresses of certain friends of mine. I do not want to get them into trouble. Could you give us any idea of what they are after?

OUR subscriber enclosed one of these letters which comes from the Inheritance Service in Chicago. We have no information in our file about this particular firm and are making an investigation. However, we do know that some firms are working clever games by indicating to certain people that they are in line for a legacy from some distant relative. On the face of it this sounds harmless but when such firms begin to ask for advance payments in the way of lawyers, retainers, etc., in the matter takes on a different complexion. Led on by the hope that they may get some inheritance, some people will forward money to the company.

Up to date we do not know of anyone who has received any legacy through any such transaction. If any of you get such a letter we suggest that you make an agreement with them whereby you will pay them after you get the legacy rather than before.

Not An A.A. Advertiser!

Last fall I sent for some pullets to R. E. Sandy of Stuarts Draft, Virginia, and he did not send them all to me. Since that time I have written to him asking to have my money returned but have not heard anything from him. Will you help me collect this money?

WE have written to Mr. Sandy twice and although the letters have not been returned we have had no reply from him. We are publishing this information for the benefit of other subscribers who might be inclined to send to Mr. Sandy for pullets. Meanwhile, we are sticking to the claim. We always keep at a matter of this kind as long as there is the slightest chance that we will be able to get a settlement.

Under Frozen Stars

(Continued from Page 14)

you or bother you on the way to the canoe. If he tries it—"

The blood flamed into the dark face of LeBlond as he broke in: "You're pretty free with your talk here, Stuart!"

Jim's cold, grey gaze met the frown of the other. "You'll understand when you hear his story," he said quietly.

Paradis opened the door of the bedroom, his dark features picturing the strain under which he labored, but he evidenced no surprise at the presence of the men from Sunset House. He met the glittering eyes of the Ojibwa,

Jim's amused smile, and the savage glance of Omar, who stood, arms folded the fingers of his right hand touching the handle of his knife, with equal indifference.

The Indian Tells His Story

"Good day, Monsieur Paradis," said Jim, "Pierre, here, has a little story to tell to your employers." Turning to the excited Indian, Stuart continued: "Now tell these gentlemen just what you told us."

"What have I to do wid thes Indians?" demanded Paradis, assuming an air of surprise, as he stroked his small moustache. But Jim noted the unsteadiness of his hand.

"Keep quiet!" rasped the interested and perplexed MacLauren. "Let him tell his story."

Questioned by Jim when he faltered, his eyes shifting fearfully from the black face of LeBlond to the sneering Paradis, Pierre told, now in English, now in Ojibwa, how he had been refused supplies for the winter because of his old debt, and in despair was about to leave with his family when Paradis approached him with the scheme to ambush Stuart's canoe on its return up the Woman River from Lake Expanse.

As Migwan accused Paradis of plotting the shooting of Omar and Jim, the sneer faded from the head man's face. With a snarl he flung at the Indian: "You lie! You dirt eater!"

"One minute, Paradis!" rasped Jim. "Let him finish!"

LeBlond was studying his assistant through narrowed eyes as MacLauren snapped: "Keep out of this, Paradis! You'll have your chance!"

The Ojibwa went on to tell of the ambush and his capture by Smoke.

THE EDWARDS MANUFACTURING CO.
612 - 652 Butler St., Cincinnati, O.

With a **FORD TRUCK** you can save on every hauling-task

MANY farmers profitably use Ford trucks to extend their marketing range. You learn by radio, telephone, or from the daily reports, when and where to sell your products to best advantage. The nearest market is not always the best market. Often a few additional miles mean higher prices.

The Ford truck brings this favorable market within easy reach. Because of its low first cost, long life, and operating economy, it will cover the extra distance at a minimum cost per mile. The 40-horsepower engine and 4-speed transmission give it abundant power to haul capacity loads, and the speed to cover distances quickly. You will find that these added miles to an advantageous market will repay you with extra profits.

With its spiral-bevel-gear rear axle, of three-quarter floating design, its sturdy frame with five strong cross-

members, its heavy front axle and spring, its medium-speed engine, and its torque-tube drive, which relieves rear springs of abnormal strains, the Ford truck will give long and faithful service for many thousands of miles.

The Ford 1 1/2-ton truck chassis is available with either 131 1/2-inch or 157-inch wheelbase. It can be equipped with stake-sides or cattle-racks, for use on the standard platform body. There is a choice of open or closed cabs, single or dual rear wheels, and high or low rear-axle gear-ratios.

In addition to meeting practically every hauling requirement of the farm — either on the open road or in the field, the Ford truck is also a readily available source of stationary power. This added value comes through the new power take-off which, for a small additional cost, can be fitted directly on the transmission.

It is highly useful and economical for driving orchard sprayers, feed grinders, water pumps, corn shellers, buzz saws, etc.

See your Ford dealer. You may purchase a Ford truck on convenient economical terms through the Authorized Ford Finance Plans of the Universal Credit Company.

Saving in operating costs pays for new trucks

The Farmers Cooperative Creamery, of Sioux Center, Iowa, traded in 13 old trucks for 13 new Ford 1 1/2-ton trucks, in February, 1930. They write that during the first year, the saving in operating expense paid the difference in cost of the new Fords, paid the operating costs of these trucks, and left money to spare. This excellent record is but one example of the definite economy Ford trucks offer. Other operators, everywhere, are receiving equal value.

What Can Dairymen Expect?

A Look Ahead Based on Years of Experience

By H. H. WING

President, Holstein-Friesian Ass'n., of America

IN RESPONSE to your request, I am quite willing to express my views on the present conditions and future outlook for the dairy industry in the north-eastern United States; although I do not feel especially qualified and have no statistics to offer and no prophecies to make; and although what I may say is based upon observation, even superficial observation, rather than experience.

In periods of depression like the present it is quite unorthodox, and one is venturesome to attempt to show that conditions bad as they are, are not without some redeeming features and that there is no silver lining to the cloud. Of course prices are low, much lower than they should be, and there is overproduction and underconsumption of dairy products; and there is competition

with oleomargarine, and possible competition with milk and cream from the west, and tuberculosis, and abortion, and hard labor, and hired men, and etc., etc., ad nauseam and ad infinitum, even to daylight saving time.

Nevertheless, it seems to me, indications of prosperity are not hard to find, perhaps because I am an optimist, for which I humbly give daily thanks. I drive about quite a little and from time to time visit numbers of dairy farms. I see many comfortable farm houses with telephones, electric lights and radio antennae. I see large barns, many of them recently painted, and in the yards and pastures herds of cows, mostly high grades, mostly well fed and mostly giving evidence of abundant production. (Sometimes they have been out in pretty cold weather, and once my wife remarked that

they looked rather dirty, but that was in March).

I meet the owners of these farms in various places and on various occasions at which cow men are wont to gather together; and while most of them grumble more or less about "the depression", they have a cheerful well fed look. They are well dressed in comfortable clothes, and they have the wherewithall in their jeans to pay for good meals and a night's lodging. Now all of this comes from the product of these same cows, for I am speaking of districts where almost the sole farm income is from the milk sold. Not of a few isolated localities where other conditions may be especially favorable, but of all the dairy regions of the north-eastern United States and especially of those great dairy counties in central and northern New York, Madison, Chenango, Cortland, Onondaga, Delaware, Otsego, Schoharie, Herkimer, Oneida, Oswego, Jefferson, Lewis and St. Lawrence, a considerable part of the "New York Milk Shed."

A Special Issue for Dairymen and Cattle Breeders

Let's have a SHOWDOWN

on this matter of

TIRE COMPARISONS

WITH all the conflicting claims published about tires, it is obvious that misleading statements are being made. The only conclusion that you as a tire buyer can draw is that either we are misrepresenting Firestone products, or that a certain mail order house is not telling the truth about theirs. Both can't be right—one or the other is misleading the public by their comparisons.

Firestone, in their advertising, only make comparisons that can be easily verified by the customer before buying tires. To attempt to substantiate the comparisons made by this mail order house, it would be necessary to go into a laboratory and employ experts.

The very reason that the comparisons made in Firestone advertising enable you to get

Go to your Firestone Dealer and see for yourself sections cut from various tires

the facts yourself, makes it unnecessary for Mr. Firestone to make affidavit on the truth of his statements or to file any complaint with the Federal Trade Commission, and then advertise it, in an attempt to lead the public to believe his statements were true.

Mr. Firestone doesn't ask you to accept comparisons about Firestone Tires and special brand mail order tires until you see the facts yourself. All we ask is that you make your own comparison.

Your Firestone Dealer has cross sections cut from special brand mail order tires purchased from stocks of mail order house and Firestone Tires—no "tricky" or misleading comparisons. See him today and make your own comparisons for Quality, Construction, and Prices. YOU and YOU ALONE be the judge!

Cow Prices in the New York Milk Shed

The Trend is Downward - What Are They Bringing in Your Neighborhood?

ANY times during the past two or three years we have said editorially that cattle prices in the New York Milk Shed were too high. Right now there is a downward trend, but letters and comments indicate that prices are coming down more rapidly in some dairy sections than they are in others. Believing that you would be interested in the situation all over the milk shed, we asked a number of dairymen to tell us what cows were selling for in their vicinity. Here are their replies:

Greene County

"There has been quite a drop in dairy cows throughout Greene County. I would say a 20 to 35 per cent reduction according to locality. Fresh cows are moving slowly at around \$90 to \$100 that a year ago would bring \$125. Purebreds are very slow, except young stock. Purebred Guernsey calves that would bring \$100 to \$125 a year ago, bring \$75 to \$90 now, but most breeders of registered stock are holding tight waiting for better prices. However, there is a limit as every Guernsey cattle breeder in Greene County is overstocked at the present time with cows. Would say that very few grade calves are being raised. Quite a few farmers are vealing calves.

"Following is the nearest sure estimate I can give:

Grades (according to quality), \$65 to \$110; Purebred Guernseys, \$100 to \$200; Purebred Holsteins, \$85 to \$150; Purebred Jerseys, \$75 to \$125; Culls and Cannors, \$15 to \$40."

—FLOYD C. MILLER, *Athens, New York.*

Orange County

"I can give you very little information as I have bought no cows this past year and only

sold one, a large, fat cow which would weigh 1400. I got seventy-five dollars. I have not attended a cow auction for the past year. We have been raising about ten calves a year and will soon be overstocked. I think the number of calves raised this year is about as other years in this section."—D. V. FARLEY, *Goshen, N. Y.*

Thompkins County

"I can buy fairly good fresh or nearly springers, grade Holsteins (young) for \$100. Purebred cows cost \$25 to \$50 more; culls or cannors, from \$5 to \$25; fresh, small and thin, grade Jerseys and Guernseys, around \$50. A Guernsey or Jersey of good size that will give 40 or 50 pounds of milk costs about the same as a Holstein. I think fewer calves are being raised."

—C. A. MOTT, *Dryden, New York.*

Washington County

"I seldom attend a cattle sale but from what I hear grade cattle are very much lower in price than they have been for several years. Fresh cows are selling from \$80. to \$100. each, and cows freshening in September and October are selling from \$40. to \$75. each.

"It seems to be a rather hard proposition to move the culls. Some farmers are fattening them and I have heard of selling them for 5c to 8c a pound dressed. Purebreds are selling better accordingly than grades, as is always the case, at a time like this. I think there are about the same number of calves being raised as usual."—GEORGE MCGEOCH, *Cambridge, New York.*

* * *

"From my observation of cattle movements during the past winter and this spring, I would say that in this section there has been little demand and prices are somewhat lower. At the

better sales and Washington auctions, good purebreds passed under the hammer at from \$125 to \$150, with outstanding individuals selling at the \$200 mark. A good bunch of two year old grade heifers were brought in a few days ago at \$25 each. These came from sections where hay was short.

"Good young cows, high grades, just fresh, can be purchased from \$100 to \$125. Very few calves are being raised in this section."—T. G. REYNOLDS, *Cambridge, New York.*

Wayne County

"I think that dairymen are raising about one-third as many calves as usual. The top price for fresh purebred cows is \$150 and from there down to \$100. Grades bring from \$75 down to \$40. There is no market for dry cows, except to the butcher. Those weighing 1300 pounds or better are bringing around \$60. Culls and cannors are bringing only \$10 to \$15 with a slow market."—H. HARRY WALTERS, *Newark, New York.*

Ontario County

"I believe that the poorer grade of milkers have dropped in price more than the better ones and will state my ideas of prices as follows: Good purebreds, \$150 to \$250; good grades, \$90 to \$120; fair grades, \$70 to \$85; culls and cannors, \$20 to \$65, as to quality. Deduct about 10 per cent for dry cattle. I think less calves are being raised but of a better quality."—W. B. ONDERDONK, *Hall, New York.*

Franklin County

Cows are surely on the downward trend in price and fewer calves are being raised in this locality than last year, probably 25 per cent. Just across the border in Canada milk for butter is
(Continued on Page 11)

Keeping the Bacteria Count Down

A Brief Review of Fundamental Sanitary Dairy Practices.

UNTIL the recent slump in demand, the per capita consumption of milk in New York City increased steadily. There is every reason to believe that as soon as industrial conditions improve consumption will get back to normal and will continue to increase.

There is a definite relation between milk consumption and quality and there is much that can be done to maintain and improve quality without adding to costs. Here are a few questions that dairymen have asked us about milk:

* * *

Does washing cows' flanks and udders have any relation to milk quality or is it just a foolish idea?

Actual experiments have shown that wiping cows' flanks and udders with a damp cloth just previous to milking helps to keep down bacteria in the milk. In general, the cleaner the cow is the cleaner the milk will be. When cows are in pasture, it is important that the barnyard be kept dry so the cows are not required to wade through mud to get into the stable.

* * *

What are the important points to watch in order to keep milk clean when milking is done by hand?

There are two main things to keep in mind; first to keep all possible dirt out of the milk and second, to have every utensil with which the milk comes in contact, thoroughly sterilized with boiling hot water. Experiments have shown that small top milk pails keep out a lot of dirt. The cleaner the cows are kept the cleaner the milk will be, although, of course, any grooming should be done after milking

rather than directly before. The milk pail or can that is not properly sterilized can add millions of bacteria to milk which will lower its keeping quality.

* * *

Can cleaner milk be produced with a milking machine than where milking is done by hand?

Milking machines, of course, keep out all external dirt. On the other hand, it is more difficult to keep a milking machine clean and sterile than it is a milk pail. Dairymen had some trouble with the bacterial content of milk with the earlier machines. Now, if the manufacturer's directions are followed, milk of just as high quality can be produced by machine as can be by hand. In fact,

some producers of certified milk now use milking machines.

* * *

Is it possible to produce clean milk by milking with wet hands?

No. There may be a few people who persist in this habit. We could never see that it is any easier to milk with wet hands and anyone who has tried it or seen the results, will agree that it is not a clean way of milking. Fortunately, it is used very little, if any, at the present time.

* * *

How soon should milk be cooled after it is produced? Is it good practice to wait until the can is full and then put it into the cooling tank?

The sooner milk is cooled the better, yet the results will be excellent, assuming that all utensils are clean, if you wait until the can is full and then put it into the cooling tank. Scientists claim that when milk is first drawn it has the power to inhibit (stop) the growth of bacteria. If milk is cooled within an hour after it is drawn and kept cool it will keep for a long time.

* * *

When milk cans are returned from the plant, should they be turned bottom up to dry or left standing with the covers on?

If a milk can is absolutely sterile there is no reason why it should not be left with the cover on. However, it is difficult to kill all bacteria in utensils and if any have escaped the sterilizing process they are likely to grow and multiply in the can, particularly if there is moisture in the can. Therefore, we recommend turning the

A Special Issue for Dairymen

WHILE it is true that the dairy industry has suffered less than any other branch of farming during the hard times, yet it is also true that milk production is increasing while consumption is falling off. Therefore, there is a special need to redouble efforts at this time to cut the costs of milk production, to improve the quality of milk products, and to increase consumption.

American Agriculturist has always taken the lead in helping to solve dairy as well as other farm problems. We have faith in the future of the dairy industry for the right kind of dairyman. But that there is a problem at the present time to be solved cannot be doubted and this number of American Agriculturist, as well as our regular issues, is our attempt to be of some special help to the dairy industry to meet the present situation. Much effort has been made to collect and boil down information for busy dairymen. We hope you will find time to read the whole issue.

Too Much Expensive Road Building

THERE is a story which is probably an old chestnut to most of you about a European on a visit to America where he traveled several thousand miles over various highways. On his return, he was asked about his American impressions.

"Well," he said, "they certainly build roads over there. A man by the name of Lincoln has a wonderful highway clear across the country; another fellow by the name of Roosevelt has built a great road; but that fellow Detour has built the most and they are the poorest roads I ever saw."

Well, Mr. Detour has certainly been busy this spring. It is almost impossible to travel anywhere without running into construction. When one rides about the country, he cannot help being critical of the whole road program. Here we are in the worst economic depression of a generation, with taxes constituting one of our worst burdens, and a time like this is chosen to spend millions of dollars of public money on the roads.

The excuse is given that all of this extra construction provides employment. So it does. But

where is the advantage of holding up business improvement by added taxation in order to provide employment? What is the use of "robbing Peter to pay Paul?" Then, too, we question whether all of this extra road money is fairly or efficiently spent. There are hundreds of miles of concrete highways costing fifty to sixty thousand dollars a mile to build where a road costing not more than ten thousand dollars would have served equally well. All of the extra money might have been saved to the taxpayers or spent in building gravel or hard narrow highways to replace the dirt roads.

Here are some conclusions about the whole program of road building. See if you do not agree. First, slow up spending money except where necessary for road building until times improve; second, build no more expensive roads for the next five years but put a reasonable amount of money into the secondary roads costing from five to ten thousand dollars per mile; third, let public officials, and this applies particularly to some local officials, play less politics in distributing road money and service.

Sweet Clover Pasture Increasing

WE have seen several dairies this spring in sweet clover pasture eating it and liking it, and, of course, showing the results of it in milk production. Five years ago a sweet clover pasture was almost a curiosity. When you know sweet clover is a legume and the large amount of stock you can keep on one acre, you understand why more and more dairymen are trying it out. We predict that five years from now there will be a great many thousand acres of sweet clover pasture.

Required for Dairy Success

THE other morning we were in a pasture with a friend looking at some beautiful Guernsey heifers which belong to him, and we made some remark about how familiar he seemed with the individual characteristics of each one of the heifers. "Well," he said, "why should I not know them? Take that one there, for example; I can close my eyes and recall her mother, her grandmother, and her great-grandmother. I ought to be pretty well acquainted with her!"

Then he went on to tell what an influence good stock had upon everybody who took care of them, increasing the desire to give them the best possible care. This friend is a natural cow man. He loves the business to the point of enthusiasm, and because he does he is never satisfied to have a poor individual around, with the result that his dairy activities are always successful.

We get a good many letters from young men asking our opinion about the future possibilities of farming. We answer that there is a future for a man with the right qualifications, one of the chief of which is that he must love the business.

Tax Budgets MUST Be Cut

"That farmers in this State are due for another excess tax burden is practically certain, unless they strike some form of concerted action. The state is already assuming more duties that could be attended to locally. The talk of these law-makers is that they can collect of the wealthy. But farmers should not be misled, for the wealthy merely pass it on to the farmer in the end. At present the Legislature is busy trying to find something to tax in order to finance old age pensions; up to date the question has not been answered. It is interesting to note that Federal and State taxes have almost doubled during the past fifteen years."

THE above interesting statement was taken from our notes from Massachusetts in the New England edition this time and is reprinted on this page because of its importance.

We have the old age pension law in New York. No doubt it is doing a lot of good and helping worthy people, but it is costing too much.

When the Legislature passed the bill in New

York, it was estimated that the maximum expenditure for the year for the old age pensions would be about a million dollars a month, half to be borne by the State and half by the city or county. A report from Albany now says that present indications are that this estimate is much too low.

The point being raised here is how much more of these increased taxes of various kinds are taxpayers going to stand for? Needed public work must go on, but the time has come for the people to insist that their public servants trim their budgets and their expenditures in the same way that private citizens have had to trim theirs.

To Reduce Milk Surplus

Dairymen should be urged to fat calves to relieve the surplus milk on our markets.—C.I.P.

OF course there is a limit to carrying out this advice, for if everybody fatted all of the calves, there would be no market for veal. But there is no danger of reaching this limit so the advice is good. This is the year of years for picking out the cow that is not a very good producer, fattening her, and selling her to the butcher, or better still, eating her on the farm. One group of neighbors that we know of agreed to a little plan whereby each is to fat and kill a cow some time during the year and divide the meat among the others. By this plan considerable surplus stock will be eliminated and everyone in the group will have fresh meat most of the time.

Judge Commended for Chicken Thief Sentence

"Glen Sours of Elmira pleaded guilty to burglary in the third degree before Judge Turk, Owego, Tioga County, New York, Monday, and was sentenced to from one to two years in Auburn prison. Sours was convicted for stealing chickens."

THE above is quoted from a local newspaper to emphasize the fact that here is one county judge who realizes that chicken thieving is just as much of a crime as any other form of burglary. If more chicken thieves got sentences of this kind there would be less poultry losses from this source.

The season is here again when losses from poultry thieving will run high. In order to help a little, American Agriculturist will print the name and commend publicly every judge and every officer responsible for capturing and convicting with heavy sentence any chicken thieves. We will also print the names of officers who do not do their duty in this respect. You can help by supplying names and particulars.

Eastman's Chestnut

AFEW days ago a friend and I were talking about it was too bad that most of the men well skilled in the old hand trades were disappearing from rural communities. The friend spoke of a local shoe cobbler whose trade had been handed down two or three generations, and who could make shoes that would out-wear any machine-made shoe that could be purchased. Another trade that is largely gone is the old fashioned blacksmith. Someone from Connecticut wrote me recently of a Yankee blacksmith, long on horseshoeing but short on book learning. This blacksmith had a sign posted up about which our friend writes as follows:

"I wanted a copy of that sign very much so I took a child's sled as an excuse and went to the blacksmith shop. While the sled was being repaired, I asked the blacksmith with some misgiving, if I might copy his sign. 'Why, sure,' he said, 'go ahead and copy. I cannot see why, but folks have been coming here to copy it, from all over, ever since I hung it up.' And here is what the sign said:

"Work did hear with litnin speed
Satisfackshun garanteed
Horshoin two is in my line
That will stand the ware and tare of time."

Dairy Facts, Figures, and Opinions

Neither Extreme Pessimism nor Extreme Optimism is Warranted

By E. R. EASTMAN

FOR several years the dairy industry has been in the happy position of having a constantly increasing demand for its products. This increase has been due not only to the growth in population but, through a better understanding of the food value of milk, there has been a greater per capita consumption. Now, however, in common with practically every other business, dairying has met with a setback, although it is still in a better position than most other lines of farming and city business.

However, there is no blinking the facts that now face the dairyman. The questions he naturally is asking are "What of the future? Are prices going lower? When are they coming back? What should I do to meet the situation?"

Now, of course, no one except a prophet, and I am no prophet, can tell what the future will bring forth, but there are a number of facts and figures available that should be of some help for the farmer to form his own conclusions. I have made some study of the situation, and I am intensely interested in seeing dairying as well as other farm prosperity maintained, so I am going to set down some facts, together with some of my own personal conclusions as accurately and in as interesting form as possible.

The Dairy Production Situation

Let us first consider the present dairy problem from where it starts—that is, on the farm. What is the production situation? Well, in the first place, we have more milk than we know what to do with. We have more than could have been well sold, even had consumption increased at the same rate as it has in past years. The production per day per dairy throughout the New York milk shed is at least ten pounds more than it was last year. Probably fifteen pounds is nearer the truth. Multiply this by all of the dairies in the milk shed and you will understand why we have such tremendous over-production.

Too Many Cows

One of the chief reasons for this is that we have too many cows. The number has been increasing steadily year after year for several years. Right now, for instance, we have in New York State about three per cent more dairy cows and producing heifers than we had last year at this time. There is in New York now a total of 1,424,000 where there were 1,383,000 a year ago. New York State is the second state in the Union in the number of cows, and there has been an increase in the number in every dairy state.

One bright factor in the situation is that there has been a decrease in the number of heifer calves being raised this year over last. This reduction is estimated to be about fourteen per cent. This will help three or four years from now, but unfortunately, it takes quite a long time to change trends in dairy production, because it takes a long time to raise a dairy cow. When you have too few cows, it requires time before the dairies can be built up, and conversely, when you have too many, their production cannot be quickly and automatically shut off.

Another smaller reason why there is large production is the better condition of the pastures. Pastures in the New York milk shed are in excellent shape. Recent rains have brought them along. If we get a hot, dry summer, the pastures will dry off, flies will be abundant, and milk production will be reduced, which will have its effect upon the market. The opposite will be the case, of course, if the season is favorable for pastures. Hot weather will also increase milk consumption.

What about the feeding situation? A glance at the little graph or chart on

this page will show you that the price of feed indicated by the dotted line has followed closely the price of milk, shown by the heavy black line, and that these feeds are reasonably low in price. This tends to reduce the dairyman's costs of production, but also helps, of course, to keep the general production high. R. L. Gillett, New York State Department of Agriculture Agricultural Statistician, reports that on May 1st, about 7.3 pounds of grain per cow, was being fed to the average milking herd.

Still another factor bearing upon the increasing milk production is the change that has taken place with the milk which formerly was manufactured but which during the past few years has been sold in fluid form. No farmer will sell his milk at manufacturer's prices when he can get fluid prices for

itself, but every health official and other social worker interested in the welfare of the race are boosting the health and food value of milk all of the time.

I repeat, after this temporary setback, per capita consumption of dairy products will continue to increase.

What about farm milk consumption? Let us face the situation frankly. There are many farm families using a lot of milk. Unfortunately, there are many more that are not. How consistent are we when we urge a city family to buy milk at fifteen cents a quart when we, as farmers, are not using all that we can at about three and a half cents a quart? What better way is there of keeping food expenses down than by increasing the family's use of milk, butter, and cheese? You say you are using all that you can. But are you? On our Household Page this time there

much effect in cutting down the use of oleo and increasing the consumption of butter. There is a Federal law passed this last year forbidding the use of color with oleo. A similar law was passed by the New York State Legislature and by several other states. Secretary Loomis of the National Dairy Union states that in round numbers there has been a decrease of eighty per cent in the manufacture of colored oleomargarine and forty per cent in the making of uncolored oleomargarine, largely due to this new anti-oleomargarine legislation. Some of this decrease in the use of oleo is already reflected in an increased butter demand. The butter market is already picking up a little.

Now you may say that farmers do not eat oleo, but I personally have found that many country groceries are selling more oleo than they are butter, and that the total sales run large over the year. These grocers tell me that much of this stuff is sold to farmers. I am sorry to report this but it seems to be the situation and, therefore, a good subject for discussion in your dairy organization and grange meetings. If we have any faith in this business of farming, certainly let us cut out the use of oleomargarine in our own farm families.

Suggestions That May Help

What are the remedies for the present dairy troubles? Well, one of them is Old Man Time himself. As suggested above, dairying is a long-time business. It takes time to grow a cow and bring her into production. It takes time to cut down production when there is too much. Good dairy prices result in more cows and too much milk, which in turn results in lower prices. Then farmers quit raising calves as they are now and fewer calves mean less milk and in time better milk prices. That is the way it goes, so after a while we will have fewer cows and better milk prices. Employment will increase in the cities, which will be followed by increased dairy demand.

One remedy is more advertising of dairy products by dairy organizations and by milk dealers. So far most of the milk advertising has been left to the health people. Milk has the greatest possibilities for advertising of any product in the world and gets the least. There ought to be a deduction from every milk check for a large and consistent setting-forth of the good facts about milk to the general public. Milk bars should be a prominent feature of every fair and picnic.

I have already suggested in this little article, the necessity of practicing what we preach on the farm, by using more milk, butter, and cheese in every possible way in our own families. An-

(Continued on Page 9)

it. The result of this has been more and more milk on the markets in fluid form. While this is not an actual increase, of course, in milk production, yet it amounts to it, and in practice has a marked influence on fluid milk prices.

Cow Prices Are Too High

While we are discussing production conditions, mention should certainly be made of cow prices. I call your attention to the other chart on this page. You will note that good cows could be bought for about \$65 in 1914. Prices went to about \$110 in 1918 and dropped back to approximately \$70 in 1922. Then in 1928 they went to above \$125. We said repeatedly while these high prices prevailed that they were too high and that dairymen who invested in too many such high-priced cows were headed for trouble. There are mighty few cows that are worth at the pail the prices that were paid for them during the past few years. Cow prices are now coming down, but they are not down far enough. Cow prices are still too high at the present milk prices or at those that are likely to prevail for the next few years. Keep this in mind and be a bear on the market when you buy cows. You will not only help yourself but the whole dairy situation.

Demand Decline Is Temporary

The matter which gives the dairy industry the greatest concern is the falling off of milk consumption. The daily average receipts of the New York milk market during the month of March of this year were equivalent to 141,074 cans of plain milk. This compares with the daily average for March of last year of 148,331 cans of plain milk, or a decline in consumption of this year over last of approximately five per cent.

This decline in demand is, of course, discouraging. Fortunately, however, it cannot possibly be more than temporary. As soon as employment conditions right themselves in the cities, milk consumption is sure to come back. People cannot over a long period of time get along without milk and other dairy products. Not only do these products have the backing of the dairy industry

is a fine lot of tested recipes prepared especially by our Household Editor, Mrs. Hockett. Your own recipe book contains many other suggestions for you. Write to your Home Bureau agent or to the State College of Agriculture for ways of using milk and its products, and then if you cannot increase the supply of milk to your family in palatable form, there is just something the matter with the cook! Every quart, of course, that you take off the market helps the price situation just that much. If all dairymen of the New York milk shed, or even a large part of them, would use a quart more per day per family, than they are using now, it would have a very appreciable effect upon the surplus situation.

Oleo Is On the Toboggan Slide

While we are talking about milk consumption on the farm, let us bring up that old bugaboo, the use of oleo. Thanks to the splendid work of farm organizations backed by the farm papers of the country, we have some new oleo legislation that is having

the ODDS are against you with a POOR FEED

No one is foolish enough to deny that milk prices are down—that dairy profits have shrunk—that it is a time to practice economy in the strictest sense.

But there is another fact to face—another truth to realize; *the odds are against the dairyman who cheapens his ration.* He invites every danger he avoids when times are good. He turns right about face on good dairy practice. He deafens himself to the truth that, now, only good cows and a good feed can make him a profit.

Run down condition, ill health, constipation—low profits—all are waiting to respond to the invitation cheap feeding gives.

The best way to get rid of surplus milk is to send low producing cows to the butcher. Keep only high producers—feed them well. That's true economy! That's profitable dairying!

Regardless of milk price Larro dairy feed will return a greater profit over feed cost. Larro plays square with your cows because it is always the same—always uniform. *It always is the most profitable.* See your Larro Dealer.

What Can the Dairyman Expect ?

(Continued from Page 1)

I have seen enough to convince me, at least, that plenty of men are prospering even in these hard times by milking cows. They are not becoming millionaires, but they are living "Godly righteous and sober lives"; and while they work hard and constantly, they have many comforts and some few luxuries, and are sending to high school and college a new generation on which the country will largely depend. Their scale of living will compare very favorably with the great mass of retail tradesmen in towns and cities and with the great mass of skilled artisans even in these times of Union wage scales. I trust not to be thought irreverent if I paraphrase "I have been young; I am now old; yet I have never seen the intelligent dairyman forsaken or his seed begging bread."

I would not ignore the other side. There are mortgaged farms, there are run down buildings, there are illbred and illfed herds, there are unpaid bills at feed mill and grocery store; and some of these would be relieved if times in general were better and prosperity on a higher level. But after all, one cannot escape the conclusion that it is the personal equation that is the determining factor in the great majority of cases.

I want to describe a single farm as a concrete illustration. Among others I call to mind a dairy farm that I have known intimately during my whole life. There are something more than one hundred acres and at first general farming was carried on, but now for more than forty years, little more has been sold than what came from the cows. The present owner received it by inheritance, and a similar inheritance of the wife's served to buy out the interests of the other heirs. Aside from this the owner had but little more than his own thrift and industry. At first progress was slow, but a silo was soon built. One of the first in the neighborhood. In the "nineties" a cream separator replaced the old "Cooley Creamer" and the cream went to a cooperative creamery. Alfalfa came after a time and various labor saving machines as needed in home and outdoors. A telephone, two automobiles, and a radio are added to the list and the last time I saw the place electric lights were being installed in house and stables.

Four children have grown to maturity. All had high school educations or better. One daughter, a college graduate, is a professional bacteriologist in government service. Another daughter took nurse's training and is a very capable hospital manager. The third daughter perhaps did the best of all by marrying a good man abundantly able by his industry to provide for her and her family and they are on the road to prosperity. The son followed his father's footsteps and is well able to take his place.

All of this has come from the farm and largely from the cows on the farm.

There has never been an over supply of what the darkies call "cash money", but there has always been enough to eat and to wear, a comfortable house to live in, and an abundance of everything essential to a comfortable life. The owner enjoys the respect and confidence of his neighbors and has served his community in various useful capacities. He would be called "just an ordinary dirt farmer." I call him a successful dairyman and thousands of readers of the Agriculturist can duplicate similar cases from their own experiences or those of their neighbors. An industry that produces such results cannot be called decadent or in danger of extinction.

But what of the future? A rational system of husbandry for the northeastern United States, except for a few localities given to fruit growing or other special crops, will include live stock as a major project. The evolution of farming practice during the last one hundred and fifty years has resulted in the fact that this live stock in vastly preponderating numbers is the dairy cow; and without attempting to quote figures or give reasons it seems reasonable to suppose that these conditions will continue. In other words as one of our Professors has said "dairying is inevitable."

I believe the young man now establishing himself will do well to study the capacity and adaptability of his farm and arrange his program accordingly rather than to attempt to adjust his production to more or less fluctuating market conditions. A productive profitable dairy herd is a rather permanent thing, and once having been built up, the intelligent owner will not lightly sacrifice it merely because a "surplus" occurs. Not so long ago we witnessed an extensive campaign of propaganda urging increased production because of an impending shortage; with the result that within a few months cheese factories were being rapidly established in the middle of the winter to take care of the surplus, the result being more or less injurious to the industry as a whole.

This does not mean that there should be no flexibility in practice. The intelligent dairyman, and I have used the term frequently and advisedly once having determined that his farm is best adapted to dairy production as a main project, will hold himself quite rigidly to a herd of a certain size, but from time to time as conditions indicate he may add to or slack off slightly, keeping more hens or adding a few sheep or cultivating a little more land and raising some beans or potatoes or what not, but always holding on to his well bred and well kept dairy herd as the main chance.

I said at the beginning that I would not prophesy, but such a man can look the future in the face with confidence and will be little concerned with unemployment, depressions, shortages or surpluses.

"No, I haven't any Japanese beetles, and I wouldn't give you one if I had!"—JUDGE.

WHEN YOU COME TO THINK
of it, are there any farmers in the United States better off
to-day than those who are selling their milk through the
Dairymen's League Cooperative Association, Inc., and
who are buying their farm supplies through the G.L.F.?

Furthermore, when it comes to facing the future—
are there any farmers who stand a better chance of meet-
ing conditions, *good or bad*, than those who own and use
these two great service organizations? They are organ-
ized, financed, equipped, manned, and above all, ex-
perienced. They are ready to be used to get results. Isn't
this the time to give them your 100% support?

There are 200 practical applications of electricity to farming. Consult your electric power company or electrical dealer—find out what labor savers will bring you the greatest immediate profit

GIVE ELECTRICITY A CHANCE Install G-E Wiring System

Electric motors and other electric equipment are severely handicapped when operated on an inadequate wiring system. They have no better opportunity to do their best work than has an underfed horse.

The first thing to be sure of is that the wiring in the buildings and yard is adequate. Your wiring should be planned and installed with sufficient capacity and numerous outlets to meet reasonable future needs. It is less expensive to do this than to alter the wiring later in order to accommodate new electric equipment.

The simple, easy, economical way to be sure of all these advantages is to specify the G-E Wiring System. It is designed by experts to meet any electrical requirements. The G-E Wiring System employs only the

best materials. It affords safety; it provides enough switches and outlets all conveniently located—wires heavy enough to do their job. It is the real answer to the wiring problem.

A progressive farmer says, "In looking back I can see that I was very fortunate in having a good job of wiring done in the house and barns. At first we used electricity only for light and for cooking. Now we use it for thirty-three different purposes and with almost no changes in the wiring."

DAIRYMAN

The Outlook for Purebred Cattle

WE know of no one who comes in closer touch with the purebred situation than the secretaries of the various purebred associations. We asked them, for our special dairy issue, to give us briefly their idea as to what is ahead for the man who keeps purebreds. Here are their replies:

Guernseys

There is little doubt as to the outlook for breeders of purebred cattle in the United States. My special interest, of course, is with dairy cattle.

The development of purebred dairy cattle came about to meet the economic demand for more average production and to enable the practical dairyman to purchase sires with some degree of assurance that his future herd would be as good or better than the one he was working with.

The industry now finds itself in the embarrassing circumstance of subnormal consumption of dairy products, the highest average production per cow in the history of our country, the largest number of milking cows in the history of our industry together with the largest number of beef cows being milked in the history of the industry and added to this embarrassing situation is the fact that we have never had as many promising two year olds coming into production as at the present time. Consequently, prices for dairy products have met with very marked reduction. So we are met with identical conditions which brought about the breeding of cattle. In other words, there is a demand for a more efficient dairy cow. This represents the primary demand for purebred dairy cattle. Inasmuch as the primary demand is greater today than at any former period of dairying, dairymen breeding purebred dairy cattle should look to the future with eagerness and confidence.—**KARL MUSSER**, Secretary, the American Guernsey Cattle Club.

Jerseys

Agriculture of this country is the broad foundation upon which all of our present civilization and future development depends. Dairying is the key-note of agriculture. High producing animals are essential for economic dairy production. It is universally recognized that high production comes almost entirely through the use of purebred sires with the ability to transmit high production to their offspring.

This being true, the dairyman who is a breeder of purebred cattle today, and who has given attention to culling out his poor individuals, giving the remainder of his herd proper management, is indeed in an enviable position.

The selling of farm forage and grain crops through the dairy cow is, at present, one of the most profitable markets. If this be true under present conditions, it will be more true when we have an advance in the price of milk and butterfat.

That there will be an increased demand for outstanding purebred dairy cattle in the future at profitable prices, there can be no doubt. In the meantime, that individual who has culled severely and through breeding has kept his herd up to a high standard of production and conformation, will be in a position to reap the rewards when conditions improve, as they are bound to do.—**L. W. MORLEY**, Secretary, The American Jersey Cattle Club.

Ayrshires

Although the market for dairy cattle and dairy products has severely declined, there has been a tendency for farmer-breeders in the East to invest in well-bred young cattle, and as a result, there has been a steadying influence on our trade.

During the past few months, there has been a very satisfactory demand for heifer calves at prices which have made them sound investments, and at

**Post Your Farm

American Agriculturist

Write the

Service Bureau of

461 Fourth Ave., New York City

the same time, profitable for the producers. Perhaps the best indication of the dairy cattle situation, insofar as the Ayrshire breed is concerned, is found in the excellent trade in choice young sires. Leading breeders report healthy trade with very few serviceable sires in their barns.

All of these factors indicate that there is a tendency to replace non-descript cattle with purebreds and to improve the purebred herds which are now established.—C. T. CONKLIN, Secretary, Ayrshire Breeders Association.

Holsteins

Mr. Houghton Seaverns, secretary of the Holstein-Friesian Association of America, suggested that we ask Professor H. H. Wing to give the outlook for Holsteins. We had already asked Professor Wing for his opinion of the general outlook, which you will find on page 1 of this issue. If you will read this, we are sure you will have no question as to what Professor Wing thinks about the outlook for purebred Holsteins.

Dairy Facts, Figures, and Opinions

(Continued from Page 5)

other old remedy but one which is ever new is to eliminate the poor cows. There are from one to six in every dairy. The quicker she goes for beef, the better, and of course the situation is not helped any by selling a poor cow to a neighbor. See that she goes out of production.

Another remedy is organization. Had there been no organization in this milk shed during the present depression, dairymen would have received less than a dollar a hundred for their milk. How do I know? Because that is what they always did receive in times of trouble in the old days before organization, and dollar milk or less is what other dairymen in other parts of the country where they are unorganized are receiving now.

Good Feed for Good Cows

Another suggestion is to take good care of the good cows. Get rid of the poor ones, yes, but feed and care for those that are left just as well as ever. Why? Because feed is reasonable in price and especially because dairying is going to come back. When it does, you will want some good foundation cows all ready to go.

And last but not least, as a help for the present situation, keep cheerful. A fool optimist is as bad as a fool pessimist. Somewhere between is the normal, reasonable, happy man. Dairying has proved itself the best branch of agriculture.

Practically all of you who read this have always had enough to eat and wear and a decent place in which to live and to rear your children. If you stick to the dairy business and use ordinary business judgment and industry, you will never get rich but you will always eat, and that is more than can be said for thousands of other jobs at the present time.

Secret Service

YELLOWSTONE PARK is such a paradise for fishermen, that occasionally one of its hundred streams has to be closed for restocking from the Government Fish Hatchery at Yellowstone Lake. A

Ranger came upon a visitor who had been fishing for two hours, without a nibble, in one of these closed streams.

"Can't you read the signs?" he demanded. "No fishing allowed here."

"Yes," replied the disgruntled angler, "but who told the fish?"

Low prices for the products from the farm can be offset in part by a good supply of home grown fruit and vegetables.

At no time has the poor cow been so great a luxury as today.

Efficiency for the Dairy

TURN the tiresome, tedious job of hand milking over to the new **McCormick-Deering Milker** to get the greatest possible quantity of clean milk from your herd at the lowest possible cost.

In every way, the new McCormick-Deering is a machine built for efficiency and lasting service. The patented pump . . . the fully-enclosed, no-oil, no-spring pulsator . . . the sanitary, two-piece teat cup assembly . . . the anti-freeze stall cocks . . . the sanitary, one-piece pail cover, and the many other features—all contribute to make the McCormick-Deering the best to be had in a practical milking machine.

For maximum butter-fat from your milk, with minimum time and effort spent separating, use the famous **McCormick-Deering Ball-Bearing Cream Separator**. It skims closer than any other separator on the market due to a scientifically-designed bowl with an adjustable skimmilk discharge.

You can see the new McCormick-Deering Milker and the Cream Separator at the McCormick-Deering dealer's store near you. For a folder describing both of these modern dairying aids, write to

NAME _____
ADDRESS _____ STATE _____

With the A. A. Poultry Farmer

Paralysis May Be Hereditary

IN a recent talk about disease to a group of poultrymen, Dr. Beaudette of the New Jersey State College of Agriculture, called attention to several conditions that poultrymen need to consider. Dr. Beaudette emphasizes the fact that disease is never spontaneous; that is, it does not just happen, but comes from a definite cause. Infectious or contagious diseases are spread by traffic in live birds, by traffic in baby chicks, by exhibiting birds at poultry shows, by sending them to egg laying contests, through intermediate hosts; that is, some animal that acts as a host to a parasite that later attacks chickens, through used feed bags, and by people who travel from one poultry farm to another.

Let's Use the Facts We Have

In discussing bacillary white diarrhea now commonly referred to as pullorum disease, the speaker stated that we now have sufficient information on this disease to control it if we will merely put into practice what we already know. That is, by the use of a blood test, breeders that have this disease can be located and eradicated from the breeding pen. Fowl pox can also be controlled by proper vaccination.

In New Jersey this year there is to be a vaccination demonstration in each county by a veterinarian. Poultrymen who wish to do their own vaccinating will be given printed instructions, a list of approved laboratories where they can buy their vaccine, and a permit from the State Department allowing them to do this work.

Dr. Beaudette believes that there is definite relation between feeding and certain diseases. He says that a careful check has convinced him that certain types of diseases, for example, so-called heart disease and "crazy chicks" disease, develop when certain rations are fed to the chicks. Chicks with this disease have been cured at the College by supplying a complete ration containing all the things that chicks should have for proper development.

Perhaps the most interesting observation made, which by the way, is contrary to a quite commonly accepted idea, is that the condition sometimes spoken of as chronic coccidiosis and characterized by paralysis has no proved relation to coccidiosis of chicks but may be an entirely different disease. "The fact," said Dr. Beaudette, "that pullets that become paralyzed may have had coccidiosis does not prove that coccidiosis is the cause of the paralysis."

A Suggested Plan

Dr. Beaudette's explanation is that the condition that we call chronic coccidiosis, which is almost always accompanied by paralysis, is a specific disease and that it is hereditary. The speaker believes that in time flocks will be certified to be free from paralysis

just as some flocks are now certified to be free from white diarrhea. This will be a harder task because as yet there is no definite test which can be applied to determine whether or not the birds are subject to paralysis. However, some breeders who keep pedigrees of their birds have definitely observed that paralysis runs in certain families and is entirely absent in other families.

It is important that poultrymen should recognize all possible ways of spreading infectious and contagious diseases, that they guard against introducing disease into their flocks, and that they get the best available information as to ways of treating diseases when they do find it in their flocks. In this connection, Dr. Beaudette points out that certain birds are carriers of disease; that is, they may actually have infection in their bodies without themselves giving any evidence of it. It is, of course, useless to isolate such birds when they are purchased to be added to the flock. They may be isolated for a month or six weeks and show no symptoms of disease, yet when they are added to the flock they pass on the trouble to the birds that are more susceptible.

We have more poultry diseases than we once had and probably new ones will develop from time to time. In some sections it is one of the big problems which the poultry breeder has to contend with. Poultrymen need all the available facts about diseases in order to prevent serious losses.

Keep Eggs Cool

Does the temperature at which infertile eggs are kept make any difference in their quality?

EGGS produced in a flock where there are no males will be sterile, but this does not mean that their quality will not deteriorate in a warm atmosphere. The changes that will result are chiefly rapid evaporation that causes the yolk to become dark and the white to become watery, while the inner shell membrane becomes dark around the air cell. All eggs for market, fertile or infertile should be kept at a temperature of between 40 and 60 degrees Fahrenheit.

Coccidiosis Again

My chicks are about four weeks old. Some of them are listless and dopey and their feathers are rough. Droppings are bloody. Chicks appear all right in the morning and may be dead the next morning. What is the trouble, and what should we do?

FROM your description, I would say that your chicks were troubled with coccidiosis, which is an extremely common and discouraging disease. The sources of infection are from the soil and from mature birds. The latter may harbor the disease without showing any external symptoms. The organism causing the trouble may live in the soil for a considerable length of time before picked up and infecting the young chicken.

The remedy is to keep the intestines partly emptied of food, rather than distended, and to have the contents somewhat acid. Some recommend the feeding of sour milk and the discontinuance of the mash feeding if the attack is severe. Burn all chicks that die of the disease and isolate all those who show any symptoms of it. Move the houses containing the remainder of the flock to new ground if possible, and clean and disinfect the houses every four or five days as long as the disease is noticeable. In any event, plow or spade the old ground and lime and sow a crop.

Keep the chickens away from this ground for at least a year. The best cure is prevention and the practice of

Cow Prices in the New York Milk Shed

(Continued from Page 3)

50c per hundred and eggs are 1c apiece. I was at an auction on May 23, and cows sold for about half what they would bring a year ago. Young fall milkers sold for \$65. Cull and canners are selling from 1c to 2c per pound. Purebred heifer calves are in good demand and are selling from \$10 to \$50, depending on dam's record and individual type.—**JOHN A. CHILD**, *Malone*.

Purebreds that are fresh or near fresh sell for \$100 to \$175. Dry purebred cows are bringing about \$20 to \$30 less, depending on time of freshening. New milch grades are bringing from \$75 to \$125 and dry grades, \$50 to \$90.—**C. W. RADWAY**, *County Farm Bureau Agent*.

Delaware County

Cattle dealers report that good young TB tested grade cows coming fresh are bringing from \$70 to \$110. The same animals not tested bring \$60 to \$85. Unless purebreds have production records they are not selling much better.—**C. S. DENTON**, *County Farm Bureau Agent*.

Chenango County

Good purebreds bring \$150 up. Good grades sell for around \$100 up. Poor cows and dry cows are selling for considerably less.—**K. D. SCOTT**, *County Farm Bureau Agent*.

Oneida County

Fresh grade cows are selling for \$100 and fresh purebred cows for about \$150. Dry cows bring about \$40 to \$100 for grades and \$100 to \$125 for purebreds. Not many are being sold.—**G. W. BUSH**, *County Farm Bureau Agent*.

Lewis County

First class tested grade cows are bringing around \$100; tested purebreds from \$125 to \$150.—**J. C. OTIS**, *County Farm Bureau Agent*.

Chautauqua County

Purebred cattle prices range from \$125 for fresh cows to around \$100 for those that are dry. Grades are bringing somewhat less, averaging about \$65 for dry cows and \$85 for those that are fresh.—**C. K. BULLOCK**, *County Farm Bureau Agent*.

Allegany County

Good grade cows are bringing from \$75 up. Purebreds are selling for from \$25 to \$50 more than grades.—**E. C. FOSTER**, *County Farm Bureau Agent*.

As the season of high egg production approaches particular attention should be given to the supply of minerals. Egg shells are largely lime.

"Leggo of me! I know a mirage when I see it."—**LIFE**.

KERR Chicks Win Prizes

R. I. Reds, first at Liberty and first sweepstakes at Batavia, N. Y. Chick Shows. White Leghorns, second at Batavia. Barred Rocks, third at Liberty —**AGAINST ALL COMERS**. Rich laying inheritance. They'll be strong laying pullets in early fall.

Reviewing the Latest Eastern Markets

Milk Prices

June Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk (Metropolitan area)	2.90	2.70
2 Fluid Cream		
2A Fluid Cream	1.66	
2B Cond. Milk		
Soft Cheese	1.91	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.30	1.10
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for June 1930 was \$3.00 for 3.5% milk and Sheffield's \$2.80 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Retail Prices

Butter Holds Steady

CREAMERY SALTED	June 6, 1931	May 29, 1931	June 7, 1930
Higher than extra	24	24 1/2	24 1/2-34
Extra (92 sc.)	23 1/2	23 1/2	33
84-91 score	19 1/2-23 1/4	20	23 1/4-27 1/2-32 1/2
Lower Grades	16	19	17-19 1/2-26 1/2-27

We have had fewer fluctuations during the first week in June than for some time past. Liberal supplies arriving during the Memorial holiday were responsible for a quarter cent drop in the market on June 1. In spite of that, there was a general feeling of confidence and trade moved along in a satisfactory manner. At that time Chicago quotations were above a parity with New York City and helped to maintain a firm market in New York City. On Tuesday, June 2, the market held firm with Chicago and New York maintaining an unchanged differential although this factor seemed to have little influence on the New York trade. Ample supplies of butter have been arriving in New York City to take care of all trade needs. Operators in general are following a very conservative policy and there seems to be no disposition to disturb values. Both buyers and sellers appear to be willing to operate on the basis of 23 1/2c for creamery extras. Wednesday found the market with a little less snap. This loss in tone was attributed to a decline at Chicago which reduced the differential between the two markets. Thursday's market was fairly well established, while Chicago continued to drop a point closer in line with New York City prices. Buying for current use held up well and there was good speculative activity. Friday experienced a noticeable loss of tone, although receivers were unwilling to reduce prices there was an unmistakable pressure to sell and the market was in the buyer's favor. This was the situation at the close on June 6 although prices have not been changed.

The movement of butter into retail channels continues at a high rate. The call for current use has been very satisfactory, and this, with a good speculative market has kept stock moving, the volume being consumed running considerably ahead of the same time a year ago. The consumption of lower grade butter has also broadened, following a swing to this class of stock by former users of oleo.

The larger volume of butter being used for current consumption and the caution on the part of most speculators has resulted in a more restricted movement into the freezers. On June 5 the ten cities making daily reports had on hand 23,144,000 pounds of butter compared with holdings on the same day a year ago totaling 31,847,000 pounds. From May 29 to June 5 holdings increased in the ten cities a total of 5,959,000 pounds whereas during the same period last year holdings increased 6,196,000 pounds. In spite of the strong statistical condition of the market speculators are extremely conservative. It is very apparent that the stock market and the financial situation hold a strong influence. Furthermore, operators are very cautious about advancing prices, realizing that it would be very easy to stagnate the movement into consuming channels by increasing retail prices. Not until business and employment revives will there be much opportunity to force the retail end.

Stronger Tone in Cheese Market

STATE FLATS	June 6, 1931	May 29, 1931	June 7, 1930
Fresh Fancy	12-14	12-14	17 1/2-18 1/2
Fresh Average			
Held Fancy	21-23	21-23	24-26
Held Average			23

The cheese market has shown more life during the week ending June 6 than for some time past. There has been more speculative interest in full grass fresh cheese both in Wisconsin and in New York State, than we have been able to report for some time. Advices state that Western-made cheese is being held for more money and the finer makes of full grass New York State flats are not being offered so freely. There is still some New

York State cheese of the so-called fodder make available at 12c to 12 1/2c. However, the bulk of the offerings are at 13 1/2c to 14c.

The market on held cheese continued to hold a firm position.

On June 4 the ten cities making daily reports had in storage 9,836,000 pounds, compared with holdings on the same day a year ago totaling 12,066,000 pounds. From May 28 to June 4 holdings in the ten cities were REDUCED 109,000 pounds whereas during the same period last year holdings INCREASED 228,000 pounds.

Henery	21 1/2-25	23-25	27-31
Gathered	18-21	18-22	24-26

Nearby egg prices held fairly steady during the first week in June in spite of a generally unsatisfactory egg market. Heavy supplies piled up over the Memorial weekend holiday and left the egg market as a whole in pretty bad shape. The heavy posted receipts caused a sharp decline on Monday. Tuesday's market was no better. The abundance of eggs killed the confidence of speculators and caused a conservative feeling among chain store buyers and jobbers. On Wednesday, the accumulation appeared to clear away to some extent and the market turned steadier. This improved condition appeared to gain impetus with each succeeding day and the market comes to a close in a relatively better condition. The heavy receipts that we have been getting clearly demonstrate that production has not been shrinking as much as we have been led to believe by earlier reports.

Nearbys did not suffer in price, western mixed colors taking all of the grief. Nearby eggs did not have things all their own way however. Stocks have moved slowly and there were days when goods threatened to pile up. Toward the latter part of the week supplies were falling off more rapidly but at that, there was no threatened shortage.

Present prices indicate that later in the summer and in the fall, eggs will be available to consumers at prices under those charged a year ago. This means that fresh eggs this fall will once again have to buck cheap storage eggs.

On June 5, the ten cities making daily reports had in storage 4,595,000 cases of eggs, compared with holdings on the same day a year ago totaling 4,927,000 cases. From May 29 to June 5 holdings in the ten cities increased 282,000 cases whereas during the same period last year the same cities reported an increase of holdings totaling 266,000 cases.

Broilers Bring More Money

FOWLS	June 6, 1931	May 29, 1931	June 7, 1930
Colored	23-24	25-26	24-26
Leghorn	20-21	23-24	20-21

Colored			
Leghorn			
BROILERS	June 6, 1931	May 29, 1931	June 7, 1930
Colored	24-37	22-35	25-42
Leghorn	20-30	20-26	16-30
Old Roosters	-13	-13	13-14
CAPONS	June 6, 1931	May 29, 1931	June 7, 1930
TURKEYS	15-30	15-30	20-25
DUCKS, Nearby	15-24	18-24	18-23
GEES	-12	-12	12-14

The broiler market experienced very satisfactory trade during the first week in June. Receipts were lighter than they were previous to the Decoration Day holiday and the weather has been very favorable. Rocks were in excellent demand up to Friday and were short of supplies. Reds and Leghorns have been in the sellers' favor as well. Just before the close of the market, Reds and Leghorns were clearing readily but Rocks were top heavy and many were offering concessions rather freely.

The fowl market has not done so well. While broilers increased over the closing prices of a week ago, fowl prices have dropped. For one thing the warm weather we experienced during the first week in June, dampened the enthusiasm and had a depressing effect on the consumption of fowls. In many cases broilers were used to help the fowl market.

Shippers of broilers who are planning to hit the Independence Day trade might well bear in mind the Memorial Day experience. Good birds sold well. Accordingly, give your birds a little fitting and grade them in the crates.

In the Produce Market

With the coming of June local produce is becoming more prominent on the New York market. New Jersey berries are in full swing. The auction markets at Cedar-

ville and Rosenhayn reported increasing volume from day to day. Demand for good quality berries has been active and some sales at the auctions reached \$6.25 to \$6.50 per crate with an occasional sale higher. The liberal supply of berries has made the buyers critical. Low quality stock has received no attention.

Asparagus continues to move fairly well, although prices appear to be trending downward.

Nearby beets are coming in but are not meeting much demand.

Lettuce (Big Boston) from Orange County and New Jersey is bringing from 30c to 65c per crate. Iceberg from New Jersey is bringing up to 75c per crate of two dozen heads.

Other vegetables are arriving in increasing volume. New Jersey peas are bringing from \$1.50 to \$2 per hamper. Orange County celery is beginning to roll in bringing \$1 to \$1.15 per bunch of one dozen stalks. This is frame stock. The Jersey and State market is just about to open.

Meats and Livestock

CATTLE—Steers active, strong to 50c higher, generally 25c up. Three loads good 1452 lb. corn-belt fed steers \$8.00. Two loads medium and good 1200-1252 lb. Pennsylvania fed steers \$7.25. Cows scarce, steady, common and medium \$3.00-4.00; low cutters and cutters \$1.50-2.50.

VEALERS—Scarce, steady; good to choice \$8.50-10.00; medium \$6.50-8.00; cull and common \$4.50-6.00.

LAMBS AND SHEEP—Lambs in fairly liberal week-end supply, demand poor, trading slow, most sales 50-75c lower; good to choice \$9.00-10.00; medium \$7.50-8.50; common \$6.00-7.00. Ewes steady; medium to good \$2.00-2.50.

COUNTRY DRESSED CALVES—Receipts were light to moderate during the week. Trading was slow all through. Small calves were light in supply and obtained almost as much as heavy weights which were too plentiful. Market closed weak and irregular on tops, steady on small. Fresh receipts per pound: Choice 11-12c; fair to good 10-11c; small to medium 9-10c.

LIVE RABBITS—Receipts light to moderate during the week. Demand slow, large stock accumulating. Market closed weak at 10-15c per pound.

43% C. S. Meal		31.00	45.00
34% O. P. Linseed Meal		29.50	44.00

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Buffalo quotations did not arrive in time for this report. In general the market was lower on practically all materials, marking the low level for the year.

Slow Demand for Hay

The demand for hay during the first week in June was slow and far under the supplies that rolled in. As a result prices declined and the market closed barely steady. Straight timothy brought \$19 to \$25 per ton, while clover mixtures were worth \$19 to \$23. Grass mixtures generally ranged from \$17 to \$22, with low grade hay moving very, very slowly. Sample hay sold at \$13 to \$18, rye straw still brings \$19 to \$23 with oat straw at \$13 and wheat at \$12.

The new celery bulletin just issued by the Cornell University agricultural experiment station summarizes the results of 81 New York state celery growers. It makes as recommendations the practices found profitable in the muck soils investigations for both close-culture and wide-spaced growing. Ask the office of publication at the New York state college of agriculture for P-517. It is free.

Farm News from New York

Jersey and Holstein Breeders Hold Annual Meetings --- County Notes

AT the sixty-third annual meeting of the American Jersey Cattle Club, New York City on June 3, George W. Sisson, Jr. of Potsdam, New York, was elected president to succeed Samuel F. Crabbe of North Dakota, who has just completed his second term. Five directors were elected. Jack Shelton, manager of the Luling Foundation Farm of Luling, Texas, was elected director to take the place of J. W. Ridgway. J. D. Madding of Bridgeport, Ill. takes the place of Tom Dempsey. Edward Cornish of Cold Spring, New York, takes the place of George W. Sisson, Jr., and Professor C. G. Staples, head of the dairy department of the Univer-

George W. Sisson, Jr. of Potsdam, New York, the newly elected president of the American Jersey Cattle Club. He succeeds Samuel F. Crabbe of North Dakota.

sity of Louisiana, takes the place of A. H. Henderson. Samuel F. Crabbe of Fargo, North Dakota, was elected to fill the unexpired term of the late J. J. Grathwol.

Dr. H. E. Van Norman, head of the research and public relations department of the Borden Company, gave an interesting talk to the members. He made two constructive suggestions which were favorably received. First, he proposes that the club inaugurate a list of prospective proven sires. Any breeder could register the name of a young bull with the Club, announcing his intention to attempt to make him a proven sire. Then any breeder who is interested in getting the names of the owners of such animals could communicate with the Club. In his other suggestion, he proposed that some recognition be given to all mature cows shown at the National Dairy Show that combine both type with high production. He suggested a board of judges, possibly seven prominent breeders, who, when the aged cow class was judged at the Show, would designate such of them as in their opinion merited such recognition. Then some sort of a trophy could be awarded to the owners of these animals.

Mr. Sisson, newly elected president, presented to Carl J. Tucker, Penwood Farm, Mt. Kisco, the coveted president's cup which is given to animals that meet certain high standards. The cup was first presented in 1921 but several times no animals have had sufficient high production to win the cup. Mr. Tucker's cow, Imported Can-calaise, produced 1,072.37 pounds of butterfat and 18,822 pounds of milk in 365 days in class AA.

Secretary Morley gave some interesting figures in his annual report. During the year ending March 31, 1931, a total of 55,718 animals were registered and 33,703 were transferred. Registrations in New York State were 2,033 and transfers 1,282.

During the year, bulls belonging to the following New York State breeders were awarded gold medals:

John T. Rowland, Jr., Spring Valley, New York; George W. Sisson, Jr., Potsdam, New York.

Bulls belonging to the following New

York State breeders qualified for silver medals: Lime Ridge Farm, Poughquag; Cornell University, Ithaca, New York.

Herds belonging to the following New York State owners completed a year's work in the herd test: Eugene M. Casey, Binghamton; Jacob Heer, Marcellus; New York Agricultural Experiment Station, Geneva, New York; Clayton Thomas, Glens Falls, New York.

Holstein Association to Continue Extension Work

AT the Holstein Friesian Association of America's annual meeting held in Syracuse, Monday to Wednesday, June 1 to 3, Dr. L. M. Thompson of Montrose, Pennsylvania, was elected president to succeed Professor H. H. Wing of Cornell University. Frank S. Walker of Orange, Virginia, was re-elected vice president.

Speakers at the meeting included men prominent in Holstein work. One of the important decisions made was the continuance in the extension service rendered by the Association to its members at the present level of efficiency, despite the depression period. The majority of delegates passed this resolution with the idea that it would aid in rebuilding and reconstructing the dairy industry and "maintain its standards and policies" to the betterment of the industry as a whole.

A feature of the meeting was the annual two day sale of cattle which opened on Thursday and continued through Friday.

Madison, Wisconsin, home office of the Association was selected as the meeting place of the convention next year.

Sullivan County Herd Makes Fine Record

MILTON MAURER of Callicoon, Sullivan County, N. Y., has a dairy herd consisting of 17 Holsteins that have made a very favorable record. During the past year the best cow in the herd produced 16,012 pounds of milk, while the average for the entire seventeen was 10,894 pounds. The highest butterfat production was 502 pounds and the average was 354. Compared with this, the average for all cows tested by the Dairy Record Club of which Mr. Maurer is a member, was 7,561 pounds. Mr. Maurer fed 32½ pounds of grain for each 100 pounds of milk produced, while the average for the Record Club was 28.4 pounds for each hundred pounds of milk produced. Grain per cow fed by Mr. Maurer was 3,536

CLINTON COUNTY—Hay and grain is looking good, though more rain is needed. Alfalfa and clover came through the winter in fine condition, and apple trees have blossomed full. Corn and potatoes are now mostly planted. The carry-over of old hay will be smaller than usual this year. About the usual acreage of beans will be planted, some under contract.—R. J. M.

RENSSELAER COUNTY—Land was very dry in the early spring, and during the last few weeks much rain has fallen and for the most part, the weather has been very cold. Hay has been very scarce but this year's crop looks promising. The outlook for fruit is fairly good. Eggs are bringing only 18 cents per dozen and butter 25 cents per pound. The prices received for milk shipments are disheartening. There is no scarcity of help on the farms now and wages are not quite so high. About the same acreage of crops is going into the ground. Many farmers are vealing their calves. Beef and pork are cheaper than last year. Early spring pigs are worth \$5 each.—E. S. R.

GENESEE COUNTY—Much rain lately has hindered farmers on low land. Meadows, winter wheat, oats, barley, and peas look fine. Some fields of potatoes are ready to cultivate and farmers are planting corn and beans. Dairy butter has dropped to 23 cents while eggs are back to 17 cents again. The use of a 20 acre field on the north side of East Avenue, Batavia, New York, for an unemployment garden has been offered by the

showing that he is an exceptionally heavy feeder.

We are certain that other dairymen have records that approximate these and doubtless there are some that are better. If so, drop us a line giving us figures and we will be glad to publish as many as space will permit.

Western New York Notes

FINAL awards on home economics were made at the recent annual meeting of the Erie County Home Bureau Council.

In the whole wheat exhibit, Lancaster captured first place. In the year's clothing projects, prizes were won by Mrs. Grover Kelkenberg, Clarence Center; Mrs. George Zitler, Williamsville; Mrs. Leonard Williams, of the Cattaraugus Reservation Unit, and Mrs. Carrie Barrows, Benton. The kitchen improvement prize went to Mrs. M. R. Howes, Lancaster.

During the unseasonable and unexpected snowstorm of May 23, 92 sheep belonging to Frank Curtis, farmer, of Fillmore, died of exposure. They had just been sheared and were in an open field all night.

Plowing contests, so popular in Canada where the great international match takes place each October, are now coming into their own in New York State through the agency of 4-H clubs. Genesee County 4-H club members held their second annual plowing contest June 2, with fifteen boys competing. It is reported that Erie County is planning a contest for Erie County boys soon. Western New York County club agents who hold plowing contests this year will look into the possibility of sending their winners to the big international match in Canada.

Frank Plinston, of Springville, Erie County, president of the New York Official Poultry Breeders' Association, says it was through an error that he was credited with owning the champion egg laying hen in western New York. Instead of standing second, in the state's list of over three-hundred-eggs-a-year layers, Mr. Plinston's hen was fourth, second place being won by another western New York poultryman, Charles Lefers, of West Valley, Cattaraugus County.

Putting in of crops has been greatly delayed this season by cold and rainy weather.

Grass is backward. Some farmers are plowing up their last year's seeding.

Bits O' News

Changes in the Canadian tariff recently announced will have no serious effect on any New-York State products as near as we can make out. In our opinion, the greatest changes to come about will be through the exclusion of some industrial rather than agricultural products from this section.

New York State is not ordinarily classified as a wool growing state, but last year

the wool growers from Schuyler County alone shipped eighteen thousand pounds through their cooperative association.

Genesee, Orleans, Orange, Wayne, and Oswego Counties are planning to cut their lettuce acreage approximately 7.3 per cent. This reduction in acreage has come about due to the low prices received the last two years when most growers have lost a great deal of money.

E. H. Anderson, the Manager of Agricultural Relations in the New York Central Railroad has recently been appointed Manager of the Stock Yards at Rochester to replace F. S. Welsh, who resigned to devote his entire time to the Merchants Despatch, Incorporated.

The Charles Lathrop Pack Forest Education Board, of Washington, D. C., have just awarded fellowships to seven foresters, for advanced training. John Fortin, a senior in New York State College of Forestry, was among those selected and his fellowship will enable him to take a year's graduate work in silviculture.

The State will finish planting this coming week approximately fifteen million trees on the 18,206 acres of land acquired this year for reforestation.

Dr. John H. Parker, of the Kansas State Agricultural College, has been appointed acting professor of Plant Breeding for 1931 and 1932 to carry on the work usually conducted by Dr. H. H. Love, who is making special investigations at the University of Nanking in China. Dr. Parker comes to the New York State College of Agriculture with a fine record both with the United States Department of Agriculture, and in his former position as professor of crop improvement at Kansas.

A publicity program for grape growers is being planned this year, and all shippers are urged to cooperate in bringing it through successfully. New York grapes have the quality and metropolitan housewives only need to be told of the benefits of home grown grapes to insure a wider market for the New York State product.

Liberty Hyde Bailey, the widely known and well loved horticulturist of Ithaca, was elected president of the Garden Club at their annual meeting on Long Island recently.

A. R. Mann, dean of the New York State College of Agriculture and Home Economics at Cornell University, has been named one of twelve commissioners to make an intensive study of foreign missions in the Orient.

The commission is composed of twelve outstanding religious, educational, and medical leaders of the United States, chosen to make, "the most thorough investigation of foreign missions that has been undertaken during the last 100 years of foreign mission activity."

Maurice O'Brien of Medina, has been given provisional appointment as Game Protector pending an examination to fill the position.

He takes the place of M. L. Callaghan, formerly of Medina, who was promoted to the rank of Inspector several weeks ago and assigned to the headquarters at Syracuse.

The confidence of F. L. Ronas of Philadelphia, New York, in himself and in pure bred Holstein stock led him to his present position as president of Jefferson County Holstein Friesian Association. Many years ago, Mr. Ronas secured a loan of \$500 from a neighbor and immediately invested it in a seven-months old pure-bred Holstein heifer calf. Thinking that Mr. Ronas had taken leave of his senses, the neighbor asked for the return of his loan, but on stating the situation to the local banker, the matter was satisfactorily cleared up.

Mr. Ronas has sold \$14,000 worth of bulls and still retains in his herd five daughters and several grand-daughters from that foundation animal.

Farmers who spend their vacation in the Adirondacks this season will have the opportunity of traveling the new Tongue Mountain Trail to the top of Five Mile Mountain. From this point many of the major peaks of the Adirondacks are visible, including Mt. McIntyre, Mt. Colden, Mt. Marcy, and Mt. Dix.

New York County Notes

Wiard Plow Company for those who are out of work. Other gardens have been offered by other people. The movement has found much favor among the unemployed. Charles Bowman, Farm Bureau Manager, will advise as to the crops to raise and soil tests will be made. Seed and tools will be furnished.

The Eastern Milking Shorthorn Breeders' Association of Batavia held an auction of 40 head of Shorthorn cattle on May 26. Twenty-eight head of Milking Shorthorns, the last of a large herd owned by Donald Woodward farms, were also sold at the Aiken farm, Le Roy.—Mrs. R. E. G.

ST. LAWRENCE COUNTY—The grain that was sown the last of April and early May is up and growing. A few farmers have yet to sow their oats, peas, and barley. Most dairy farmers are fitting their land for planting corn. The members of three dairy improvement Associations held a get together banquet at the Hotel Harrington, Canton, N. Y. Dr. Morrison and Professor Crandall were the principal speakers with George Sisson of the Jersey Breeders as toastmaster of the occasion.—H. M. K.

YATES COUNTY—Farm work has been held up the past week on account of wet weather, but a few fields of beans have been planted. A lot of corn is yet to be planted. Wheat, grass, and new seeding are looking fine, and the fruit crop will be abundant if the rain has not washed the pollen from the blossoms. The calyx spray is about completed.—L. C. W.

George Marsh

The Story Thus Far

Jim Stuart, manager of a Hudson Bay Company trading post, rescues Aurore LeBlond from almost certain death when her canoe upset in a storm on the lake on the shores of which Jim's camp is located. Aurore is a daughter of Jim's business rival; but despite this she and Jim are attracted to each other. One of LeBlond's lieutenants, Paradis, becomes extremely jealous of Jim. He learns that Jim and Aurore have a secret place on an island where they leave letters for each other. Paradis intercepts one of these letters and surprises Jim when the latter visits the spot. Paradis threatens to kill Jim but finally decides to take him to LeBlond. Jim gives Paradis a ducking in the lake and a warning.

Jim and his Indian aide, Omar, leave for headquarters to call on Christie, Jim's superior, who is dissatisfied with the trade balance at Jim's post. He gives Jim one year to make good. Christie's daughter, Mary, is more than casually interested in Jim.

On the return trip, Jim and Omar are fired upon from ambush. They find an Indian who confesses he fired the shots and that he was forced to do so by Paradis. Jim and Omar take the Indian to LeBlond's camp where he tells his story in the presence of LeBlond and Paradis.

* * *

"Right here, I want to say," interposed Jim, "that it was only after a long grilling, when he feared for his life, that this man named you, Paradis."

"When you put eet een hees head, eh?" sneered the other, palpably uneasy under the searching scrutiny of Louis LeBlond.

Paradis Loses His Temper

"No, I didn't put it into his head—I didn't have to," drawled Jim, enjoying the baiting. "After giving you that swimming lesson, I just naturally thought you were the skunk behind this shooting."

With a cough of rage, Paradis sprang at the grinning Stuart, to be caught from the side in the grip of Omar and hurled backward to the floor.

LeBlond sprang to his head man and dragged him to his feet. "You fool—you got what you deserved. Now what d'yuh say to this story?"

Grimacing with pain as he rubbed a bruised elbow, the shaken Paradis flatly denied having any part in the ambush. "Eet ees a lie—all lie!" he protested. "I refuse dis Pierre flour an' he mak' up de story."

"But why should he take it out on me and my man here unless he was paid to do it? He had nothing against us! He never saw us before," demanded Jim. "And how did he know we were at Lake Expanse? You told him and you learned it from MacLauren."

"He want to rob you of your grub!" "Nonsense! He knew we weren't freighting supplies—our canoe was empty." Then Jim turned to grave-faced LeBlond and MacLauren who were exchanging whispers. "If I report this thing to Christie at Lake Expanse, there'll be a police canoe here in September. You know what that means?"

LeBlond nodded. "We don't want the police in this, Mr. Stuart," he said quietly. "It's a bad mess, but you've only got this Indian's word against the word of Paradis."

"You forget, LeBlond, that Paradis doesn't love me. Do you, Paradis? No, he has some pretty good reasons for hating me." Jim turned to the fuming half-breed, "That little bath in the lake, for instance, when you swallowed so much water, eh, Paradis?"

"I don't know anything about that—he never told me," retorted the worried LeBlond. "But if you report this thing to the authorities, it will make no end of trouble. They'll have all of us down to the railroad and hold us there as witnesses."

Aurore Appears

"It certainly will be serious not only for Paradis but for the North-West Trading Company," agreed Jim with a stiff smile, while wrinkles of amused satisfaction furrowed Omar's square face as he watched the apprehension in the eyes of LeBlond. "But I don't intend to have Indians bribed to fire on me by your people," he went on. "If he'd hit one of us, it would have put you out of business and you'd stand trial to boot."

"You don't believe I had any knowledge of this?" protested LeBlond, the blood leaping to his dark features.

"No, of course not."

"What d'yuh want us to do, Mr. Stuart?" asked MacLauren. "We regret this thing deeply. But there's only this Indian's word against that of Paradis."

"Paradis had a motive for injuring me; this Indian had none. I'm satisfied the story is straight. Now if you'll get rid of Paradis—send him out of this country and keep him out, I won't report this shooting."

"That's a bargain," quickly agreed MacLauren.

The ash-grey face of Paradis worked convulsively as he heard his sentence of banishment. Then he found his voice. "You writer of love lettair," he stormed. "You t'ink you get her now Paul Paradis ees gone, eh? Ha! ha! You are de beeg fool—de beeg—"

From the side, unnoticed by his head man, the exasperated LeBlond struck Paradis full in the face with his open hand—then the trade-room door swung wide and Aurore LeBlond stood in the doorway.

* * *

CHAPTER XI

"WHY, what's happening? What's the matter?" Eyes wide with surprise, Aurore glanced from the dazed Paradis and the furious face of LeBlond to the men from Sunset House.

"Mr. Stuart!" she gasped, her dark skin deepening with color. "You — came here, and they didn't tell me. Father, what has happened?"

As she stood in her white frock, silk stockings and low shoes—an amazing costume for the forests—Jim stared, inarticulate, at her fresh beauty. Black brows contracted, she glanced inquiringly from her father's annoyed look to the enchanted eyes of Stuart.

"This is no place for you; we are talking business," objected LeBlond.

As he watched her, Jim wondered if Paradis had kept secret their meeting at the split rock—if she had made a rendezvous in the stolen note, to have him fail her. Then slowly over her expressive face broke the girl's infectious smile.

"It may be none of my business, mon pere, but as Mr. Stuart happened

not long ago, to have fished your daughter out of the lake, your wayward child as the female head of your house insists on welcoming Mr. Stuart to Bonne Chance." The room was hushed with tension as she walked to Jim, and gave him her hand.

"Welcome to our city, Mr. Stuart," she said, her dusky eyes alight with challenge. "Of course, after this momentous business, you'll have lunch with us." Then she dropped a low: Paradis told me—about the split rock."

He saw the pulse beating in her throat, the color deepen under her olive skin, while her hand for an instant pressed his. And the touch of her sent his heart off at a gallop.

"Thank you, but we're starting at once," he answered, and, poignant as a knife thrust, came the realization that this amazing girl, to whose nearness every nerve in his body was alive, would soon be but a memory.

"But why?" she demanded. Her candid gaze sought the impatient look of her father. "Why do you stand there as if you had no manners? Have you lost your voice? I am asking Mr. Stuart to lunch with us before he goes."

An Invitation Refused

With a resigned shrug of the shoulders LeBlond answered his indomitable daughter. "You do not understand—we are talking business—very important. Will you wait for us outside?"

She glanced doubtfully at Stuart and the men standing beside him. "Look's more like war than business, to me; and who hurt Paul's eye? Why, it's black and blue," she flung lightly over her shoulder as she left the room.

"It's agreed then," said LeBlond eagerly, "that you make no report to the authorities if Paradis goes?"

"Yes, if you ship Paradis to your Nipigon posts—out of this country."

"We'll shake hands on that, Mr. Stuart," said MacLauren, and the three men bound their compact. "Now will you take a meal with us before you start?"

"Yes," urged the relieved LeBlond, "my daughter expects you."

An hour with her, even in the presence of her father and his partner would have been unalloyed delight to the captivated Stuart, but the fierce protest in the stormy face of Omar and the responsibility for the safety of Pierre forced him to refuse.

Outside, in the clearing, Aurore was waiting. "You will allow us to make a small return of the hospitality you offered us? You will stay?"

"I'm sorry. I can't."

"You mean you don't care to?" She was walking alone with him now ahead of the others.

"Care to?" He looked boldly into her pleading eyes. "Don't you know that I want to see you—talk to you? Can't you feel it?"

She turned to the lake and he saw the slow pulse of color sweep to the raven hair that rippled from her temple as she asked: "Then I'm something more than an empty-headed, spoiled child to you, Mr. Jeem Stuart?"

Intoxicated by her nearness—he even caught the faint scent of the perfume she wore—Jim's voice thickened as he replied, almost inaudibly: "You're something more than a glorious creature who is going out of my life forever, Aurore LeBlond."

Her dusky eyes half closed as he watched her profile, with quivering lips; but she did not turn her face. "You mean that?"

"I mean much more."

A Meeting Planned

"Then why am I going out of your life? I stay here until September."

"I am going into the bush with Omar."

"When?"

"In two days."

American Agriculturist, June 13, 1931

"Then meet me at the white, sand-beach on the large island," she said hurriedly, for voices sounded close behind them, "to-morrow morning as early as you can. I go berrying with an Indian girl I can trust."

"I will be at the white sand-beach," he whispered, and his heart shook him with its pounding.

"We're sorry you won't allow us to return your hospitality, Mr. Stuart," said LeBlond as they stood on the beach where Omar and Pierre waited at the canoe.

"And we admire your sporting blood in not pushing this matter," added MacLauren. "You could make us sweat, there's no doubt about that, even if you have nothing but the Indian's story. Innocent or guilty, Paradis is going to pay for this mess."

"He's going to pay me if ever Omar, here, or I run into him again. You keep your agreement and I'll keep mine."

"Thanks, Mr. Stuart," returned MacLauren, flushing, "I'm glad we've got such a square rival on this lake."

With a wave of his hat to the white figure of Aurore who stood on the higher shore, Stuart stepped into the canoe, while two humiliated and exasperated fur men watched him until his canoe passed from sight behind the islands.

* * *

CHAPTER XII

"FIRST blood for Sunset House!" laughed Jim, elated with the outcome of the visit to LeBlond's—and glowing with the memory of Aurore's flaming face. To-morrow he should see her alone. With her heart in her voice she had asked him to come—this mocking, headstrong girl who had feared to meet his eyes.

He drove his paddle exultantly as he recalled her throaty, "Then I'm something more than an empty-headed, spoiled child to you, Mr. Jeem Stuart?" There was no mistaking her flushed face, her voice, her look, as through a curtain of mist. He, also, had come to mean something to this amazing girl. And to-morrow he was to meet her alone.

"Well, Omar, what d'you think? Will they keep their word and send our friend Paradis down to Nipigon?"

The paddle of the half-breed dipped methodically a number of times before he answered: "Why you hunt dat girl we'n we start for Pipestone in t'ree day?"

"What d'you mean?" Jim turned in surprise to the man in the stern.

"I see you. You mak' her face red as de sunset. W'y you do dis w'en you nevaire see her again?"

Jim's brown face slowly broke into a smile. There was no deceiving the astute Omar. And his unfailing loyalty atoned for his meddling.

"I asked you if you thought they'd keep their word. Paradis is a valuable man; LeBlond will hate to lose him."

Omar—the Watch Dog

Thrice the long paddle of Omar broke the water while Jim waited for the sternman's answer. Then the slit-like eyes of the half-breed met those of his chief as he replied: "You cross de lak' again, Omar go wid you."

There was no luring of Omar from his fixed idea, so, with a laugh, Jim resumed his paddling.

An anxious Sarah and Marthe stood on the beach beside old Esau and the yelping Smoke and the dog team, when the canoe returned. In the eyes of the Indian women the journey across the lake had been in the nature of a war party, and they chattered with relief when they saw there had been no casualties.

"Well, Sarah," said Jim, as the boat slid into the beach, "they didn't eat us as you predicted."

"You see her?" demanded the blunt Ojibwa. (Continued on Page 18)

With the A.A.
**CROP
GROWER**

Silage for Summer

Is it possible to put clover, oats, or other crops into the silo to feed during the summer?

THIS has been tried with success by many dairymen. The advantage, of course, is that the crop can be harvested all at once rather than cutting a little every day. Clover should not be put in when it is immature because it makes silage that will be too wet and messy. Oats make a rather strong smelling silage, but one that is palatable to cows. We will be glad to hear from dairymen who have had experience in using any of these crops or similar crops in the silo.

Oats for Hay

We are going to be short on hay. Do you advise cutting oats for hay rather than threshing it?

ONE common complaint is that mice work in oat hay worse than they do in other kinds of hay. We know of many dairymen who have had good results from oat hay. If used, it should be cut just as it begins to turn. Of course, a mixture of oats and peas or oats and vetch make a better hay than oats alone, but if you lack hay we believe it would be advisable to cut oats for hay rather than to thresh the oats and buy hay.

Keeping Qualities of Silage

How long will silage keep?

THERE are instances on record where silage has kept perfectly for ten or twelve years. Of course, it will spoil on top where it is exposed to the air, but after a foot or two is removed, the remainder of the silage is in good condition.

Keeping the Bacteria Count Down

(Continued from Page 3)

cans bottom up, preferably on a rack in the sun because bacteria will not develop in the absence of moisture.

* * *

Does whitewashing the barn have any effect on the quality of the milk?

Yes. It is, of course, true that a careful dairyman could produce cleaner milk in a stable that is not whitewashed than a careless dairyman could in a barn that is whitewashed. However, whitewash is a mild disinfectant and it brightens and cleans up the barn. Most regulations require it where milk is to be sold for fluid consumption and it is well worth the relatively low cost.

* * *

Do flies cut down milk production?

Anything that irritates cows will cut down on their production. Flies certainly irritate them and if they are numerous will interfere with grazing. In addition to this, it is a question of cleanliness. Flies are known to be carriers of bacteria. If they are numerous it is difficult to keep them out of the milk.

* * *

Can flies be controlled?

They can be controlled to a considerable extent. It will help to keep the manure drawn out during the summer-time. Fly sprays also help and we believe they are worth while, although, we do not know of any that will protect cows for twelve hours. Some dairymen keep the stables darkened and have bags hung over the doorway so that the flies will be brushed off when the cows come in. A few dairymen have used large wire screen fly traps with success, although these are no substitute for clean surroundings. In other words, it is better to prevent the flies so far as possible, rather than to try to catch them.

Teakettle Test PROVES High-Power speed

High-Power
Perfection
No. R-609

NEW INVENTION

HIGH-POWER
BURNER

Try this
simple test on your oil stove

PUT TWO QUARTS of cold water in a teakettle. Place it over a cold burner. Note the exact time you light the burner. See how long it takes to boil the water. High-Power, Perfection's newly invented burner, does it in ten and one-quarter minutes—with a clean flame that

never stains utensils! Will your stove do that?

High-Power burners are over 30% faster . . . economical of fuel . . . the greatest oil stove improvement in 25 years!

High-Power Perfection stoves are made in sizes for every kitchen, Porcelain, lacquer and baked enamel finishes in soft pastel green, ivory and black. Heavy steel construction.

Before You Buy Any Stove

Consider the cost of fuel. High-Power Perfection stoves give you the cooking speed of the costlier fuels, using the economical fuel . . . safe, clean kerosene. See the new High-Power Perfections at your dealer's and ask for a demonstration.

NOW! . . . MODERN ICELESS REFRIGERATION EVERYWHERE!

Superflex Oil Burning Refrigerator. Light the burners once a day. Keeps food fresh and pure, makes ice cubes, right in your kitchen.

Also made for use with natural, manufactured and tanked gases. Send for free booklet.

Some distributors' territories still open. Write for franchise details.

Milk and Cream Recipes

"Because It's Good for You" Will Not Have to Be the Sole Appeal for These Dishes

MILK, besides being one of our most essential foods, can be used in a great many attractive ways. The following milk beverages use milk or cream as a basis, and the additional flavoring makes these acceptable to some people who do not care for plain milk.

Egg Milk Shake

Beat one egg. Add one cup milk and vanilla or nutmeg flavoring. Chill and serve.

Egg Nog

1 cup milk Few drops vanilla
1 egg Few grains nutmeg
1 tablespoon sugar Few gr's. cinnamon
Pinch of salt

Beat egg until very light; add the sugar, salt, vanilla, and spices; then

the milk. Shake until sugar is dissolved. Serve cold.

Strawberry (or Raspberry) Milk Shake

Mix two tablespoons of syrup (made as follows) with one cup of chilled milk.

Syrup:—Use one-half as much sugar as washed and prepared fresh berries, water to cover. Cook until berries are softened then mash and strain through cheese cloth. Canned berries or jams may be used.

Caramel Milk Shake

Mix 2 tablespoons of caramel syrup with 1 cup chilled milk.

To make caramel syrup:—In a

saucepan, melt 1 cup sugar until light brown, stirring constantly, add 1 cup boiling water, and cook until a thick syrup is formed.

Chocolate Milk Shake

Mix one tablespoon cocoa paste, one cup milk. Chill and serve.

Maple Cream

(1 serving)

1 teaspoon maple syrup
1 tablespoon cream (cold)
½ pint ice cold ginger ale

Put maple syrup into chilled glass. Add the cream and stir lightly with silver fork. When well blended, pour in the ginger ale. The complete mixture should then form a light foam. If it

does not, again stir with fork. Serve immediately.

Rich Milk Shake

(1 serving)

¼ glass cream ¼ glass milk
½ glass ginger ale

Mix milk and cream then add the ginger ale. Mix with spoon or in a shaker. All ingredients must be cold.

Ice Cream Recipes

Summer time would not be summer—for us Americans at least—if there were not plenty of ice cream. Here are recipes which your family will surely enjoy.

French Vanilla Ice Cream

1 quart of cream
6 eggs

1½ cups granulated sugar
1 teaspoon of best vanilla extract

Reserve one cup of the cream to whip and add at the end of the freezing.

Put the sugar into the remaining cream and put it over a double boiler. While it is heating, beat the yolks of the eggs, but not too much. When the cream is hot, lift the double boiler from the fire, and stir in gently the beaten yolks of the eggs. Without returning the double boiler to the fire, stir its contents carefully until the custard masks the spoon with which you are stirring. Beat the whites of the eggs till they are very stiff, and stir them into the hot custard. Add 1 teaspoon of vanilla, and set the mixture aside to cool. While it is cooling whip the reserved cream.

When it is cool pack it into a freezer, and let it stand until it is quite cold, being careful to get no salt into the cream when you pack it.

When the cream is entirely cold, turn the freezer slowly, because slow freezing gives a finer grained cream. When the crank will turn no longer, carefully wipe the top of the freezer. Take off the cover; take out the dash; and with a spatula stir the cream down from the sides. Add the whipped cream and paddle the ice cream until it is smooth.

Ice creams should be frozen a few hours in advance of the time when they are to be used, and then packed down in a freezer. An hour before serving it is well to take the top off again and paddle the cream, and close it again until you are ready to use it. If you are

(Continued on Opposite Page)

All WORK and no PLAY is NOT for the Farm Woman of Today

THE Maytag Costs Less than "Elbow Grease." There is no economy in rubbing the life out of your clothes on a washboard and then cooking their strength away in a boiler. Besides your own health, strength and happiness are important. A Maytag does the washing in an hour or two, and eliminates all the hard work.

The Maytag Aluminum Washer has many advantages that appeal to farm homes . . . notably its one-piece, lifetime, cast-aluminum tub, and its super-wringer—the Maytag Roller Water Remover, with divided frame, oversize rolls and enclosed, self-reversing drain.

GASOLINE OR ELECTRIC POWER

Maytag was the first to equip its washer with an in-built engine—the gasoline Multi-Motor, and this famous, Maytag-built engine, now in its sixteenth year is the finest washer engine built. Simple, quiet, compact, reliable. It's a woman's engine. A step on the pedal starts it.

CHURN and MEAT GRINDER ATTACHMENTS

These time and labor saving conveniences are available with the Maytag Aluminum washer at reasonable extra cost.

THE MAYTAG COMPANY
NEWTON Founded 1893 IOWA

PERMANENT PHILADELPHIA FACTORY BRANCH,
Maytag Building, 851-3 North Broad Street,
Philadelphia, Pennsylvania

F-6-31

For homes with electricity, the Maytag washer is available with electric motor.

MAYTAG

MULTI-MOTOR
WASHER
MODEL "G"
(NOT ILLUSTRATED)
THAT SELLS FOR
LESS THAN \$130

A WEEK'S WASHING FREE. Write or phone the nearest Maytag dealer. Inquire about the Maytag free trial and easy divided payment plan. If the Maytag doesn't sell itself, don't keep it.

Wedding Ring Special

THE quilting patterns for the Wedding Ring Quilt need to be exact size to fit the open spaces of this block. We have designed two special patterns to fit the block perfectly and offer them as No. M296.

There is a spider web for the large pillow shaped white block and a flower with leaves to fit the ellipse shaped block.

These come on a special tough but transparent paper, the design perforated so that they may be used over and over with stamping paste.

M296 Perforated Pattern Wedding Ring Special, two parts 25 cents
M206 Box Black or Yellow Stamping Wax 25 cents

Order from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, New York.

THE WORLD'S GREATEST WASHER VALUE BY EVERY TEST

TUNE IN—Enjoy the Maytag Radio Hour over N.B.C. Coast to Coast Blue Network—Every Monday, Daylight Saving Time, 9:00 P.M., E.T. —8:00 C.T.—7:00 M.T.—6:00 P.C.T. Standard time is 1 hour earlier.

WASHER · TABLE IRONER

keeping the cream a long time, it is wise to do this a third time.

Philadelphia Ice Cream

4 cupfuls cream 1 tablespoon vanilla
1 cupful sugar 1/4 teaspoonful salt
Mix all the ingredients and freeze.

Neapolitan Ice Cream

2 cupfuls milk 6 egg yolks
1 cupful cream 1 cupful sugar
1/2 teaspoon salt 1 tablespoon vanilla

Scald the milk, pour slowly on the egg yolks which have been beaten with the sugar and stir constantly so the eggs will not cook, but blend with the hot milk. Place in a double boiler and cook until the mixture coats the back of a silver spoon. Strain through a sieve into a bowl, add the vanilla and cream and freeze.

Three-of-a-Kind Sherbet

3 cupfuls of milk 3 lemons
3 cupfuls of sugar 3 oranges
3 bananas 1 cupful of water

Make a syrup of the sugar and water, then cool. Strain the juice of the oranges and lemons. Mash the bananas to a pulp. Put fruit into the freezer, add the syrup, then the milk. Pack the freezer and freeze until firm.

Using Sour Cream

The warm weather which comes with summer also increases the supply of sour cream and if one knows how to utilize this delightful asset, it need never be considered a tragedy when the cream goes sour.

Sour Cream Johnny Cake

One cup of sour cream, one teaspoon of soda, one teaspoon of salt, one-third cup of sugar, one egg, three-fourths cup flour and three-fourths cup of corn-meal.

Beat the egg well. Add salt, sugar and flour and mix until very smooth. Add the sour cream and cornmeal. Dissolve the soda in a little boiling water and stir in the last thing before baking. Bake in a moderate oven

twenty minutes. Serves six. This bread is delicious served with a luncheon of salad and cold meat, tea and Johnny cake being the only hot dishes.

Sour Cream Sponge Cake

Three eggs, one-half teaspoon of salt, six tablespoons of sour cream, one cup sifted sugar, one cup pastry flour into which is sifted one teaspoon of baking powder and an eighth teaspoon of soda. Beat the egg whites very stiff, then add the sugar gradually and beat together. Beat the egg yolks and sour cream together until the mixture is full of bubbles, then add the mixture to the beaten egg whites and sugar until well mixed. Fold in the flour sifted with the other ingredients. Stir in one tablespoon of vanilla extract, one-fourth

RAINBOW FLANNEL baby blanket No. B5513 comes finished with three-tone woven borders of green, beige and orchid. The body of the blanket may be had in either pink or blue. Edges are finished with fast lock stitches. The package includes the white Bunny cloth patch which makes the blanket so adorable. Price, \$1.00. Order from the Embroidery Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, New York.

teaspoon of cloves. When cool, frost with one cup powdered sugar mixed with two tablespoons of cream, flavored with vanilla extract.

Sour Cream Filling for Cakes

One cup of thick sour cream, the yolk of an egg, two tablespoons of sugar, one tablespoon of cornstarch and one-half teaspoon of vanilla or lemon extract. Beat the yolk slightly, add the sugar and cornstarch mixed, stir in the cream and place in a double boiler and let cook until it coats the spoon, then add flavoring. Chopped walnuts or pecans may be added if desired.

Another filling recipe: Whip one cup of thick sour cream to a foam. Beat the white of an egg to stiff froth, mix together and beat in three tablespoons of granulated sugar, a very little mint flavoring and a few chopped nut meats.

Even the skimmed milk may sour and it too should not be wasted. It can be converted into cottage cheese, mixing with it cream or melted butter to supply the fat which has been skimmed away. Of course, whole sour milk may also be used for cottage cheese.

Tempt Appetite

LUNCHES packed with care will aid the school child's appetite and digestion. A good lunch is one which is packed to look attractive when the child opens it at noon, and contains the simple but carefully prepared food which he needs for health and growth. To prevent monotony the lunch should contain three or four different foods, one of them warm if a hot dish is not available at school. Warm food is especially needed in cold weather, says the New York state college of home economics.

To keep the contents neat and separate, use heavy waxed paper, paraffin cups with covers; also, supply a small thermos bottle and bright paper napkins.

Whole-wheat-bread sandwiches are

one of the staples of a school lunch. Variety may be introduced in the fillings. Spread both slices of the bread lightly with butter and fill with finely chopped raw vegetables seasoned with a little salad dressing, cottage cheese, grated American cheese, chopped dried fruit, chopped hard cooked eggs and, for older children, chopped cooked meat.

Milk is best for the child to drink each noon and it is often the basis of such a hot dish as cream soup or vegetable chowder which may be prepared at school or carried from home in the thermos bottle.

A raw fruit such as an apple or an orange is always enjoyed by the child and is easy to pack. Fruit or vegetable salads may be packed in the paraffin cups or jelly glasses. For dessert a piece of sponge cake, hard molasses cookies, cup custard or dried fruits may be used.

For ornamental planting projects, either of school grounds or grounds of other public buildings, the following have been suggested: For shade trees, the American Elm, Norway Maple, the Red Oak, and the Norway Spruce; for large shrubs, the Bush Honeysuckle, late Lilac, Arrowwood, and Ninebark; for medium-sized shrubs, the Golden-Bell Forsythia, White Kerria, and Van Houtte's Spirea; for small shrubs, Gloveflower, Japanese Rose, and Japanese Barberry; for vines, Engelmann's Creeper, and Evergreen Bittersweet.

Dainty and Sweet

3088

DRESS PATTERN NO. 3088 is dainty and sweet in its youthful simplicity. Furthermore it's as practical as it is attractive. Printed batiste, wool jersey, pique, shirting fabrics, gingham, shantung, printed silk crepe with tucked organdie trimming are suggested as possibilities for interpreting this charming model. The pattern cuts in sizes 14, 16, 18, 20 years, 36 and 38-inches bust measure. Size 16 requires 3 yards of 39-inch material with 1/2 yard of 39-inch contrasting. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with correct remittance in stamps. Add 12c for one of the new Summer Catalogs and address to Pattern Department, 10 N. Cherry Street, Poughkeepsie, N. Y.

De Laval

"3,000,000" Series

Combines the Cleanest Skimming with the Easiest Turning

THE De Laval Golden "3,000,000" Series are the world's best cream separators. Built with protected ball bearings they are the most completely equipped, cleanest skimming, easiest running, and most durable separators ever made. They are equipped with the famous De Laval "Floating" Bowl, have a turnable, anti-splash, sanitary supply can, completely enclosed gears, improved lubricating system with visible oil window, and the 16 and 17 sizes have the adjustable two-length crank. No other separator is comparable with them. Finished in gold and black lacquer colors they are likewise the most beautiful. Hand or power drive.

In addition there are three complete lines of De Laval Separators, ranging in price from \$30 up, providing a De Laval for every need and purse.

Each De Laval, regardless of price, is the best in its class and the best money can buy. They are:

BLACK UTILITY SERIES—Exactly the same as the Golden Series in construction and separating efficiency, but lacking several features. Sold at lower prices. Three sizes: 350 to 750 lbs. capacity.

JUNIOR SERIES—A new quality line of smaller separators for the one to three cow owner. Most efficient and durable. Finished in royal blue. Three sizes: 150, 225 and 300 lbs. capacity.

EUROPA SERIES—Another line of still lower priced small, European-made De Laval Separators. Excellent skimmers. Finished in red. Four sizes: 150 to 400 lbs. capacity.

See your De Laval Dealer or write nearest office below.

AMERICAN AGRICULTURIST

Under Frozen Stars

(Continued from Page 14)

"Yes."

"She wear dose gibodiegwason?"

"No." Jim was amused at the interest of his cook in the recent guest of Sunset House. "She didn't wear 'em. She wore a white dress."

Sarah and Marthe exchanged quizzical looks.

"And she had on white silk stockings and white shoes," went on Jim, enjoying the curiosity of the two women. "What d'you think of that for Kiwe-din?"

"Seelk ajigan!" The chins of Sarah and Marthe dropped in amazement. "Seelk, lak' dis?" demanded the former, pointing to Aurore's crimson scarf which she always wore.

"Yes."

"On her foot? Nia! n'go!" gasped the astonished and disapproving Sarah. "She put seelk on her foot?"

"The women wear silk stockings in the cities," Jim explained, and followed Esau and Omar to the trade-house, while the bewildered Marthe and Sarah wagged dark heads at the unbelievable news that women put so precious a fabric as silk to such base uses.

"You cross de lak' een de mornin'?" demanded Omar as Jim joined his men. Jim nodded.

"I follow een noder cano'. You tak' Smoke?"

"Yes, I planned to send Smoke into the bush to smell around. I won't be caught again."

Omar shook his black head. "You nevaire see her again. W'y you go?"

The head man stared in awed silence at the sudden pain in Jim's set face.

"That is why I am going; because I'll never see her again," said Stuart, in a low tone.

"Ah-hah, you lak' dat girl," replied the loyal Omar, softly. "Den I go tak' care of you."

An Early Start

The wide mirror of the great lake was still shot with reflected stars when two canoes left Sunset House. The awakened huskies of the sled team, sleeping here and there on the clearing, had stretched, yawned, shaken their shaggy bodies and followed Omar and Jim to the beach, but the big leader, Smoke, alone was allowed to enter Jim's canoe. At the knees of each paddler, as he pushed his boat out into the dusk, lay a rifle.

(Continued Next Week)

Give plants plenty of room so that soil can be kept loosened up around them. This helps to make a plant healthy and makes it easier to spray them in case a disease develops.

HANDY ANDY Says "Here's How"

To Care for the Dairy This Summer

By Ray Inman

The Service Bureau

A Department Devoted to the Interests, Welfare
and Protection of A. A. Readers

Entitled to Registration Papers

Will you help me get papers on calves that I bought from.....which were sold to me for purebred? I have written several times but get no reply.

THE best way we know of insuring the delivery of purebred papers is to hold out a part of the purchase price until the registration papers are actually delivered. We think it is fair for dairymen to insist on papers if the animals are sold as purebreds unless the seller specifically states that he will not or cannot furnish papers.

In several similar cases the breed associations have been very helpful in getting papers, but, of course, if a man deliberately misrepresents the animals and is unable to furnish papers there is nothing you can do except to take legal action against him to recover the difference in price between grades and purebreds.

Minerals Will Not Cure Abortion

Is there any mineral mixture which will act as a cure or preventative against contagious abortion?

SOME experiments indicate that animals which were receiving plenty of minerals are less likely to abort than those whose ration lacks minerals. However, authorities generally agree that no mineral mixture will cure abortion, or for that matter, certainly prevent it. At present there is no known cure for abortion, although State Colleges and Experiment Stations have worked out a system whereby the trouble can be controlled.

Cows Have a Right to Cross the Road

What is the law which governs motorists while we are driving cows across the road? Do we have to wait until we can drive them across or do motorists have to stop?

IT is our understanding that motorists must exercise reasonable caution when approaching a cattle crossing

and that they must slow down or come to a stop if the person in charge of the cattle signals them to do so. If under these conditions a motorist hits a cow, we believe he is legally liable for damages. The motorist, of course, is not liable if he hits a cow in the road when the cow is not attended by some person.

We advise putting up signs some distance each side of a cattle crossing to warn motorists that they are to use caution. Most motorists are reasonable, but unfortunately, there are a few who are decidedly unreasonable. We have a feeling that when a road is improved an underpass should be provided where needed for cows, without added expense to the farm owner.

What Does Cow Guarantee Cover

Can you help us get our money back on a cow we purchased that was guaranteed by the seller to be a good producer?

EVERYONE, of course, cannot agree as to just what constitutes a good producer. We will try but our experience has convinced us that guarantees of this sort are valuable only to the extent that the seller is willing to make good. Our general suggestion is that readers buy from men of known integrity and that if the animals are guaranteed, have it put in writing a little more definitely than our subscriber states.

In other words, is the cow guaranteed to have all quarters of her udder in good condition; is she guaranteed to be free from TB; is she guaranteed to give a certain amount of milk; in other words, just what does the guarantee cover? Even then, remember that a guarantee will do you little good if the seller refuses to make good and has no property against which you can collect a judgment in case you should secure one by legal action.

Interest in the beautification of homes and their surroundings is a sure indication of a better grasp of the fundamentals of living.

Keeps the
milk flow UP
and the
feed cost
DOWN!

OF course your herd needs a grain ration right now, for pasturage alone will not keep up bodily health or maintain a normal milk flow. But don't try to get along with a make-shift feed when you can buy B-B Marmico 16%, a fully-balanced ration at no more per ton than you pay for bran or middlings!

Frank Lepatral, of West Grove, Pa., fed Marmico to 75 Guernseys on pasture, testing it against a 20% ration costing \$16 a ton more. He writes: "Marmico is by far the better feed, producing just as much milk, and in some cases more." McLaury Bros., of Portlandville, N. Y., say, "We have used several hundred tons of Marmico and find it an excellent milk maker and pasturage supplement."

B-B Marmico 16% supplies the necessary concentrates and mineral balance to maintain bodily vigor and production. Its health-giving content keeps the milk-making organs in excellent condition and assures a maximum lactation period. It is the lowest-priced, safe, fully-balanced ration you can buy. Guaranteed to give satisfaction or money refunded. Ask your dealer for it today.

MARITIME MILLING CO., Inc., Buffalo, N. Y.

\$107,200,000 in 10 years

In 1921 members of this Association received \$10,000,000 more than they would have received if they had been paid on the old basis of western condensery prices. The Dairymen's League pooling plan did what dealers never had done under the old system. In 1930 this increase was \$17,500,000. A total of \$107,200,000 added to the milk checks of League dairymen in ten years of cooperative marketing.

Before League organization, western condensery prices fixed eastern fluid milk prices.

Upholding a Tradition That Began One Hundred Years Ago

This medallion commemorates the invention of the Reaper, in 1831, by Cyrus Hall McCormick.

To Build
Only the Best

McCormick-Deering Grain Binders

THE STORY of the mechanical harvest—from the time of the invention of the Reaper by Cyrus Hall McCormick down through 100 years to the large-capacity, efficient binders made by International Harvester today—is a history of untiring patience and painstaking effort to build only the best. What McCormick offered in 1831 was the world's first successful machine for reaping grain—and he spared no pains. This quality tradition is observed as closely today.

Examine the 10-foot Tractor-Binder and the other McCormick-Deering models sold by the McCormick-Deering dealer. Study the modern, practical features. You will see that nothing is left undone to provide you with a perfected machine to get your grain harvested in quick time with least labor and difficulty.

Write today for your copy of Illustrated Pamphlet No. A-86-U which describes McCormick-Deering Horse-Drawn and Tractor Binders in full detail.

Commissioner Lynch Discusses Three-Fourth Year License

EDITOR'S NOTE—The following letter from Thomas M. Lynch, Commissioner of Taxation and Finance in New York State, was received in answer to our recent editorial criticizing the Governor's veto of the three-quarter year automobile license bill. We are glad to present Commissioner Lynch's answer in the interests of fair play and because we believe in giving all of the facts on both sides of any problem. If the bill was incorrectly or inaccurately drawn, then, of course, it should have been corrected before making it into a law.

But we must still hold to our position that a properly drawn three-quarter year automobile license bill is in the interests of justice to many thousands of farmers who live on dirt roads and who are unable to use their cars during a large part of the winter.

In fairness to Commissioner Lynch and his associates, it should be said that his Department has been very active in recent years in helping to adjust tax burdens so as to correct injustices to farm taxpayers. Here is Commissioner Lynch's letter:

"IN the issue of the American Agriculturist of May 9, there appears an editorial entitled 'An Unjust Veto' in which it is stated that when the Governor vetoed the three-quarter year automobile license bill, an injustice was done to a large number of rural people. The editorial states also that it is understood that the bill was vetoed because the State is short of money. Just how much consideration was given to the State's financial condition, of course, I do not know, yet, it is a fact which can not be entirely ignored that had this bill become a law, the revenues from the registration of automobiles would have been reduced by at least \$1,400,000. in 1932.

"While it may be true that residents of the Northern Counties of the State, because of the severity of the winter seasons in those counties, might be benefitted by a law providing for the three-quarters registration fee, insofar as the residents of by far the greater portion of the State are concerned, it is not apparent that the same measure of benefit would obtain. Generally, a person who registers his car in April has owned that car at least during the preceding months of the year and it is unlikely that the owners of such cars would deny themselves of the uses and benefits thereof for three months or more for the sole purpose of saving a small part of the registration fees which are not exorbitant in this State when compared with those of other States. The situation is found to be different with respect to cars registered in July. Usually, those are newly acquired cars. It would seem, therefore, that there is justification for the one-half year's registration fee in July, but there is no similar justification for the three-quarters registration fee in April.

Says License Exempts from Taxation

"Many seem to think that the registration of an automobile and the payment of the fee thereof constitutes only the purchase of the right to use that car upon public streets and highways and no more. The fact is that the owner of that car purchases at the same time, and without additional cost, exemption of that car from all taxation both state and local. Had this proposed bill become a law, it would have been possible also for the owner of a car which he has owned throughout the year to have that car exempted from all taxation throughout the year by paying but three-quarters of the annual fee. Sound reasons have been advanced that further reduction in the cost of that exemption should not be made.

"Another serious objection to this bill is that it was improperly drawn and would have caused confusion and possibly trouble had it become a law. Although there was reference to motor vehicles to be used for purposes men-

Fruit and Vegetable Law Has Teeth

Federal Government Revokes One License---Other Actions Started

WHEN Congress passed the Perishable Agricultural Commodities Act it armed the Department of Agriculture with a law full of teeth which threatens to strike terror in the hearts of dishonest commission merchants and food speculators. The findings of the Federal officials show that no section of the United States is clear of unfair practices and that both commission merchants and carlot buyers, especially of the speculative type, have taken advantage of growers and shippers in many of our more important fruit and vegetable growing districts. Within the last four weeks of-

Amos Kirby

the enforcement of this law have brought some of these practices out into the open.

The proceedings in the case of a Richmond, Virginia commission merchant who failed to make proper returns to shippers and who failed to keep proper records on the sales of perishable products according to law, and the practice of a Philadelphia, Pa., carlot buyer in refusing to accept merchandise, bought on an F. O. B. basis, when the market had declined, are given as two examples.

In mentioning the first two cases of violations of the Perishable Agricultural Commodities Act that have come before the public, the writer does not cite them alone as being worthy of

By AMOS KIRBY
New Jersey Editor, American Agriculturist

grave concern, but when it is claimed by the Federal officials that they have 500 cases already listed coming under the same classification as one of these violations it becomes a matter of national importance.

At this point let us make it clear that there are honest commission merchants and there are legitimate buyers of perishable products who are rendering a great service to agriculture. To this large group of business men, the Perishable Agricultural Commodities Act holds no fear and shippers can patronize them with the absolute assurance that they will get a square deal at all times. But in the produce business there are also commission men and carlot buyers who can be

classed as speculators, who are unfair to their shippers and dealers and who are rendering no service to the producer or the consumer. It is this latter class that forced the passage of the Perishable Agricultural Commodities Act.

The revocation of the license of a firm in Richmond, Virginia, the first to be recalled under the Act, brings to light certain alleged practices of the firm. In an announcement made public on May 19, 1931, giving the reasons why this license was revoked, the Department of Agriculture states: "This licensee collected a loss and damage claim of \$35. on a shipment of watermelons sold on commission and failed to credit or pay over to the shipper any portion of the \$35 which it had received from the railroad."

Just how general this practice may be no one can determine, but as a shipper, the writer has often been asked to make claims for shortages and only once has a check been received from a commission merchant. One dislikes to think how much may have been lost to shippers through such a practice.

A second charge against this house reveals that on September 20, 1930, the Alasa Farms, Alton, New York, shipped a car of Wolf River apples to Richmond. The apples were duly received and sold, but the receiver failed to make any settlement until December of that year. At that time the defendants sent an unsigned and undated check for \$463.52 in payment, which was returned by the bank. Then the shipper drew a draft on the firm and that too was refused. Then the

(Continued on Page 10)

How the Perishable Agricultural Commodities Act Protects Shippers

APPROXIMATELY a year ago Congress passed a law commonly known as the Perishable Agricultural Commodities Act, requiring that certain dealers in fruits and vegetables conform to a set of regulations and take out licenses with the U. S. Department of Agriculture before December 1, 1930.

The law is intended as a protection to shippers of fruits and vegetables who sell to commission men and dealers in other states. It does not apply to transactions where produce does not travel from one state to another. Complaints can be made by shippers to the U. S. Department of Agriculture when buyers of perishables have violated the provisions of the Act.

In general, the Perishable Agricultural Commodities Act prohibits unfair treatment of shippers, including the making of fraudulent charges, rejection of purchased produce, the making of any false or misleading statement, or the rendering of incorrect returns. It is believed by those who have studied the law that it will serve as a valuable protection to fruit and vegetable growers. Any reader who would like to have complete information about the law can get it by writing to the Bureau of Agricultural Economics, U. S. Department of Agriculture, Washington, D. C. or to American Agriculturist.

"Making Hay While the Sun Shines"

Modern Methods Save Time Without Lowering Quality

THIS season of the year is an extremely busy one with cultivating coming on and a hundred and one other things to occupy the farmer's time, but one thing that cannot be neglected is the harvesting of the hay crop. This year has been especially favorable and most sections of the state report a fine stand not only on new seeding, but on the old meadows. To get the full benefit of this crop, it should be cut early and cured properly. Questions about the curing and harvesting of hay constantly come up and we have tried to answer some of the more common ones.

* * *

What is the proper method of curing hay with the side delivery rake? I have heard that one should buy the left hand side delivery rake. Why is this?

The best procedure in curing hay with a side delivery rake is to mow the hay early in the morning, then rake two to six hours after cutting, depending on the amount of sun and wind and the maturity of the hay. This enables the sun to cure the hay faster, and it cures uniformly in the windrow, it usually can be put in the barn the next day. Sometimes conditions are so favorable that the whole job can be finished in one day.

The side delivery rake is also used to turn the windrow without shaking off the leaves and put the hay in the best possible shape for further drying.

The left hand side delivery rake, traveling in the same direction as the mower puts the hay in light, airy

windrows for curing, with the valuable leaves, in the center away from the sun, while the stems, slower to dry than the leaves, are on the outside where they get the maximum amount of sun and wind to hasten the drying process. The right hand rake, on the contrary, forces the leaves to the outside where they dry quickly, resulting in an unevenly cured swath and much shattering of the crop.

* * *

What is the proper time to cut hay?

There are several points to be considered in determining the time to harvest the crop. When can the crop be most satisfactorily cured? When is the least damage caused to the succeeding crop? At what stage is the largest yield obtained, and

is it obtained at the same time as the greatest degree of digestibility? When is the total amount of digestible nutrients obtained the largest?

Of course, there are other factors that come in here, depending upon the individual farmer's situation. There is no doubt but that early cutting will give the best quality product. However, many farmers feel that the increased value is not enough to cover the extra labor and the greater possibility of bleaching by rain. We make the following recommendations for cutting the various hay crops, but with the above reservation:

Alfalfa—Shortly after the first blooms appear.

Alsike clover—When the plants are in full bloom.

Red clover—When the crop is in full bloom.

Timothy—Between the first and second blossom.

Other grasses—When the accompanying legumes are in the most favorable condition.

* * *

Does alfalfa cure best in the cock or can satisfactory hay be made by curing in the windrow?

In curing alfalfa, three principal points must be kept in mind. The reducing of the moisture content, the development and preservation of aroma, and the prevention of the loss of leaves and impairing the quality of hay by undue leaching and repeated wetting. Since alfalfa should be cured slowly, and as far as possible in the shade, and since it is easily injured by

(Continued on Page 6)

The hay loader, the tractor, and the box rack form a combination which makes hay in a hurry.

Too Much Wheat

IN spite of the rather obvious fact that you cannot feed hay to automobiles, we still continue to produce about as much hay as we did in the day of the horse. Even though the American diet has changed most radically in the last twenty-five years, thousands of farmers continue to grow the products for which there is no longer much demand. Notwithstanding the truth that people are no longer eating wheat as they once did, that the diet has turned toward fruit and vegetables, and even though the world demand for American wheat has almost completely ceased, yet the harvest of winter wheat which is about to begin in the West will be one of the largest ever, doubling the tremendous surplus already on hand.

The estimated yield this year of winter wheat will be 649,000,000 bushels—45,000,000 more than last year's harvest. The troubles of wheat farmers have been added to rather than decreased, in our opinion, by the sincere attempt of the Farm Board to help them. It is estimated that the Farm Board has two hundred million bushels of old wheat now on hand.

We have said repeatedly that the Government cannot artificially fix prices by damming up the supply. We leave it to you to guess what is going to happen when this two hundred million bushels of wheat is released on our already over-loaded market?

What is the answer to this whole situation, you ask? No one knows for sure, but as for ourselves, we believe that while there is temporary trouble ahead for agriculture, the future will be good for the right sort of man. The wrong sort will not be able to continue in the business so there will be fewer farmers, but those who remain will be thoroughly educated in their business and they will find some way to meet change with change and not to continue to produce products for which there is no longer any demand.

Lilacs

ON our desk as we write there is a little book called "The Old Timer" given us by Bob Adams, the rude rural poet of Cornell.

Bob Adams is our modern James Whitcomb Riley. He is the poet of the farm and the farm home, whose rhymes we have often quoted in these columns because every country dweller should know them. We do not know what this little book costs but you could find out by writing to Bob Adams at Ithaca, New York, or you can

get a larger and more complete volume of Bob Adams' poems called "Rude Rural Rhymes" by writing to the Macmillan Company of New York City. In the meantime, here is a beautiful expression of sentiment as good as anything of its kind that has been written. It is called "Lilacs."

O here and there, on poorer lands
An old deserted homestead stands
In patient sadness to deplore
The guests who come again no more.
For many feet that used to go
Across its threshold to and fro,
Far roads and trails have learned to know,
And those who built it long of old
Have mingled with the churchyard mold.
The human brood has swarmed and gone,
But lilacs in the yard bloom on,
And ever, as the old house grieves,
Are pressing upward toward its eaves
The tender green hearts of their leaves.
The mother's hands were rough with toil
Who set that lilac in the soil.
Thanks be to God who gave the wife
One touch of beauty in her life.
The father worked from sun to sun;
For living was not lightly won.
The fields where he was wont to grub
Are overgrown with brush and scrub.
His walls are down, their mighty stones
Are crushed to make a roadway's bones.
Lost are his labors great and small,
But mother's bush outlives them all.
And ever with the warmth of May,
What time we keep Memorial Day,
The lilac wakes to sudden bloom
And wafts a message to her tomb.
Gone are the sons her pangs gave birth,
Her fires are dead upon the hearth;
Sunk the flames and black the embers,
But the lilac still remembers.
It blooms for her and spreads its scent,
The incense of a sacrament.

A Little Story from Life

I HAVE a friend, now an elderly man, who though not usually given to talking about himself has told me the following story little by little as our friendship has developed.

When the World War broke out this friend and his wife had two fine boys. The older was a graduate of a university and law school and active and successful in business. Brought up with the ideals of an American family he soon left his home and business and enlisted. In due time he was sent to France, and again in due time his father and mother received a telegram from the War Department containing those words that have brought the end of the world to so many American homes in the course of our history: "Your son has been killed in action."

The younger boy was still in college when the war came and had another year or so to complete a seven-year course for a doctor. He wanted to enlist at first but the Government told him that he would be more valuable as a graduate physician and asked him to complete his medical course before joining the army. He did so, then enlisted and was assigned as surgeon to a camp near Boston at the time when the influenza was raging. Working night and day, he soon became tired out, caught the disease himself, and died.

Brooding over the death of her children, the mother's health became deranged and now she is gone leaving the father as the sole remaining member of the family, living on alone in his big house peopled only by memories.

Nothing is gained, usually, by dwelling upon or emphasizing such tragedies for they are best forgotten as well and as fast as possible. Sometimes, though, tragedies bring out so much that is brave and fine that to know about them serves as an inspiration for all of us.

Have the terrible experiences of my friend made him pessimistic and cynical and hard? Quite the contrary. In recent years he has turned more of his attention from business and from making money to serving in places where he feels he can be of more good to his fellows. When we were on a trip together I asked him if he was returning home that same day, and he replied, with a grave little smile, "No. You know it does not make much difference now where I am." At another time I remarked that it must be lonesome for him living in the big house alone. He an-

swered mildly that it was and then added, "But I have not long to wait."

Thinking of all the expense and the years of planning and sacrifice that went into the education of his boys, all seemingly for naught, I inquired of my friend if he did not sometimes wonder what this business of life was all about anyway and if he did not question the ways of Providence? "Well, no," he said, "for I figure that I will soon know—I will soon know what the answer is."

So when I am inclined to be discouraged over some minor set-back, or lonesome because of a temporary separation from my family, I think of this friend of mine and his irreparable losses, and particularly I think of his kindly, philosophic attitude toward life, toward his fellows, and especially of his sublime faith that in spite of all, everything is for the best and will come out right somehow, somewhere.

Good in Spite of Its Problems

WE HAVE, up-State, a place of about thirty acres where our family lives during the summer and where we go each week-end to get a little rest and change from the editorial desk. There is a large garden, and a kind friend loaned us a couple of fine, purebred Guernseys.

Did you ever come home from the fair or the circus or from some long trip and have a feeling of great relief to get out of "store clothes" and into the old overalls again? Well, that is just the way we feel when we get away from the crowd each week and fool ourselves into believing that we are farming a little again. At least there is enough actual practice to give us some of the real point of view and feelings of the farmer and of the man who works with his hands.

As we write this we are just back from two or three days, when it rained off and on every day. Between showers we fixed a little pasture fence, hunted the lost cows out of the wet swamps where we got sopping wet, fought the bugs in the garden, and mowed weeds with the old hand scythe.

The city person does not think so much about the weather but the farmer has to. How irritating it is to sit in a house and wait for it to stop raining while there are crops to get into the ground and other pressing work to be done. How irritating a cow can be when she or the entire herd chooses the most disagreeable morning of the whole summer to hide in the most distant or most inaccessible part of the pasture.

And as for bugs and diseases, you cannot name a single plant or animal that the farmer grows that does not have more than sixteen pests to hop on it and destroy it the moment the farmer lets up his vigilance. Then, of course, after a farmer gets his stuff grown, too often there is little or no market for it.

Still, with all of its problems, farming is a natural, normal life. If you do not believe it, try living in town for a while after having had farming experience and see how often your heart turns with longing to the country.

Eastman's Chestnut

SCOTCH stories never wear out and the best of it is that no one enjoys a good Scotch story better than a Scotchman himself. I got a good laugh from the following Scotch chestnut taken from the "De Laval Monthly."

A magician performing in a Scottish town put a woman into a box from which there was no apparent outlet, and shut the lid. When he opened it again, there was nothing inside but a couple of rabbits.

After the performance a Scotsman went to the magician and asked him if he could perform the same trick if his (the Scotchman's) wife were to get into the box.

"Why, yes," answered the magician. "But are you anxious to get rid of your wife?"

"Weel," answered the Scot, "It's no sae much that, but wee Willie got me tae promise him twa rabbits for his birthday!"

Roosevelt Outlines Long-Time Land Plan

Puts New York State in Limelight at Governors' Conference

EDITOR'S NOTE—On this page you will find the major part of Governor Roosevelt's talk at the recent Governors' conference at French Lick, Indiana. The address received wide comment, practically all of which was favorable. See editorial on opposite page.

At a time when our country, in common with most of the rest of the world, is suffering from a severe dislocation of economic progress, people are naturally and properly asking questions about the future. It seems strange to them that, with capacities for production developed to the highest degree the world has ever seen, there should come this severe depression, when many who are anxious to work cannot find food for their families while at the same time there is such a surplus of food supplies and other necessities that those who are growing crops or manufacturing can find no markets.

This situation has suggested to many that some new factor is needed in our economic life, and this new factor must come from utilizing our experience and our ingenuity to draft and to organize concerted plans for the better use of our resources and the better planning of our social and economic life in general.

More and more, those who are the victims of dislocations and defects of our social and economic life are beginning to ask respectfully but insistently of us who are in positions of public responsibility why government cannot and should not act to protect its citizens from disaster. I think the question demands an answer and that the ultimate answer is that government, both State and national, must accept the responsibility of doing what it can do—soundly with considered forethought, and along definitely constructive, not passive lines.

These lines fall naturally into a number of main heads, such, for instance, as a scientific tariff aimed primarily to create a movement of world commodities from one nation to another; such for instance, as a better thought-out system of national taxation than we have at the present; such, for instance, as a survey and plan to cut the excessive cost of local government; such, for instance, as the extension of the principle of insurance to cover fields of sickness and of unemployment which are not now reached; such, for instance, as the dislocation of a proper balance between urban and rural life.

Discusses Land Utilization

It is this last phase that I am concerned with today and the phase that best covers all its aspects is "land utilization and State planning."

Land utilization involves more than a mere determination of what each and every acre of land can best be used for, or what crops it can best grow.

A century ago 75 per cent of the population lived on farms and 25 per cent in the cities. Today the figures are exactly reversed. A generation ago there was much talk of a back to the farm movement. It is my thought that this slogan is outworn. Hitherto, we have spoken of two types of living—urban and rural. I believe we can look forward to three rather than two types in the future, for there is a definite place for an intermediate type between the urban and the rural, namely a rural-industrial group.

State Surveys Problem

I can best illustrate the beginnings of the working out of the problem by reviewing, briefly, what has been begun in the State of New York during the past three years towards planning for a better use of our agricultural, industrial and human resources.

The State of New York has definitely undertaken this responsibility. Two

and a half years ago the State administration, realizing that the maladjustment of the relationship between rural and city life had reached alarming proportions, undertook a study of the agricultural situation with the immediate purpose of relieving impossible and unfair economic conditions on the farms of the State, but with the ultimate purpose of formulating a well thought out scientific plan for developing a permanent agriculture.

The immediate situation was met by the enactment of several types of laws that resulted in the relief of farms from an uneven tax burden and made a net saving to agricultural communities of approximately \$24,000,000 a year.

First, the State adopted additional State aid for rural education, especially in the communities which are so sparsely settled that one-room schools predominate. This State aid gave the smaller rural schools the same advantage already enjoyed by the schools in the large communities.

Second, by a fair equalization of State aid to towns for the maintenance of dirt roads, putting this aid on the basis of mileage rather than on a basis of assessed valuation.

Third, through the gasoline tax additional aid is given to the counties for the development of a definite system of farm-to-market roads.

Cheaper Electricity

Fourth, the State is embarked on a definite program of securing cheaper electricity for the agricultural communities. We propose to harness the St. Lawrence River as a part of this program, and the electricity developed is, by the new law, intended primarily for the farmer, the household user and small industrialist or storekeeper rather than for large industrial plants.

This was the program to relieve immediate needs, but it has rapidly developed into something which is far deeper and far more important for the future, in other words, State planning.

In all of this work, it is worth recording that not only the immediate program, but also the long-time planning is being worked out in a wholly non-partisan manner. It has, of course, received the benefits of study by the Legislature and legislative commis-

sions. Much of the program has been worked out by the Governor's agricultural advisory commission.

Drive Centers on Good Land

This State program calls for an intensive development of the good land. For the farms that are on a permanent basis, we have definitely embarked on a policy of providing a farm-to-market road that is passable at all times, available electric power, telephone lines, hospital facilities and a good high school. We believe that, as a general State policy, it is better, under present-day conditions, to provide these services and use the good land intensively rather than attempt to use the submarginal land.

When we came to the definite acceptance of responsibility, for State planning, the first obvious step was to find out what the land area of the State consisted of. We knew, for example, that out of 30,000,000 acres, 3,000,000 were in cities, villages, residential and industrial areas; 5,000,000 were in mountains and forests, of which the State has acquired 2,000,000 acres for parks; 4,000,000 acres were once farmed but now abandoned, leaving a total of 18,000,000 acres, divided into 160,000 farms.

The first definite step was to start a survey of the entire State. This involved a study of all the physical factors both above and below the surface of the soil, and a study of economic factors, such as market possibilities, what the area is now being used for, for what it is best adapted, and so detailed that it gives separate data for each ten-acre square. Already one whole county has been thus surveyed and we expect to cover the entire 18,000,000 acres involved within the next ten years or less.

... we propose to find out exactly what every part of the State is capable of producing. From the surveys already made we have come to the belief that a certain percentage of the farm land in the State now under cultivation ought to be abandoned for agricultural use. We are faced with a situation of hundreds of farmers attempting to farm under conditions where it is impossible to maintain an American standard of living. They are slowly breaking their hearts, their health and

their pocketbooks against a stone wall of impossibilities and yet they produce enough farm products to add to the national surplus; furthermore, their products are of such low quality that they injure the reputation and usefulness of the better class of farm products of the state which are products, packed and shipped along modern economic lines.

Advocates Forest Program

What then are we to do with this submarginal land which ought to be withdrawn from Agriculture? Here we have a definite program. First, we are finding out what it can best be used for. At the present time it seems clear that the greater part of it should be put into a different type of crop—one which will take many years to harvest but one which, as the years go by, will, without question, be profitable and at the same time economically necessary—the growing of trees.

This we are starting by a new law providing for the purchase and reforestation of these lands in a manner approved by the State, part of the cost being borne by the county and part by the State. Furthermore, a constitutional amendment will be voted on by people this autumn providing for appropriations of \$20,000,000 over an eleven-year period to make possible the purchase and reforestation of over 1,000,000 acres of land, which is better suited for forestry than for agriculture.

Cited As Recreation Aid

Modern society moves at such an intense pace that greater recreation periods are needed, and at the same time our efficiency in production is such that more time can be used for recreation. By reforestation this land can be turned into a great state resource which will yield dividends at once. The Conservation Commissioner has just issued an order throwing open for hunting and fishing the 25,000 acres recently purchased under this program.

These reforested areas are largely at the higher elevations at the headwaters of streams. Reforestation will regulate stream flow, aid in preventing floods and provide a more even supply of pure water for villages and cities.

We are asked what will be done for the population now residing on these submarginal lands? The answer is twofold: In the first place, most of the comparatively small number of people on these farms which are to be abandoned will be absorbed into the better farming areas of the State, and in the second place we are continuing the idea of the State-wide plan by studying the whole future population trend. That is where there is a definite connection with the city dweller and the population engaged in industry.

Linking Farm and Industry

Experiments have already been made in some States looking to closer relationship between industry and agriculture. These take two forms, first, what may best be called the bringing of rural life to industry; second, the bringing of industry to agriculture by the establishment of small industrial plants in areas which are now wholly given over to farming. For example, one of the large shoe manufacturing companies was established in a small New York village. Many of the workers live in this village and many others live in the open country within a radius of ten miles or more. Another example is a valley in Vermont where a wood-turning factory for the making of knobs for lids of kettles has already been so successful that the trend of the rural population to the city has been definitely stopped and the population of the valley finds that it can profitably engage in agriculture during the summer with a definite wage earning capacity in the local factory during the winter months.

As a nation we have only begun to
(Continued on Page 7)

The Song of the Lazy Farmer

OF ALL them other crops of his, my neighbor says alfalfa is the best that grows from out the soil, it pays him better for his toil than any other crop that grows, he says there ain't a cow but knows alfalfa hay is what she needs, she can't make milk from straw and weeds. Alfalfa hay is good for kine, it puts the finish on the swine, it makes the chickens lay more eggs, the horses all kick up their legs and prance about when they are fed alfalfa ere they go to bed. With good alfalfa in the mow he makes a profit from each cow, good green alfalfa, full of leaves makes farmin' pay, so he believes.

I tried it once, and then I quit, because there wan't no end to it. I'd hardly start to plowin' corn before the buddin' shoots would warn me that there must be no delay, I'd have to start to makin' hay. And so I'd work away and sweat for ev'ry ton of hay I'd get, I'd

hardly git it put up when that blamed alfalfa'd grown again. The second crop must be put by the hottest weather in July, another crop or two in fall I'd have to pitch, and that ain't all, all winter long I'd have to sit and milk my cows, from out each tit I'd have to milk a pail or two, that's what alfalfa made 'em do. I git the backache to this day when I think of alfalfa hay!

Join our August vacation party to **YELLOWSTONE NATIONAL PARK**

WE'RE all going together, like a big family party . . . and we'll have the time of our lives. A fine Special Train, with all modern conveniences, will whirl us away for an eleven days' visit to Magic Yellowstone Park. After a wonderful trip on our luxurious private train, we embark at Bozeman for four days of adventuring in comfortable motor coaches. Our trail starts down the rich Gallatin Valley, where we will visit a vast western cattle ranch. Lunch at Karst's Dude Ranch. Then off through the mountains and into Yellowstone for our first night's stop at Old Faithful Lodges. Music and dancing make our evenings memorable social events. Our days will be spent viewing the many strange and inspiring sights to be found only in this enchanting spot.

Through securing "party rates" we are able to offer this trip to our readers at a big saving in cost. The ticket includes all expenses, even tips, and our experienced tour conductor frees you from all worries of plans and arrangements. Plan now to join the party. The coupon will bring all details promptly.

Bears in
Yellowstone
afford tourists
much amusement.

Tour Director, AMERICAN AGRICULTURIST,
461 Fourth Avenue, New York, N. Y.

A.A.'s Western New York Farm and Home Talk

Rain Helps Hay Crop; Fruit Prospects

By M. C. BURRITT

IN striking contrast to the drought of last season which began to make itself felt about this time last year, we are now having almost too much rain. A fairly heavy rainfall has occurred at least once a week for more than a month now. The ground is pretty well saturated to a considerable depth and water stands in low places easily. These rains have assured a good hay crop. Grass is already heavy and lodging some. Alfalfa is almost ready to begin cutting. The crop will be fine.

M. C. Burritt

During the week most tomatoes for the canning factory have been planted. This was done with good moisture just after a rain and now at the end of the week another good rain should start them all off in fine condition. The acreage has been somewhat restricted but is still large.

Next week cabbage planting should be well under way. None has been set here as yet, but planting has been begun to the East in Ontario County. Cabbage root maggot has been unusually bad in early seed beds this season and a considerable percentage of the plants have been destroyed. This will no doubt have some tendency to reduce the acreage as it may not be possible to get all the plants wanted. High winds blew out quantities of seed which had been planted on nearby muck land about two weeks ago which hasn't helped matters any. Later planted seed beds may do better and help to make up possible shortages.

Fruit Prospects

With a good apple crop now assured many growers are beginning to wonder what they will be able to do with it when they get it. There will be plenty of competition in the barreled apple states and good quality fruit will count heavily. Prospects in Virginia continue to be for a good normal crop. The season is about ten days late there. A correspondent in Virginia writes:

"It is too early to estimate prospects but the bloom was generally heavy. The Newton Pippin bloom was spotted but is setting as well as usual. Prospects are medium. Winesaps bloomed very heavy but are not setting so well. Ben Davis are spotted. Stayman and York are setting well in the Northern Valley where plantings are heavier but not setting so well in the Southern Valley. Early apples are very promising. While Virginia is not an important peach state, the crop this year is the heaviest in its history and may reach 1,000 cars."

A friend with a large orchard in Michigan tells me that his crop there is very large and that he is already wondering whether it will be worth harvesting. The set of many varieties here in Western New York is not as heavy proportionately as the bloom. Only those varieties which were in full bloom on the warm bright days of May 18 and 19 or which are strongly self-fertile have set a full crop. Among the varieties which have not set so well are Twenty Ounce, Greening, and Spy. Baldwin will be very close to a full crop. On the whole, and at this time, I would guess that the total crop in Western New York will be nearly fifty per cent greater than that of 1930.

It is a good growing season and everything looks well to date. Crops and orchards appear thrifty and Western New York looks prosperous on the surface. As in many other lines of business, appearances are often deceiving. Putting money into crops, in the way of seed, fertilizer, labor, etc. is always somewhat of a gamble, and under present uncertainties, it is more so than

ever. We all need the assurance which comes with stable prices and buying power. The question in everyone's mind is when will it come? How long will it be and can I hold out? It is a time for sound thinking and conservative but not alarmist action. Many difficult and uncontrollable factors are at work toward a solution. It is bound to come some time.

Meanwhile, we can find comfort by comparing our conditions and our uncertainties with those of the rest of the world or even of many parts of the United States. We are enjoying many great privileges, opportunities, comforts, and conveniences that few others in the world have, and, in spite of troublesome time, it might be much worse.—Hilton, N. Y., June 6, 1931.

"Making Hay While the Sun Shines"

(Continued from Page 3)

undue exposure to sunshine or rain, curing in the cock would seem to be the best method. However, in a climate such as is prevalent in New York State with frequent rains during the haying season, the increased labor involved in putting up hay by hand, shaking it out before it can be put on the wagon, and the possibility of using a hay loader has caused the disappearance of this method of curing to a large extent. Alfalfa is commonly cut, raked with a side delivery rake and loaded with a hay loader.

* * *

Is a hay tedder necessary in order to cure hay properly?

The modern use of the side delivery rake makes the use of a hay tedder unnecessary under average conditions. The tedding process knocks off a great many leaves and except in the case of very heavy stands of alfalfa or clover, is not recommended.

* * *

Can a hoist be used satisfactorily on the hay fork?

The use of a hoist on the hay fork usually results in a material saving of time and labor. In some cases, one man can operate both fork and the hoist and since the hoist also brings the fork back to the load, time and labor are saved. Home-made hoists can be constructed or they can be bought at reasonable prices and the available farm gas engine or electric motor can often be made to serve a dual purpose.

* * *

In putting hay in the barn, is it advisable to mow away each load as it is put in?

Of course, it is best to clear away each load of hay as it comes in, but in actual practice it is very seldom done. The usual practice is to allow each forkful to roll off and then as the mow fills up to fill in the corners. A hint in this connection may save some labor. A pole laid across the mow at the level of the eaves or bent just to one side of the center will break the forkfuls up as they drop and spread the hay more evenly over the mow.

* * *

Are slings as efficient, and can they be used in place of the ordinary harpoon fork?

In many cases where hay is short or where bundled grain is to be put in the barn, the use of slings is proving a great saving in time and labor. They have some disadvantages, as they break at inopportune times and must be laid out as the load is put up. However, in short hay where a harpoon fork does not work well, slings will enable the load to be cleared in half the time.

If there are any other questions regarding hay, machinery, curing methods or helps, we would be glad to answer them at any time.

With the A. A. Dairyman

Bull Pens for "Gentle" Bulls

EVERY dairyman realizes that bulls are dangerous, but most everyone says that his bull is "gentle as a kitten." The bull that is known to be dangerous is safe because he is carefully handled. Each year agricultural papers print many tragic accounts of men being killed or badly gored by so-called "gentle" bulls that unexpectedly turned on their owners. It is not cowardice to regard all bulls as dangerous. It is good, sound judgment.

There are many safe and practical bull pens in New York State, but there should be more. There are several good reasons why a bull should not be allowed to run loose in the pasture. It is dangerous because the bull may attack someone when he is least expecting it, or in a place where escape would be difficult. Furthermore, with such management it is impossible to keep accurate breeding records. Heifers get bred too young and cows get bred too soon after calving. It is perhaps even worse to stake a bull in the dooryard because by so doing the lives of the family are endangered.

After a man has gone to the trouble and expense of securing a bull which has been bred for production, it is unfortunate that just because the sire is getting unsafe to handle, he must be sold and replaced by a young untried animal. When the daughters of this sire freshen, a comparison of their production records with their dams may show him to have been a herd improver, but alas!—he has gone to the butcher's block. A bull pen is a solution to these problems.

Materials Grown on Farm

When planning to build a pen, one should consider safety, location, size, sanitation, durability, and economy. The pen shown in the illustration was built this fall on the farm of Fred Lewis and Son, Rock Tavern, Orange County, New York. Only last winter Mr. Charles Lewis was knocked down and badly bruised by their bull. Realizing that he was most fortunate to escape as he did, and also that such an occurrence might be repeated, Mr. Lewis and his son built a bull pen which now makes it unnecessary for them to handle the bull, except on rare occasions. For such occasions, a good stout steel staff is kept close at hand.

There is a steel box stall in a section of the barn separated from the part in which the cows are kept. The outside doorway of this stall can be closed by a heavy sliding door operated by ropes. A fence of green peeled poles was built adjoining this section of the barn, making a pen forty feet square. Ten foot posts were set in pairs, eight feet apart, and were put three and one-half feet in the ground. The poles were

laid horizontally between these posts and wired in place. The fence was made at least six feet high in every place, and the lower poles were placed high enough off the ground to permit a man to roll out under them. At one corner of the yard a breeding pen was built out, with a stanchion and breeding rack in it. The cow is brought in and stanchioned, then a tight plank door swings open against a post and is fastened. One hinge on the door is bolted upside down, making it impossible for the bull to lift it off the hinges. Since the door is solid and not a gate, the bull does not bother it.

Practically all the material used in building this pen came off the farm. The labor cost can be charged off as life insurance for the owner, and the owner has a good safe bull pen at very little cost. Besides the advantages of safety, a bull that gets the exercise which a pen of this kind provides is apt to be a surer breeder than a bull that is confined in a box stall. With a pen like this, both the bull and the dairyman feel more contented because neither bothers the other. Each has his place—the bull inside and the man outside the pen.—RAY BENDER, Assistant County Agent, Orange Co., New York.

Roosevelt Outlines Long-Time Land Plan

(Continued from Page 5)

scratch the surface along these lines and the possibility of diversifying our industrial life by sending a fair proportion of it into the rural districts is one of the definite possibilities of the future. Cheap electric power, good roads and automobiles make such a rural industrial development possible.

In other words, there are, without question many industries which can succeed just as well, if not better, by bringing them to rural communities, and at the same time these rural communities will be given higher annual income capacity.

It is for these reasons that I have spoken so definitely of a third and new type of American life—the rural industrial group. It is my thought that many of the problems of transportation, of overcrowded cities, of high cost of living, of better health for the race, of a better balance of population as a whole, can be solved by the States themselves during the coming generation.

I am very confident that during the next few years State after State will realize as we have begun to do in New York that it is a definite responsibility of government itself to reach out for new solutions for new problems.

* * *

Fred Lewis and Son of Rock Tavern, Orange County, New York, used home-grown materials in constructing this bull pen.

MORE SILO PER \$

Large volume . . . small overhead distributed over silos, coal pockets and aeroplane hangars—enable Craine, Inc. to sell for less or to give you more for the same money. Thus regular equipment with most Craine Line Silos includes:

Bail Hinge Door Fronts
Handiest and safest. Continuous fronts, if desired, for less money.

Gambrel Roofs
Add about 15% useful capacity to the silo.

"Y" Base Anchors
Hold like roots of a tree.

Circle Plates
Bind staves into one single mass.

The Craine Line alone gives you choice of wood stave, standard stave, triple wall, concrete stave, glazed tile and tapestry tile—as well as Crainelox Covers to repair all old wooden silos.

Send for Catalog describing all types. Also comparative prices.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk (Metropolitan area)	2.90	2.70
2 Fluid Cream		
2A Fluid Cream	1.66	
2B Cond. Milk		
Soft Cheese	1.91	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.30	1.10
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for June 1930 was \$3.00 for 3.5% milk and Sheffield's \$2.80 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

May Prices Announced

The Dairymen's League announces the following pool prices for May for 3.5% milk in the 201-210 mile zone.

Gross	\$1.54
Expenses	.06
Net pool	1.48
Certificates of Indebtedness	.10
Net Cash Price to Farmers	1.38
1930	1.82
1929	2.24
1928	2.01
1927	2.07

The Sheffield Producers announce the May cash price to producers for 3% milk in the 201-210 mile zone, as \$1.47½ per hundred, \$1.67½ for 3.5% milk.

	3%	3.5%
1930	\$1.94½	\$2.14½
1929	2.36½	2.56½
1928	2.14½	2.34½
1927	2.30	2.50

Retail Prices

Prevailing prices on Tuesday, June 9, for eggs and butter at retail in the New York metropolitan district.

Eggs	Range

Best brown, cartons	— @ 35
Best mixed, cartons	— @ 35
Best white, mediums, loose	29 @ 33
Large mixed, loose	25 @ 27
Butter	Range
Best in prints	29 @ 31
Best in tubs and rolls	27 @ 29

Butter Closes Easier, Lower

CREAMERY SALTED	June 13, 1931	June 6, 1931	June 14, 1930
Higher than extra	23 -23½	24 -24½	33 -33½
Extra (92 sc.)	22½ -23½	23½ -24½	32½ -33½
84-91 score	19 -22	19½ -23¼	27 -32
Lower Grades	16 -18½	16 -19	25 -26½

After holding fairly steady all during the second week in June, the butter market turned easier at the close on Saturday with prices a full cent under the close of the week previous.

The trade opened on Monday, June 8, at 23c for creamery extras, under liberal receipts and fairly full carryovers. On Tuesday the market steadied. Receivers were free sellers and there was a satisfactory volume of business all around. This condition prevailed on Wednesday, but buyers started to force the market and the situation became strained. An advance of ¼c was enough

to make itself felt. On Thursday the market went back to 23c under increased selling pressure and business was of good volume. Friday was no different from the rest of the week in that there was good buying for current requirements as well as for storage. On Saturday an unsettled tone was in evidence and prices dropped one half cent lower. Saturday is not much of a day for the market because of the fact the bulk of the buying for the current weekend is over on Friday.

There has been a more noticeable movement of butter into storage of late. Apparently the U. S. storage figures have shown speculators that the balance is favorable and they are willing to take a chance on the long hold. On June 1, U. S. storage stocks totaled 35,286,000 pounds whereas on June 1 a year ago U. S. storage stocks totaled 50,378,000 pounds. From May 1 to June 1 this year U. S. storage stocks increased 18,091,000 pounds, whereas during the same period a year ago stocks increased 27,421,000 pounds.

The fact that there has been a freer movement of butter to the freezers may be gathered from the recent week's report for the ten cities making daily reports. On June 12 the ten cities had in storage 30,663,000 pounds whereas on the same weekday last year the same cities held 33,522,000 pounds. From June 5 to June 12 storage stocks in the ten cities increased 7,519,000 pounds while during the same period last year holdings increased 6,675,000 pounds.

Active Trading in Cheese

STATE FLATS	June 13, 1931	June 6, 1931	June 14, 1930
Fresh Fancy	12½-14½	12-14	18-18½
Fresh Average			24-26
Held Fancy	21 -23	21-23	
Held Average			23 -

There has been a marked increase in the amount of business transpiring in the cheese market. There has been more activity during the past week than has been in evidence for a long time. It looks as though the speculative buyers are in earnest. Western and New York State makes of full grass cheese of all descriptions have been getting excellent attention. There is a very limited supply of well cured cheese available so that the cured cheese market holds particularly firm. Storage stocks are in the producer's favor and accordingly business is looking upward.

When the market came to a close on Saturday, June 13, a very firm tone prevailed and there was an unmistakable disposition in some quarters to ask fractional advances in prices.

The U. S. storage holdings for June 1 showed that the cheese market is statistically in a strong position. On June 1 holdings in the U. S. totaled 42,462,000 pounds whereas on the same day last year holdings totaled 49,172,000 pounds. From May 1 to June 1 this year storage holdings increased 1,920,000 pounds whereas during the same period last year holdings increased 9,848,000 pounds. Those figures look very encouraging to us. When we consider the statistical condition in the cheese market and the butter market as well, it surely looks as though the bottom has been reached. With the flush of the season in back of us it now looks as though the balance were in the producer's favor.

Gathered	21½-25	21½-25	27-32
	17½-21	18 -21	24-26½

For the first time in several weeks we are able to report slight advances in the nearby egg market. The supply of white eggs was not over-heavy during the second week in June and the market ruled firmer on the best quality of New Jersey and other fancy nearbys. The intermediate and lower grades have been meeting competition from the West and they have had a harder time of it.

The egg market as a whole was not any too good during the second week

in June. There was a slight falling off in receipts but not to the extent that many had hoped. New York is still storing an appreciable proportion of its receipts and accordingly, the speculative element offers the chief outlet. Local storage holdings are so heavy that many are beginning to view them with considerable alarm. As a matter of fact, the country as a whole has been storing eggs so far this June almost as rapidly as during the same period last year. However, current demands have been fair, most of the chain stores reporting very good distribution.

The June 1 report of U. S. storage holdings appeared to create a satisfactory reaction in the trade and apparently induced a better feeling. U. S. storage stocks totaled 7,881,000 cases on June 1 whereas on the same day last year holdings totaled 9,178,000. From May 1 to June 1, U. S. storage stocks increased 2,179,000 cases, whereas during the same period last year holdings increased 3,412,000 pounds.

In the frozen egg market U. S. storage stocks on June 1 totaled 106,623,000 pounds, while on the same day a year ago holdings totaled 106,904,000 pounds. From May 1 to June 1 this year storage stocks of frozen eggs increased 15,106,000 pounds while the increase during the same period last year was 30,240,000 pounds.

Current storage figures show that we are still holding inside last year's activities. On June 12 the ten cities making daily reports had in cold storage 4,794,000 cases of eggs, while last year on the same week day the ten cities held 5,171,000 cases. From June 5 to June 12 the into storage movement in the ten cities totaled 199,000 cases, while during the same period last year holdings increased 244,000 cases.

Live poultry values in general closed lower on June 13 than they did for the week previous. Additional unforeseen receipts hit the fowl market, a number of cars coming through in excess of those posted. There are other factors that also enter into the situation, one very important one being the cheapness of meats. The freight market on fowls was so overbearing that it dominated the express market. Broilers arriving by express appear to be dominating the freight market at the moment. Although express broilers have been arriving freely, supplies during the second week in June were not quite as heavy as the first week's receipts. Up to Friday, June 12 the broiler market was holding up fairly well. After Friday noon the price columns lost their meaning following the arrival of several loads late in the day. On Saturday, there were heavy carryovers from Friday in addition to a number of loads arriving on the morning of the 13th. Why these late arrivals have been coming in is hard to explain. Shippers have been warned times unnumbered to avoid these late shipments. It almost looks as though someone were purposely trying to break the market. It is a well known fact that the bulk of these late arrivals have to be carried over the weekend and only serve to keep the market in hot water. The quotations given above prevailed up to Friday morning officially. On Saturday it was very difficult, in fact quite impossible, to get any definite figures. It was a case of individual bargaining and prices lacked all forms of uniformity. The above quotations represent as near as we are able to determine the approximate level of the market.

Bean Market Weak

It is very discouraging to report the bean market. Practically every day's report is the same old story, "continued weakness." It is worse than a rainy

spell. Jumbo Marrows are bringing \$4.75 to \$5.50 with Average Marrows \$1 lower. Pea beans are quoted at \$4.25 to \$4.75 while Red Kidneys are \$6.75 to \$7.25. White Kidney beans are bringing \$1 less than Red Kidneys.

Fruits and Vegetables

Practically every day finds some fruit or vegetable making its first seasonal appearance on the market.

Perishables are meeting such variable conditions and are fluctuating so widely that it is almost, in fact absolutely impossible, to give any comprehensive report that is worth reading. What has happened last week is of no consequence. In the case of perishables the day to day situation is really what counts. There is no agency at the present time that can report the market as satisfactorily as the radio. Readers are urged to listen to the market reports each noon that give the immediate market conditions just as though the listener were right in the market.

Meats and Livestock

CATTLE—No steers offered. Supply largely cutter cows selling from 2.00-3.00, mostly steady. Odd head fat cows up to 4.50.

VEALERS—Mostly steady to strong. Good to choice nearby 8.00-10.00. Desirable southern 7.00-8.25. Common to medium 5.00-6.50.

LAMBS AND SHEEP—Lambs slow, weak to 25c lower. No choice Kentucky lambs offered. Bulk desirable Virginias 8.50-9.25, few 9.50. Common and medium 6.00-7.00. Sheep scarce, nominal.

COUNTRY DRESSED CALVES—Receipts were light during the week. Trading was slow all through. Small calves were light in supply and obtained almost as much as heavy weights which were more plentiful. Market closed steady. Fresh receipts per pound: Choice 11-12c; fair to good 10-11c; small to medium 8-10c.

LIVE RABBITS—Receipts light to moderate during the week. Demand slow. Market closed steady at 10-15c per pound.

34% O. P. Linseed Meal	28.50	44.00

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Hay Market Breaks

The hay market went all to pieces during the second week in June, when prices broke to all sorts of figures. The market closed weak. It is very hard to conceive a situation where rye straw sells on par with top quality timothy-clover mixed hay. Such was the fact however, during the week ending June 13. Offerings of hay were liberal both in New York and Brooklyn. At the same time demand has been extremely sluggish. Stocks have piled up to rather alarming proportions and in order to save demurrage charges prices were cut. Timothy No. 2 generally sold from \$21 to \$22. During the week there was no Timothy grading No. 1 offered on the market. No. 3 timothy brought \$18 to \$20. Timothy-clover mixtures brought from \$18 to \$22, while grass mixtures brought a top price of \$22 and then sold in small bales as low as \$17.

Farm News from New York

Recent Developments in the Wheat Situation --- County Notes

IN connection with the editorial on page four, it may be of interest to know some of the recent developments in the wheat situation.

Harvesting is starting in southern Oklahoma and movement of new wheat is expected to be under way before the

For some time American Agriculturist has been broadcasting every Monday, Tuesday, Wednesday, Friday, and Saturday, from 12:10 to 12:15 over radio station WHAM. We wonder how many of our readers are listening to these broadcasts?

We will welcome any comments on the programs particularly as to how they can be improved.

first of July. Kansas reports that the outlook has improved materially since the first of the month.

This is rather discouraging from the standpoint of the wheat grower, but is partially offset by the reports from Canadian wheat growing sections. In Saskatchewan especially, the Spring crop is looking very poor, very little moisture having been received so far in the growing season. Wheat is starting to head a month earlier than usual and consequently a light crop is expected.

However, unless there is a severe cut in this season's crop, the acreage sown will add to the already large surplus in this country.

Delaware Social Workers Organize

DURING the past year, Delaware County has been organizing health, social, and educational work to correlate their activities for the betterment of the county. At a recent meeting representatives of 22 organizations interested in the project met at Delhi and formed a permanent organization to be known as the Delaware County Conference of Social Work.

Directors of the new Conference are G. V. Barry, President; E. O. Harkness, Vice-President; J. A. Lennox, Secretary-Treasurer; J. J. Farrell, W. A. Humphries, Isabell Foreman, Elizabeth MacDonald, executive committee.

Mortimer L. Schiff

"THE Boy Scouts of America have lost more than a friend and superior, through the death of Mortimer L. Schiff." That is the way that Dr. James E. West, Chief Scout Executive of the Boy Scouts of America, expressed the sentiment of the nation's scouting on hearing of the sudden death of President Schiff at his home in Oyster Bay.

Mr. Schiff was unanimously elected president of the Scouting Movement in America only a month ago. Scouting has lost a real leader.

Future Farmers Hold Rally

THE second annual spring rally of the North Country was held Saturday, June 6th, at Hawk's Haven, between Malone and Chateaugay, with the Chateaugay chapter of the Young Farmers Association acting as host to the Brushton, Chazy, Malone, Massena, Madrid, and Gouverneur associations.

Gouverneur captured the track and field meet and the horseshoe pitching contest, thus entitling them to the silver cup presented by the host.

During the noon hour, a business meeting was held, at which time Harry Hitts was elected vice-president of Northern New York district of The Future Farmers of America for the coming year to succeed the present vice-president, Darcy Goodenough.

In the afternoon, a baseball game between the East Section, composed of Brushton, Chazy, Chateaugay, and Malone, and the West Section, namely Gouverneur, Madrid, and Massena was

played. The West Section was defeated by a score of 8 to 6.—Arthur Y. Miner, Gouverneur Young Farmers Club.

New York County Notes

Cattaraugus County—The summer session of the County or Pomona Grange was held with Randolph Grange in the Community Hall on June 5th and 6th. The high lights of the two-day and evening session were an address by Senator L. G. Kirkland, a discussion on "How Can We Hasten the Day of Good Roads to the Good Farmers on the Hills and in the Valleys of This Great Empire State?" led by Professor George W. Boyce, Elkdale, and a stereopticon lecture showing two hundred and seventy-five views of the Grand Canyon and Yellowstone National Park, the "Wonderland of America," presented by Professor W. L. Markham, Jamestown. Of special interest was a demonstration by the Juvenile Grange of Randolph, the youngest of three in the county, organized the past year. Of particular interest to farmers from a business standpoint was the address Saturday afternoon by H. E. Babcock, Ithaca, manager of the G. L. F. Exchange. The session closed with a fine presentation of degree work exemplified by the ladies of Cattaraugus Grange.

Winners in the county kitchen improvement contest sponsored by the Home Bureau are: Mrs. Luther K. Borden, Otto, first in the kitchen planning contest, and Mrs. George Rose, Gowanda, first for actual improvements installed since January 1. The honor, according to Miss Caroline Pringle, entitles them to a year's free membership in the organization and the privilege of competing in the State contest in charge of Mrs. J. K. Thorne, Skaneateles, to say nothing of the labor saving to their homes. Mrs. George Leach, Randolph, was County chairman in charge of the work.—M. M. S.

Cortland County—Miss Beatrice Reis of the Albany Health Department, has been in the County giving a series of lessons in home nursing. In some towns she has worked in cooperation with the Home Bureau. This work is partially the result of the setting up of six public Health Centers in the County during the past three months. The Centers at present are located in Cortland, Marathon, Homer, Truxton, Cincinnatus, and Cuyler.

At the annual meeting of district 14, Dairymen's League Cooperative Association, held in the Court House Auditorium in Cortland, on June 1, Clifford Nadler of Homer, won the prize speaking contest with his talk on "Marketing Farm Products."

Fred Rafferty of King's Ferry, was awarded second prize for his talk "The Future Farmer."

Representatives of the Agriculture Departments of six high schools located in Cortland, Seneca, Tompkins, and Yates Counties took part in the contest. Over three hundred were present at the meeting.—I. B.

Franklin County—A new feature of the Malone Fair this year is to be a dog show, by the request of many interested people. It is expected to be one of the most popular exhibits of the Fair, since nearly everyone is fond of and interested in dogs.

Under the Ayrshire Herd Test rules, a seventeen cow herd of Ayrshires owned by Perham Brothers, this County, was third highest in production in the United States, during May, securing an average of 984 pounds of 4.11 per cent milk, 40.40 pounds of butterfat. Every cow in the herd that had once freshened, was included in computing these figures.—Mrs. W. R.

Ontario County—Here in this great cabbage country quite a few cabbages have been set out, mostly from Southern plants. Growers that had screened beds also have early plants, but with the rain of the past two days, it will be a few days before fields are in shape to set. A light crop of beets and carrots are being put in by the farmers of this section, due to the poor returns of the past few years. Things look more pros-

perous this year than usual, and if good crops are any help in bringing back good times, Ontario County will do its share.—P. A.

* * *

It looks as if the usual acreage of cabbage would be put out if the ground can be worked.

Apple trees of all varieties made a good blossom. Some are spraying, but not as many as usual. Farm produce of all kinds is very low in price. Wool sells at 10 cents per pound. Eggs have risen a trifle, from 15 cents to 19 cents per dozen, but they have to be graded.—E. T. B.

Madison County—The growing season of crops is at hand. We see it in the fields in the early gardens, and the lawns. The season is beginning auspiciously in old Madison County, with plenty of rains, no frosts, and a good outlook for fruit. Of course, produce is low. Eggs, 15 cents, butter, 30 cents or less. The cheese factories are in operation with the surplus milk, and prices are low. The optimist sees plenty ahead, the pessimist sees small profits. Let's keep up courage and do our best.—Mrs. C. A. P.

Sullivan County—With plenty of rain, hay is a promising crop, oats look good, potatoes and corn are just coming up and gardens are fair. Eggs are 20 cents a dozen. Butter sells from 18 to 25 cents a pound. Hired men are receiving from \$30 to \$40 a month and board. Pigs bring \$4 to \$5, four weeks old. There is a very poor call for calves, but registered stock is high. Many schools are closed for the summer vacation.—Mrs. P. E. R.

Western New York Notes

The Cattaraugus County farmers annual picnic to be held at the County Fair Grounds, Little Valley, June 27, will feature the yearly battle of horseshoe pitchers, to determine the County champion.

The annual Field Day of Erie County farmers will be held in the Erie County Fair Grounds, on Saturday, June 27, with all farm organizations in the County cooperating. Costumes will be one of the requisites of attendance, all offenders to be haled into a weird court, where the maximum fine will be 10 cents. Prizes will be awarded for the best costumes, both for individuals and groups, children and grown-ups.

The Eden High School band, which won first place in their class in the

Does Your Family Boast of Five Generations?

FOLLOWING a recent announcement, our subscribers who have five generations in the family have been sending us pictures of the group. You will remember that in a recent issue we mentioned that we would like to reproduce in American Agriculturist, as many of these pictures as we have space for. If you have five generations in your family will you not send us a picture of the group? All pictures will be cared for and returned to their owners.

Western New York District, and second place in the state-wide competition, will play. The band is composed of about thirty pieces, and as a result of their winnings is the outstanding high school band in Western New York.

At Genesee County's 4-H club annual plowing match, James Chapman of Alexander, won in the class for boys under 16 years of age, and Leslie Lamb of Corfu, was winner of the older boys match.

More than six hundred rural school children, teachers, and trustees, representing thirty-six schools, attended the rural school Field Day, recently held at Ten Broeck Free Academy, Franklinville.

A series of cattle thefts in Genesee County, dating from last Fall, is believed to be cleared up by the arrest of four men who, it is reported, have confessed to the thefts.

Two Wellsville, Allegany County, men recently ate a pheasant dinner which, when the Game Warden got wind of, cost them \$27.50 each, on a charge of violation of Section 182 of the Conservation Law.

The cabbage production forecast, that is of special interest right now, with many fields being set, is not too encouraging. Early states have had a bumper crop forcing prices to low levels for this time of year. A twenty-two per cent increase production for the intermediate states is predicted, although the acreage is about the same as 1930. Unless the acreage in the late states is cut materially, it looks as if we will be faced with another year of low cabbage prices.

The A. A. Yellowstone Trip

August 1 to 10, 1931

MORE THAN 800 A. A. readers have written us asking for information about the A. A. Yellowstone trip. A considerable number have definitely decided that they are going and have sent in their checks and reservations. If you would like full information without the slightest obligation to you, just fill out the blank printed below and send it to the Tour Manager, American Agriculturist, 461 Fourth Avenue, New York City. Here is a little information about the trip.

What is it? A personally conducted tour of American Agriculturist readers to Yellowstone Park. The original cost includes all expenses even down to tips so that you will be relieved of every responsibility at a lower cost than you could take the trip for alone.

When will the trip be taken? Our special train leaves New York City August 1, on the New York Central. It will stop at other points in New York State. Of course, the farther you are from New York City the lower the cost will be. The cost does not include your railroad fare to the nearest stop on the New York Central.

How will we go? We will have a special train of pullman sleeping cars, a dining car, and an observation car. Numerous side trips will be taken by automobile and bus.

Who is going? You, your family and friends, together with one of the editors of American Agriculturist and a personal representative of the railroad. For further information fill out the coupon.

Tour Manager, American Agriculturist,
461 Fourth Ave., New York, N. Y.

I am interested in the A. A. Yellowstone trip and without any obligation on my part, would appreciate receiving full information about the A. A. Yellowstone trip, including the cost.

With the A. A. Poultry Farmer

More Turkey Raising Experiences

SINCE my turkey story was published in American Agriculturist I have received so many inquiries about my method of raising turkeys that I have been asked to write another short article explaining my method more explicitly. I have received several letters from A. A. readers containing money with requests that I send them "London purple." Of course, I returned the money. Please do not send to me for this article as my druggist tells me it cannot be sent by mail. He cannot understand why you cannot buy it from any druggist.

I have had a great number of inquiries about the mash. If I have plenty of cottage cheese I never use mash, but usually I have to substitute the mash for the cheese. Cottage cheese is the best all around turkey feed I ever tried and I have experimented on almost every kind. Those who have this are very fortunate. The poults will eat but very little for the first four or five days. In fact, this spring I have had considerable trouble teaching some of them to eat at all. Whenever I can, I place a chicken hen with the poults a few days to teach them to eat.

Schedule for Feeding Poults

The following is my feeding schedule for 25 poults. First day's feed (after 48 to 60 hours old)—Morning, one pint sour milk. Place sand and charcoal mixed in the house at this time and leave it there all the time. Night, one tablespoon cottage cheese.

Second day to two weeks—Morning, one tablespoon cottage cheese, one pint sour milk. Noon, the same. Night, the same. Begin, when the poults are five days old giving epsom salts at the rate of 1 teaspoonful twice a week to 25 poults. I give mine on Wednesday and Saturday evenings, never missing a night until they are sold. Gradually increase the amount until by October 1, they get one-eighth pint.

Two weeks to four weeks.—Gradually increase the cheese until a pint is given at a feeding twice a day. If their crops are full do not feed so much. Give all the sour milk they will drink. At this time, if I give mash, I begin gradually mixing a little in their feed. I use a starting mash with yeast and oil. Place oyster shell before them and leave until selling time. They will consume quite a lot of this article.

Four weeks to the first of October—As I said before, if I have the cheese, I prefer this to any other feed. If not, I gradually mix in their feed wheat, rolled oats, and mash, feeding only at night. Of course, they also get sour milk. I use my judgment if their crops are full and just give them sour milk.

Finishing the Birds

October first to selling time—Never feed new corn as this causes indigestion. I either fatten on old corn or wheat or both mixed. Begin gradually, taking three or four weeks to make the change in feed, as an abrupt change usually proves fatal at any time in a poult's life. After November first I feed twice a day to twenty-five turkeys, about one gallon of feed at a time. As I said before, never miss a dose of the epsom salts. Never feed on the ground. I feed in wooden troughs made like sheep troughs. Whenever it is rainy during the summer and fall I give the turkeys 1 teaspoonful of turpentine once a month (to 25 poults). I also give 1 tablespoonful baking soda once a month. This keeps them healthy and eliminates worms.

I do not have special equipment to raise my birds, but let the turkey hens care for them. Of course, I stay on the job the first three months and if a storm approaches get them in their house as a severe wetting at this age usually proves fatal. It means work but

what doesn't mean work on the farm these days?

After they are three months old a warm rain will not hurt them, but I have had to get them in their house when they were full grown if we have a long cold rain as they will chill if wet thoroughly.

Another important point is to keep everything sanitary. Keep them away from chickens; sprinkle lime where the turkeys run, and around their roosting place. Every effort should be made to keep the soil sweet and clean. This is particularly true of the soil on which the birds are fed and where they roost.—MRS. MINNIE L. GORDON.

Look Out for Mites!

LICE live on poultry during their entire lifetime. They are sucking insects that feed upon the tissues of the bird. The mite belongs to the spider family and crawls upon the birds at night to feed upon them, but spends the daytime in the cracks and crannies of the poultryhouse. The louse problem therefore must be solved by treating the birds, the mite problem is solved by treating the house.

The "red" mite isn't red at all. It is a grayish or whitish insect except when it is full of blood, then it turns a brilliant red color. When a mite is hidden away in the cracks or crannies of the poultryhouse with little or no blood in its "stomach" it is very difficult to see. The best way to inspect the house for mites is to place the hand on the wall or in the nests allowing it to rest there for a few minutes. The warmth of your hand will bring the mites out if any are hiding.

One way to kill mites is to spray their hiding places. In fact this is about the only way in which they can be totally destroyed. A tablespoon of "Black Leaf 40" to a gallon of water to which enough soap has been added to make a suds gives a thoroughly effective spray. This should be sprayed in the cracks and crannies of the house from top to bottom and throughout the entire inside of the house wherever mites can find a lodging place. Another method is to paint the roosts with used crank case oil.

Fruit and Vegetable Law Has Teeth

(Continued from Page 3)

defendant mailed a postdated check which was also returned and thereafter another check was returned by the bank without payment for the reason that the date thereon had been altered. Since that time the receiver has refused to make any settlement with the shipper.

The next charge against this firm comes from Florida. They received seven cars of oranges on consignment for which they have refused to remit the shipper the net proceeds of the sale amounting to \$3,510.32. Another shipment from South Deerfield, Mass., concerning five cars of onions was investigated. It was found that the firm was not keeping records which showed clearly how the produce was marketed, which is another violation of the law. In view of these flagrant violations of the Perishable Agricultural Commodities Act, Acting Secretary of Agriculture, R. W. Dunlap, has revoked the license of this firm, which automatically takes away their right to do a commission merchant's business.

Another evil of the produce marketing business that comes under the Perishable Agricultural Commodities Act was thoroughly aired in Philadelphia early in May. This involved an F.O.B. buyer, who apparently welshed when the market broke and he faced a loss on a legitimate purchase. At the hearing before Judge Gillman of the office

of the solicitor of the Department of Agriculture, it was brought out that a Philadelphia firm had bought from the American Fruit Growers, Pittsburgh, two cars of California tomatoes and one car of Florida grapefruit. All three cars were purchased on an F. O. B. basis and were shipped to Philadelphia with draft attached to bill of lading. According to the testimony presented by the shippers through their representative K. B. Fogg, when the American Fruit Growers, Inc., refused to deliver the fruit until the draft was paid, the defendant turned the car down and refused to accept it. On a resale the shippers lost \$206.84 on the F. O. B. contract price.

When the two cars of tomatoes arrived in Philadelphia it appears that the market had also dropped, and, without any legal excuse, they too were refused. On the resale the shippers absorbed a loss of \$1094.12.

The American Fruit Growers sought reparations and asked for \$1,201.06 damages. In view of the alleged attempt at violations of the Perishable Agricultural Commodities Act, the U. S. Department of Agriculture has sought to make this a test case, and on its outcome hangs the fate of nearly 500 similar complaints. To those who attended the hearing and followed the testimony, it appeared that this case represents a common practice followed by a group of speculators who are always in the market. They are ready to buy any commodity that looks profitable. If the market is up they take the car and pocket their profit. If the market is down they reject the car on some excuse and the shipper has the expense of a resale and swallows the loss.

Producers everywhere will tell the same story. They have been through it dozens of times, especially if they are large shippers but this is the first time that they have ever had the opportunity to see a case brought into court backed up with the evidence that the department officials had collected. The case also assumes national importance because of the standing of the shipper, the American Fruit Growers, Inc., Pittsburgh. The fact that they have taken the initiative in attempting to test the validity of the law, backed up by the legal staff of the U. S. Department of Agriculture, gives other shippers the assurance that, if the charges are true, the purely speculative type of merchant is to be driven out of the produce field and the job of distributing perishables will be left in the hands of legitimate buyers, dealers, and distributors who can render a real service to growers and shippers.

June Poultry Notes

KILL that rat! A constant campaign should be waged against this pest. One rat in a brooder house of chicks will kill eighty to a hundred chicks in one night. He will kill just for the pleasure of killing. Make your poultry house rat proof. One rat in the laying house will consume at least one dollar's worth of feed in a year. One dollar's worth of feed will keep a good hen in laying condition for over four months. Red Squill powder placed on suitable food baits is an effective poison for killing rats and is harmless to other animals.

Keep up egg production. Often when eggs are low in price there is a tendency to neglect the laying hens. Make the house comfortable. Perhaps there is need for more ventilation, litter may be needed, or should be renewed, water pans may have become empty. Check the mash hopper feeding space to see if you have provided one foot of hopper space for every five hens.

Poultrymen should remember that clean land is as important in the rearing of poultry as clean buildings.

The Story Thus Far

Jim Stuart, manager of a Hudson Bay Company trading post, rescues Aurore LeBlond from almost certain death when her canoe upset in a storm on the lake on the shores of which Jim's camp is located. Aurore is a daughter of Jim's business rival; but despite this she and Jim are attracted to each other. One of LeBlond's lieutenants, Paradis, becomes extremely jealous of Jim.

Jim and Aurore have a secret place on an island where they leave letters for each other. Paradis intercepts one of these letters and surprises Jim when the latter visits the spot. Paradis threatens to kill Jim but finally decides to take him to LeBlond. Jim gives Paradis a ducking in the lake and a warning.

Jim and his Indian aide, Omar, leave for headquarters to call on Christie, Jim's superior, who is dissatisfied with the trade balance at Jim's post. He gives Jim one year to make good. Christie's daughter, Mary, is more than casually interested in Jim.

On the return trip, Jim and Omar are fired upon from ambush. They find an Indian who confesses he fired the shots and that he was forced to do so by Paradis. Jim and Omar take the Indian to LeBlond's camp where he tells his story in the presence of LeBlond and Paradis.

As a result of Jim's story LeBlond promises to send Paradis out of the country. Jim and Aurore arrange for another meeting.

* * *

On went the boats, silently, side by side, breaking the mirror of the stars with the ripple from their bows. Two hours passed and the violet heavens greyed while the stars dimmed and faded. Then, with dawn, fingers of opal and rose and pearl streaked the ash-grey sky above the purple eastern hills. Shortly, the lifting sun rimmed the ridges with fire, and mist left the lake to hang for a space before it dissolved, veiling the spruce tops like smoke. Before sunrise two canoes were landed widely apart on the large island, drawn up, and hidden from sight in the "bush." Then, eating the cold breakfast they had brought, Omar took his rifle and the binoculars and crossed the island to watch the post. If Paradis followed her canoe that morning, the half-breed promised himself, LeBlond would be relieved of his promise—unless he wanted to send a dead man to the Nipigon.

To avoid the chance of being seen crossing the lake and reported by a canoe from LeBlond's, visiting the gill nets set between the islands, Jim had started under the stars. But now the impatient trader had hours to wait until he could hope for the coming of Aurore LeBlond's canoe. So he dropped his clothes on the sand beach and cooled his impatience with a long swim. Beyond the shallows the water was cold, but he hardly felt the temperature as his powerful arms and legs thrashed the still surface. She was coming to meet him—this glorious dark creature who had so valiantly fought death over miles of wind-driven sea, only to laugh at it. In her pride, she had turned her flushed face and clouded eyes from him that he might not see; but he had seen. Miracle though it was, those hours at Sunset House with this girl of the cities had wrought their mutual spell. The humble fur-trader, Jim Stuart, had reached her—if not her heart, her senses. And she was coming to him

here on this lonely island to say goodbye.

Jim landed and leisurely put on his clothes. She had asked him to be at the sand-beach as early as he could reach it, but had named no hour. Then his high spirits fell at the thought of what her failure to come would mean to him—this last chance of seeing her before she went back to the world outside and forgot the man immured in the northern forests who, for a moment had set the blood pulsing in her throat.

Time Passes Slowly

He looked at his watch. Seven o'clock! Too early yet! It would take her an hour to paddle from the post. Then he saw a canoe in the distance.

When the boat had approached to within a half-mile Jim knew, from the stroking, that the craft was paddled by women. It was she.

Presently the bow paddler waved her hand to the man who restlessly walked the shore. The canoe drifted nearer. For a space, he watched the blade of Aurore, driven by her round arms, flash in the sun; then shortly, her laugh reached him.

"Good morning! You are early, Monsieur Stuart," she called.

"I have been here for hours," he said, "waiting for the dawn, and now, she has come."

"Very pretty!" With a flash of white teeth she smiled into his eager face as he drew the boat in to the beach and gave her his hand, while the eyes of the Indian girl in the stern snapped with excitement at this secret tryst of LeBlond's daughter and the trader from across the lake.

Then, as she stepped to the sand, Jim's eyes which had not left the radiant dark face, noted the tan linen knickers beneath the white blouse.

"Gibodiegwason!" he grinned. "You wore them in memory?"

Her dusky eyes lit with raillery. "Yes, in memory of our meeting—and because they wash."

They stood on the beach looking at each other like runaway children, as the Indian girl paddled the canoe discreetly up the shore.

"Do they shock you, mon ami?" she asked, noting the amused smile as his approving eyes swept her graceful legs encased in silk stockings.

"No, they are most becoming. I was thinking of Sarah's horror last night, when I told her you wore silk stockings. She almost choked with surprise. 'Nia! n'go!' she gasped. 'She put seek on her foot?'"

"The poor old soul!" The girl rocked with laughter. "So she was horrified at the thought of silk stockings? I'm just going to send her a pair for Christmas. What's her size?"

Jim's face sobered as he gravely considered the matter. "Good lord, I should say the largest they make."

"Did any one ever tell you," said the girl, her eyes suddenly serious, "that you have a most dangerous smile?"

The blood leaped to his bronzed face. "I hope—you find it so," he stammered, confused at the suddenness of the attack.

"I might," she said, with a curl of a red lip, "if you were more polite."

"Polite?"

"Yes. You haven't asked me to sit down, and I'm tired from hard paddling."

He glanced around the strip of sand beach, fringed with alder, then shook his head ruefully. "I'm afraid there's only the beach."

"What's the matter with that?" And she sat down, took a cigarette from a small case and started to smoke, her dark brows contracted, her eyes turned from him where he sat. At last she spoke.

"When a man tells a girl she means something to him—that he wants to see her," she began, "and in the same breath says he's going away so he can't see her, what is the poor girl to infer?"

"That the man is a victim of circumstances," Jim answered.

She shook her dark head. "No, that he can't want to see her very much or he'd stay."

"Do you believe that?" he demanded, leaning impulsively toward her.

She met his look squarely, quizzically; then asked: "Can't you wait until September? I might not go out of your life—if you'd wait—I'd be sure then."

"Sure of what?" He was very near her now. The arm on which he leaned visibly trembled with his effort at control. But her dark eyes were now cryptic and he fought down his emotion. Could it be that she had come out here to play with him—amuse herself? At the thought his bronzed face filled with blood.

"Sure of what?" he repeated roughly.

As she watched the tenseness of his corded neck, the set jaw, the passion in the grey eyes, slowly her mouth curled with the mocking smile he knew. "Why, I'd be sure you wanted to see me again," she said, and clasping her knees in her hands, rocked gently back and forth, as the face of Jim Stuart darkened with anger.

So it had been acting, after all, he thought, her face, her eyes, her voice, yesterday at the post?

He got to his feet and walked to the water's edge with his bitterness. Fool, he had been, to allow this girl to draw him on—play with him, to lighten the dullness of her visit to the forests. She had wanted to make him lose his control—make love to her; she had seen him tremble with his desire to take her in his arms. He had thought her sincere, under the armor of her railery—her daring manner. But now that he was wrong, he would not whimper. He would play out the game. He turned to the girl watching him curiously from the sand.

"I wanted to ask you," he began as she looked up at him, the trace of a smile at the corners of her mobile mouth, "what Paradis told you about our meeting at the split rock. He followed you there and found your note; then ambushed me with a gun, and started to take me to your father's place, when I upset the canoe and gave him a lesson."

Aurore's laughter echoed from the forest behind her. "He said that he had beaten you with a stick and you had promised never to look at me again."

"You believed him?"

"What, believe Paul Paradis?" she protested. "I happened to know that Mr. Jeem Stuart, having looked at me once, would desire to look again, and our Paul would not stop him. Beat you with a stick—our pretty Paul? Absurd!"

"Thank you. I did want to look again." And he again sat beside her, now steeled against the wiles of her sorcery.

"Now will you tell me why you go away?" she asked quietly. Her dusky eyes were serious.

"Because my duty to my employers demands it."

An Explanation

"Have you ever heard of that word—duty, Miss Aurore LeBlond?"

"Yes, I have heard of it, Mr. Jeem

American Agriculturist, June 20, 1931 Stuart, but I am wondering if its demands are greater than those of love."

He turned on her in amazement to find her troubled eyes seeking the distant ridges. Here was a new mood.

"My place, as you've doubtless heard your father say, has not been successful. This is my last year here—unless I can make it pay. There's no room for failures in the fur trade." With mouth set stiffly, Jim gazed away across the rippled surface of the lake. Stuart, he mused, the man who had made two failures at Sunset House. One, all the trade would know; the other—only Aurore LeBlond and his heart.

He filled his deep chest with the spruce-sweet air; then expelled it as something warm touched his hand. He looked down. It was the hand of the girl beside him and the dark eyes which met his shone, but not with mockery.

"I understand," she said. "It was just to pass the time—until your duty called you away."

Wide eyed with surprise he met her dark gaze as she withdrew her hand. But in the depths of her unwavering eyes lurked no trace of guilt. Confused, electrified by her touch but suspicious, he passionately rejoined: "You accuse me of that—you, who are going so soon—who amused yourself with a poor devil of a fur man?"

Her face flamed as he choked out the words. With a little cry she faltered: "Ah, you do—you do love me—Jeem Stuart!"

As the sun destroys mist, her clouded eyes—her voice, banished the suspicions of the bewildered Stuart. With a quick movement he had her in his arms.

"And you love me—Aurore!" he murmured, breathing in the fragrance of her hair as he crushed her fiercely to him.

With a deep sigh she turned in his arms and flung back her head. Taking his bronzed face between her hands, the glowing eyes of the girl lifted to his.

"Look, you doubter! Are you satisfied?" His hungry lips crushed back her words.

Oblivious to Surroundings

There they sat on the shore of the Lake of the Sand Beaches, the man of the forests and the girl of the city, oblivious of the gulf which separated them; forgetful of the fact that long months would intervene before the return of Aurore to Bonne Chance. The sun swung high overhead, ignored by the intoxicated Stuart and the headstrong daughter of Louis LeBlond. Once the solicitous Ojibwa girl returned with the canoe, to be sent paddling madly back up the shore. Hours were but minutes to the two who had found each other only to separate.

"The miracle of your wasting your lovely self on a fur trader!" Jim was repeating.

"My father is a fur trader," she reproved. "And I thought I was being rescued by a Viking that day you lifted me into your canoe. Oh," she said, with her contagious smile, "will you rescue me again, some time, Jeem?"

"You're in great danger, now, where you are," laughed the enraptured Jim. "I'll have to rescue you from the sand." And he swung her to his lap, that he might run his fingers through the raven ripples of her thick hair; marvel at the smoldering depths of her changing eyes; touch with his lips the satin texture of her skin.

So they spent the golden hours, hardly stopping to lunch from the basket Aurore had brought. And then, as the sun swung toward the western ridges, with a pang, like the stab of steel, Jim realized that his dream was near its end. For it all seemed unreal,

Aunt Janet's Corner

Good Books Fortify Against Loneliness

IT is not always possible to leave money as a bequest to children, but it is possible to develop in them attitudes and tastes which will add to or subtract from their sum of human happiness as long as they live. A taste for reading needs to be nourished and can be very easily squelched so that it is permanently destroyed. There are practically no places left on the earth's surface where a man or woman may not enjoy a good book. Other comforts and other friends may flee, but the thoughts of great men which have been committed to book form can always be sought for inspiration.

Sir John Herschel is quoted as saying, "If I were to pray for a taste which should stand me in stead under every variety of circumstances, and be a source of happiness and cheerfulness to me through life, and a shield against its ills, however things might go amiss and the world frown upon me, it would be a taste for reading. Give a man this taste and the means of gratifying it, and you can hardly fail of making a happy man, unless, indeed, you put into his hands a most perverse selection of books."

It seems fitting that this thought be emphasized occasionally because we Americans seem bent upon doing everything else but thoughtful reading. We depend so much upon ready-made entertainment and amusement that there is real danger that we shall forget to do some active thinking of our own.

—AUNT JANET.

Kermis Plays Well Received

ALL who have attended the Farm and Home week or who have been students at Cornell University, know that Kermis is the student dramatic organization which has been interested in developing rural dramatics. Until the past year, they have offered prizes to any student in the New York State Colleges of Agriculture and Home Economics who would write a successful

play which dealt sympathetically with some phase of country life. The 1930 contest however, broadened its scope to include contestants from United States and Canada. Due to this fact, and to the interest of Mrs. Henry Morgenthau, Jr., wife of the publisher of American Agriculturist, in giving ad-

Smart and Wearable

3128

DRESS PATTERN NO. 3128 is up to the minute in cut and oh! so comfortable. The V-line of the capelet collar is accentuated by the V-line of the flounced skirt. Made of printed chiffon, cotton mesh, eyelet batiste or shantung, this dress would be ready for almost any occasion. The pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42-inches bust measure. Size 36 requires 3½ yards of 35-inch material. PRICE, 15 CENTS.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with correct remittance in stamps. Add 12 cents for one of the new Summer Catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry Street, Poughkeepsie, N. Y.

ditional prizes, about seventy original plays were submitted in the contest, coming from Massachusetts to California, and Georgia to Quebec. Of the number submitted, the following were awarded prizes: "The Catalogue"—\$125, "The Light"—\$60, "This Ghost Affair"—\$30, "Old Scotch"—\$15.

The first three of these plays were well received when presented by members of Kermis at the laboratory theatre at Cornell University on May 8 and 9.

The rules of the contest governing the writing of these plays stated that plays should deal sympathetically with some phase of country life and might be tragedy, comedy, drama, or farce; the plays should be one act, and play in thirty or forty minutes; the plays might be published or printed by Kermis of the New York State College of Agriculture and Home Economics, and

It's a wise woman who sniffs at this bargain

Sniff! Sniff!—that's all it takes to discover a real bargain in washing value!

For your nose will tell you that there's naptha in Fels-Naptha—plenty of naptha, the dirt-loosener, combined with good, golden soap. There's your bargain in washing value! Not more bars, but more help. The extra help of two busy cleaners. Golden soap and naptha working together—loosening stubborn grime—and giving you sweet, clean clothes without hard rubbing on your part.

Fels-Naptha works so quickly that your hands are out of the water sooner. Each big bar contains bland, soothing glycerine, too. And remember—you don't have to pamper Fels-Naptha.

It washes the way you want to wash. It gets right to work in tub or machine. In hot, lukewarm or cool water. Whether you soak or boil. Try it for easier household cleaning, too. Ask your grocer for Fels-Naptha to-day!

Special Offer—We'll be glad to send every user of laundry soap a sample bar of Fels-Naptha and a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use the chipper and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only 4 cents in stamps to help cover postage, and we'll mail you the chipper and sample bar without further cost. Write today. Fels & Company, Phila., Pa. Dept. 1-6-20.

THE GOLDEN BAR WITH THE CLEAN NAPHTHA ODOR

For Small Ladies

3126

LITTLE GIRL'S DRESS PATTERN NO. 3126 is dainty and charming besides being the acme of comfort for hot summer days. Dotted dimity, swiss or voile would be cool and attractive. Candy striped cotton broadcloth or percales with the figures of wee animals romping over it would delight the small lady's heart. The pattern cuts in sizes 4, 6, 8 and 10 years. Size 8 requires 2½ yards of 35-inch material. PRICE, 15 CENTS.

might be played without royalty by amateurs within New York State; the competition closed December 1, 1930; suitability for production by amateur clubs should be considered; simplicity and ease of staging, characters not too difficult for amateurs should be chosen.

As was planned by the committee on the contest, "The Catalogue" is now being made available for the public and can be produced royalty free within a few weeks. Twenty-five cents will be charged for a mimeographed copy of the play which may be had from the Rural Social Organization Department at the New York State College of Agriculture, Ithaca, New York. "This Ghost Affair", "The Light at the Cross Roads", and "Old Scotch" will be available also at a later date.

The judging committee of the Kermis play-writing contest was composed of Mrs. Henry Morgenthau, Jr., Barrett Clark of the Samuel French Company, Paul Green, the Playwright, and Professor A. M. Drummond, of the Dramatics Dept. at Cornell.

Commissioner Lynch Discusses Three-fourth Year License

(Continued from Page 2)

tioned in certain subdivisions, it is found that those subdivisions relate to trailers and not to motor vehicles. Under the language of the bill as drawn, free registration could not be granted omnibuses, suburban cars, light delivery cars, and trucks owned by cities, counties, and villages. This could hardly be defended. It eliminated also ambulances from the free registration list but obviously this was a matter of legislative policy.

"For these reasons, it would seem that this particular bill should have been vetoed.

New Bill Can Be Presented

"If serious injustice has been done to the people of the rural communities and if it be deemed highly desirable

to provide for the three-quarters registration fee, a proper bill to that end can be drawn and submitted to the Legislature. The need for the change in the present statute did not appear to be so great as to warrant the approval of this particular bill.

"This Department gave very careful consideration to the terms of this bill and the conclusion was reached that

CARD TABLE COVER NO. B1551 comes ready made of fast color rayon, decorated with contrasting two-tone woven bands. Each cover is finished with elastic strips at corners for slipping over table ends. This number is stamped for embroidery in the popular cross-stitch silhouette, using black floss of medium weight. Cover only, \$1.00. Order from Embroidery Department, American Agriculturist, 10 North Cherry Street, Poughkeepsie, New York.

the little good which it might accomplish was so greatly over-balanced by its objectionable features that the bill should not be enacted into law.

"I think it would be well to give publicity to the facts stated herein equal to that given the editorial in question."

Very truly yours,
THOMAS M. LYNCH,
Commissioner of Taxation and Finance.

Before putting garments in the washing machine, spread very soiled parts, such as neck and shirt bands, on a flat surface and rub with a well-soaped brush.

Time taken to read the advertisements in AMERICAN AGRICULTURIST is time well spent—for there is no better way to keep well informed on new things on the market, what to buy at what price and where to go to get what you want. When you answer an "ad," be sure to mention the name of

AMERICAN AGRICULTURIST

Under Frozen Stars

(Continued from Page 12)

imaginary—this lovely, headstrong creature caring for Jim Stuart, fur trader.

"It's been so beautiful," she said, wistfully. "If we never meet again, we've had this day."

"Never meet again?" he gasped. "Don't even think of it! Meet again? Why, I'll only exist until you come back. It's all I have to live for."

Duty Calls

"But you have your duty," she mocked with a toss of her black head. "We might have many days like this—before September—only for that duty."

"We'd be sure to have trouble with your father. He'd find out." He shook his head gravely. "And you'd not really want me to forget my duty, would you? You wouldn't have me throw up my work and follow you to Winnipeg?"

"I could not love thee half so much, loved I not honor more," she taunted. "Oh, you men! You'd die for love, so you say; but your duty—well, that's a cat of another color." Suddenly two great tears stood on her lashes. With a moan her arms found the neck of the man beside her. "Oh, Jeem, I love you so. I just can't think of your going away."

"You'll write very often and send

them all by the Christmas mail?" he said, stroking her thick hair.

"But a canoe may go south in the fall."

"Yes, and I'll go to Expanse on the first sledding snow. The last canoe from the railroad might bring your letters."

"Jeem Stuart, what have you done to me?" she suddenly exclaimed, holding him at arm's length. "I've never felt this way before." She touched her heart. "It's as if I'd been stabbed, right here!"

"I know, sweetheart. I'll carry that longing through the short days and the long winter nights—that hunger for you." And the factor of Sunset House held the sobbing daughter of LeBlond, as he kissed her hair, her eyes, her throat.

A yelp and the thrashing of a heavy body in the brush was followed by the reappearance of Smoke.

"Smoke! You'll take good care of him for Aureore?" The girl patted the hairy skull thrust between them.

A mile away a canoe slowly approached, following the shore.

"There comes Omar."

"It's over, Jeem—our golden day," she sighed. "There's Marie, too. Come over here in these alders!" she suddenly commanded. "I can't bear to share you with these people, and I've a secret to tell you." (Continued Next Week)

HANDY ANDY Says "Here's How"

To Make Milk and Buttermilk Paint

By Ray Inman

Slake 12lb. of lime. Add, in the order given, 48 lb. of skim or buttermilk; 2 qt. of linseed oil; 48 lb. of whiting. Stir constantly while adding.

Slake lime and add enough skim or buttermilk to give it consistency of thin cream. Add 1 tablespoon of salt & 2 tablespoons of brown sugar to each gallon.

¼ lb. chloride of lime added to each 80 gallons of the whitewash will give it a germicidal value and will help to prevent a spoiled odor.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

If Your Assessment is High

WE frequently get letters from subscribers asking how they may get assessments changed when it seems that they are not on an equal basis with assessments on other real estate in their vicinity. We recently referred such a question to Mark Graves, Tax Commissioner of New York State, who replied as follows:

"(1) You should appear before the assessors on Grievance Day, which occurs sometime in August, and file a written complaint setting forth the facts showing the inequalities.

"(2) If the assessors do not adjust your assessment in such a way that you are assessed equally with other taxpayers in town, you may then institute a certiorari proceeding. Frankly, such a proceeding is so expensive that it is doubtful if you will wish to avail yourself of it.

"(3) Recognizing the truthfulness of the statement contained in the last sentence of the preceding paragraph, I am venturing to send a copy of your letter to the Equalization Commission of County. They can not command the assessors in such matters but I know the members of that Commission personally and know that they keep in rather close touch with the work of the assessors. It may be that they will be in position to enquire into the facts set forth in your letter and persuade the assessors of your town to either revise your assessment down to the average for your town or to revise your neighbor's assessment up to the average. You will please understand that it is not the individual case that counts but rather the average assessment ratio that governs."

It is our understanding that assessors shall complete the tax roll before August 1, and post it in three or more public places so that property owners can examine them. Grievance Day is

the third Tuesday in August and at that time the assessors have the power to administer oaths and take evidence on any complaint from a property owner that his assessment is too high. In addition to the assessors, the board of supervisors also has power to change and correct assessments.

Protect Your Rights

SOME time ago we called attention to a suggested oil and gas lease which has been prepared by the Federal Land Bank of Springfield, Mass. Since gas has been found in Southern Tier Counties of New York State, thousands of farms have been leased, some of them at much more favorable terms than others. Of course, the man getting the lease comes around with the blank and naturally the terms of the lease are as favorable as possible to the company.

American Agriculturist and the Federal Land Bank have been the first and, so far as we know, the only agencies to take steps to protect farmers' rights in new oil and gas territory. The Federal Land Bank has been very kind in sending these suggested gas leases to readers who requested them. If anyone would like to have a copy write either to the Federal Land Bank, Springfield, Mass., or to American Agriculturist, 461 Fourth Avenue, New York City. A few companies leasing land in New York State are using the lease prepared by the Federal Land Bank.

About Insurance Policies

WE frequently get letters from subscribers asking if they are liable for the premium on insurance policies which have been mailed them by insurance companies without authorization.

This is a rather common practice, particularly with fire insurance and automobile policies. When a policy expires the insurance dealer writes out a new one and mails it to the insured with a bill. The man who receives the policy often either does not see it or ignores it and later receives a bill and a threatening letter from the insurance solicitor.

Because of the many letters we have received, we referred this to a lawyer for an authentic answer. The reply

You Are Welcome!

I WOULD like to kindly thank you for your help in getting my deeds and the interest you have taken in my case. I do not believe those people cared anything at all about my letters that I wrote to them asking them to send my deeds, but I notice after you started to look after it they very suddenly woke out of their sleep and started to step around.

I am glad I have been a subscriber for your paper as long as I have been, and to know there is a greater power back of all of it than I ever realized before, and hope your success will be greater in the coming years.

states that people who get such bills can properly ignore them and if the insurance company threatens to sue that such practices should be called to the attention of the State Department of Insurance.

Of course, if you want the policy there is no reason why you should not acknowledge receipt of it and pay the premium. If you do not want it the man who sent you the policy cannot collect the premium even though he should take legal action against you.

Thanks to Troop K

IT would be difficult to estimate the value of the service which the New York State Troopers have given to subscribers of American Agriculturist. We are taking this opportunity of publicly thanking Lieut. Christopher Kemmler and Trooper Draisey, of Troop "K", for investigating a recent complaint which we called to their attention.

No "Easy Way" to Reduce

Could you tell me whether the Weil Health Belt Company of New Haven, Connecticut, is a reliable company or not?

WE referred this letter to the American Medical Association who replied as follows:

"The advertisements of the 'Weil Scientific Reducing Belt' and similar devices are, in our opinion, without justification. The idea that one can wear a belt that will massage away fat is a fantastic concept.

"Some years ago the Weil concern merely advertised its belt as a paunch-supporter. Then, as 'obesity cures' became a profitable form of quackery, they swung into line.

"The devices are, apparently, elastic belts to be worn around the abdomen. That such belts may give a feeling of support to those who abdominal muscular tone is poor is unquestionably true, but that they have anything whatever to do with the reduction of weight is obviously untrue."

No Reply

I am a reader of your valuable paper and am asking for assistance in collecting a claim for two cases of eggs I shipped to the Juniata Supply Company of Juniata, Pa. They paid me promptly for previous cases I sent but I am unable to get any reply to this letter.

THE eggs were shipped parcel post and delivery was proved through the Post Office. We have written several letters to the Juniata Supply Company but have never had the slightest acknowledgement from them. We are again referring to the old experience as a warning to other subscribers not to ship to firms unless they get financial report on them.

Kill Rats Without Poison

A New Exterminator that Won't Kill Livestock, Poultry, Dogs, Cats, or even Baby Chicks

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains no deadly poison. K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, oven-dried under the Connable process which insures maximum strength. Used by County Agents in most rat-killing campaigns. **Money-Back Guarantee.**

Insist upon K-R-O, the original Squill exterminator. All druggists, 75¢, \$1.25, \$2.00. Direct if dealer cannot supply you. K-R-O Co., Springfield, Ohio.

Socony Special plus Ethyl charges this tractor with plenty of power for the hardest job. Try it in your own tractor.

Easy going with SOCONY on the job

Bring on your big jobs! Then fuel your tractor with Socony Special *plus Ethyl*  and lubricate your engine with the New Socony Motor Oil. You'll say it's "easy going," too. Using these petroleum products keeps down repair bills and makes your equipment do better work.

SOCONY

Petroleum Products for the Farm

STANDARD OIL COMPANY OF NEW YORK

Some of the other products
Socony has made especially
for the farmer are:

Mica Axle Grease, made for axle lubrication on wagons and farm machinery, is of the best grease stock and ground mica. It fills the pores and crevices of the axle and forms a hard, bright, smooth coating which reduces friction to a minimum.

Socony Herd Oil, the best cow spray science has produced, insures contented cattle. One application protects cows all day long against barn and stable flies, and prevents irritation and annoyance at milking time. It is tasteless, odorless, easy and pleasant to apply. It will not contaminate milk.

Socony Lubricote (Household) Oil is made for all purposes for which a light oil is required. It lubricates, it penetrates, it prevents rust. It is useful for lubricating lawn mowers, bicycles, guns and all forms of light machinery.

Farmers have also found that it pays to use these Socony products: Leather Dressing . . . Socony Turex Oil (for Diesel and Oil Engines) . . . the New Socony Motor Oil . . . Socony Auto Radiator Cleaner . . . Tree Spraying Oils . . . Socony Disinfectant . . . Parowax . . . Socony Kerosene.

why so velvety?
why so wispy-light?

Let millions tell you why * * * Calumet's Double-Action!

● To MILLIONS of happy Calumet users, the secret of baking success is no secret at all! They've seen with their own eyes what marvelous new perfection Calumet's Double-Action brings to baking. They've heard their friends admire! They've listened to their families cheer! And from one home to another, they've spread the fame of Calumet—until to-day Calumet is the largest-selling baking powder in the world!

Calumet's first action begins in the mixing bowl. It starts the leavening. Then, in the oven, the second action begins and continues the leavening. Up!...up!...it keeps raising the batter and holds it high and light. Your cakes and quick breads bake

beautifully—light, tender—delicious!

All baking powders are required by law to be made of pure, wholesome ingredients. But not all are alike in their action nor in the amount that should be used. And not all will give you equally fine results in your baking. Calumet is scientifically made of exactly the right ingredients, in exactly the right proportions to produce perfect leavening action—Double-Action!

Remember—use only *one* level teaspoon of Calumet to each cup of sifted flour. This is the usual Calumet proportion and should be followed for best results—a splendid economy! Calumet is a product of General Foods Corporation. © 1931, G. F. CORP.

LOOK!... SEE CALUMET'S DOUBLE-ACTION!

Make this test—See for yourself how Calumet Baking Powder acts *twice* to make your baking better. Put two level teaspoons of Calumet into a glass, add two teaspoons of water, stir rapidly five times and remove the spoon. The tiny, fine bubbles will rise slowly, half filling the glass. This is Calumet's *first* action—the action that Calumet specially provides to take place in the mixing bowl.

After the mixture has entirely stopped rising, stand the glass in a pan of *hot* water on the stove. In a moment, a second rising will start and continue until the mixture reaches the top of the glass. This is Calumet's *second* action—the action that Calumet holds in reserve to take place in the heat of your oven. Make this test to-day. See Calumet's *Double-Action* which protects your baking from failure.

The July Fourth Party

Whether Party or Picnic--Use These Ideas

MOTHERS are thinking of the foods to serve and table decorations, children of the sports they will have, so it remains to the fathers to remember the real significance of July 4th—when in 1776 we as a Nation became independent of Great Britain.

Flags will give us our color note—and many red and white foods can be served. Use blue flowers with the flags for table decorations.

Effective eats and decorations too may be secured by serving potato balls, placed in mounds like cannon balls,

with blue frosting. Make stars of white frosting.

After dinner have an informal ball game, men against women, the men to bat left handed—unless they are already left-handed.

Then line up ten women of various sizes and heights and let men guess what size shoes they wear. Then line up the men and have women guess the size of their shirts, and hat bands.

Let the boys of the crowd have a real "bawl" game of their own. The prize, a baby pacifier or an all day sucker, goes to the boy who can bawl in the most realistic fashion and for the longest time.

Then let the girls compete in a "running high squeal." They toe the line and run to the mark as in regular races. Then they all stop and squeal. The girl who squeals the loudest wins the prize.

By that time all will be ready for a dish of ice cream and some good cake.—M. F. M.

Keep coffee pots and percolators clean and well aired. Coffee left standing in them will stain the inside and hurt the flavor of new coffee.

Clever Little Tuckaway Pillow

THE little box pillow with a Kate Greenaway maiden embroidered and applied on its top—number M693, is very popular. And by the way, it is more than appears on the surface. The back is double, making a pocket in which one may tuck pajamas during the day; or if the pillow be scented, kerchiefs, gloves and the like might be kept there until they emit a trace of the fragrance.

Materials are a plain ivory and a chintz-print sateen; the figure is daintily embroidered in single-strand black and white with a skirt of the glazed print.

Stamped medallion for appliqueing, front, double back, boxing strip and floss are all included together with instructions. A 9-inch box pillow form filled with kapok for the Kate Greenaway pillow is number M573A.

M693 All Materials stamped for pillow.....40 cents

M573A 9-inch Box Pillow Form, kapok filled....45 cents

with a tiny flag on top. Place flags on the cakes too. Pickled beets, tomatoes, strawberry short cake, oh, so many things! can be served to carry out the red and white colors.

If it is to be an out-of-door picnic, one of the finest sandwiches to make is the ham sandwich. One cup of ground ham, three sweet pickles cut or ground, four tablespoons of ground nuts, and mayonnaise to make soft paste. Spread between slices of fresh bread, well buttered.

Egg sandwich. Six hard boiled eggs, chopped rather finely. ¼ cup finely chopped or ground red radishes, three tablespoons vinegar, 1 teaspoon salt, mayonnaise. Mix all together and spread between brown bread and lettuce leaves.

Children especially will enjoy the "Firecracker Sandwiches." Cut fresh bread in thin slices, spread with butter, roll the slice, placing a string in one end, tie at both ends, with string hanging out like the fuse in a regular cracker, and roll lightly in sweet red pepper or paprika, and there you are.

Flag cookies are easily made. Make a good cookie dough, roll not too thin, cut in pieces, three inches long, and an inch and a half wide. On the inch and a half side place a wooden toothpick, and bake thus. Take two cups of confectioners' sugar and mix with white of an egg, to easily-spread consistency. Leave some white, color some red and some blue. Spread alternate strips of red and white lengthwise of cookies, having strips about one-fourth inch wide. In the upper left hand corner leave a half inch square and frost

Double Duty Costume

JACKET COSTUME NO. 3130 is tremendously in demand just now because with the coat it meets any afternoon occasion and with the coat removed, it is excellent for evening wear. Because of this fact it serves a double purpose, making one dress do the work of two. Lace or chiffon print or crepe silk would be charming in this model. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38, and 40—inch bust measure. Size 16 requires 4½ yards of 39-inch material with ¼ yard of 39-inch contrasting. PRICE, 15 CENTS.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with correct remittance in stamps. Add 12 cents for one of the new Summer Catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry Street, Poughkeepsie, N. Y.

Dairy Clans Gather at Utica

Hard Times Show League Unity --- Secretary Hyde a Speaker

By E. R. EASTMAN

DURING times of great economic depression and discouragement like these, one cannot help wondering occasionally what the future holds for farmers, but as I sit today at Utica and look into the upturned faces of more than 2,000 farmers gathered for the annual meeting of the Dairymen's

E. R. Eastman

League Cooperative Association from every community in the New York milk shed, my belief and confidence in the future of farming is restored. Certainly now, if ever, dairymen have a right to be discouraged, but if they are it is little in evidence at this large gathering of dairy farmers. Quite the contrary; enthusiasm and determination to carry on are very much in evidence.

The Hope for the Future

The very fact that so many farmers have taken the time to come here to this meeting during these hard and busy times shows what these dairymen think of their organization and of their business. One of the best proofs that the American dairy farmers will find some way to go forward in the future as they always have in the past is demonstrated by the way they support this League organization. It is certain that if farming is to endure, it must be organized. The day of individual marketing is past, and the best hope for agriculture lies in cooperation.

The morning session of this annual meeting of the Dairymen's League has been devoted to the reports of its officers, headed by the president,

Fred H. Sexauer. I have had the privilege of knowing Fred for several years and I pause a moment in talking of this meeting to state that in my opinion the League is to be congratulated upon its president. Backed by a lifetime of experience on a farm, as boy and man, President Sexauer knows what dairy farmers are up against in their every-day work and problems. He is sympathetic, but not to the extent of letting his sympathies influence good business judgment. He has a lot of ability expressed in common-sense decisions, and above all, he is sincere and anxious to make the League efficient and effective. In this determination the president of the organization is ably backed by its officers and directors.

Reports of the officers of the Dairymen's League Cooperative Association show that the organization did a business of more than \$80,000,000 during the last fiscal year. There are 47,790 members who produced the tremendous total of 2,793,866,306 pounds of milk last year, an increase of about six per cent over the volume held by the League the year before. Of this volume twenty-one per cent was sold in cities outside of the metropolitan area. The League milk went to 307 distributors in 107 markets.

The Surplus Problem

The League owns and operates 239 country plants which handle more than 1,245,000,000 pounds of milk, or about half of the total milk sold by the League. The surplus handled in these plants was about double that of the year before.

The League's great problem is to take care of the surplus. In doing so it fulfills one of the missions of cooperative organization, which is, to

take care of its members, especially in difficult times. The large increased surplus was made into cream, powdered milk, cheese, butter, and other by-products. Skimmed powder production increased one hundred and twenty-five per cent, so that the League is now fifth in the manufacture and sale of powdered milk in the United States. Cheese production increased twenty-two per cent.

President Sexauer reported today that in spite of the great increased surplus handled in the Association's own plants, savings had been made by improved efficiency in these plants amounting to \$432,000.

The reports of the annual meeting today show that the League owns and operates seventeen distributing branches in New York and other cities, doing a wholesale business of about \$14,500,000.

President Sexauer's Address

Touching upon the present economic situation as it relates to the dairy business, President Sexauer said:

"Low dairy product prices are being driven lower because the world is going through the greatest decline in business activity in eighty years. There is no reason to believe that agriculture will not suffer as much or more than other industries. In the past agriculture has always suffered more.

"We must look forward during the next year, and possibly several years, to lower price levels for agricultural and milk products. We must produce and operate more economically and efficiently both as individuals and as an organization.

"If it becomes impossible to maintain a fair price for milk, I can see nothing for the Dairymen's League to do but to demand that dealers

(Continued on Page 6)

Making Good Bordeaux Mixture

Not a Complicated Procedure, Yet Several Points May Cause Trouble

IT is possible to give directions for making Bordeaux mixture in sufficient detail so that anyone following them closely might get perfect results in a paragraph. On the other hand, conditions vary widely and it is often useful to know more of the details and, for that matter, to know the reasons why certain directions are given.

Probably the most common formula given for Bordeaux mixture is "4-4-50", which means that 50 gallons of the spray contains 4 pounds of copper sulphate and 4 pounds of quick lime. Frequently the question comes up, "Can hydrated lime be used and is it equally as effective as quick lime?" One authority states that hydrated lime will be satisfactory if it is divided very finely. A form known as "chemical hydrated lime" is recommended. Some hydrated lime is a little coarse and as a result, settles out of the spray mixture too rapidly. Then again, where hydrated lime is used it requires 66 pounds to equal 50 pounds of burned lime.

Slaking quick lime sounds simple, yet even here there is a right way of doing it. The slaking of lime is a chemical action which gives off heat. If water is added too rapidly or too slowly results will not be so good. Add the water just rapidly enough to prevent the formation of dust and, later, rapidly enough, to prevent explosive boiling without stopping the boiling entirely. This proper slaking of the lime has an important effect both on keeping it from settling out of the spray and also in causing it to stick more tenaciously to the leaves when it is applied. There is also a right and

wrong way of mixing Bordeaux mixture. The right way is to dilute the lime after it is slaked to a point where each gallon of liquid contains one pound of lime. In the same way the copper sulphate is dissolved so that each gallon of water contains one pound of the chemical. The copper sulphate can be best dissolved by suspending it in a cloth bag at the top of the water. If it is simply dumped into the water, constant stirring will be required—otherwise the water at the bottom of the container will dissolve all that it can hold and further solution will be stopped until it is stirred again. One might assume that the copper sulphate can be dissolved more rapidly by the use of hot water. If pressed for time, warm water can be used, but the solution of copper sulphate must be cold when it is mixed with the lime because a hot solution causes an undesirable chemical action which makes the spray less valuable.

The right way of mixing is to dilute both the

stock solutions. The two stock solutions should never be mixed together because the materials will curdle and settle rapidly to the bottom of the tank in coarse particles. One good method of mixing is to put 4 gallons of stock copper sulphate solution in a 50 gallon spray tank and fill $\frac{3}{4}$ full of water. Then add 4 gallons of stock lime solution while the agitator is running and fill the tank with water.

Where large amounts of Bordeaux are made, a lot of time will be saved by having things handy. This means running water, at least a two-inch hose to fill the tank so that the water will run in rapidly, and usually a mixing platform higher than the tank containing at least two large barrels and two smaller barrels to hold stock solutions. Run all materials into the tank through a 20-mesh strainer. By the way, Bordeaux mixture attacks iron and steel so that wooden barrels are commonly used for mixing and spray manufacturers use brass, bronze, or porcelain lined equipment in their sprayers wherever metal is required.

Making Bordeaux Stick

Bordeaux mixture is a protection to growing plants. With possibly one or two exceptions, it will not cure fungus diseases and, therefore, it is important that Bordeaux stick to the foliage as long as possible. There are several things which affect the length of time it will adhere. First, do not mix the two stock solutions. Second, use care in slaking lime, or, if hydrated lime is used, mix it up into a paste with a small amount of water rather than to dump it into a whole

Vol. 127 June 27, 1931 No. 26

Commencement Time Again

YESTERDAY we traveled up to a beautiful little village in the fine old State of Vermont to watch our oldest son graduate from college. As the more than a hundred young men and women entered the church in their caps and gowns, marching to the solemn tunes of the great organ, we were interested to see the faces of the fathers and mothers of those boys and girls—faces seamed and marked by the lines of Time, showing, in many cases, the hard work and the sacrifices to provide a home and education, that ideal of all American parents, for their boys and girls.

Looking at these older people, some of them poorly dressed, all of them stirred with the emotions of one of life's great events, we wondered for a moment if all of the effort and sacrifice of the fathers and mothers to educate their children were worth while. Then, turning back to watch the splendid young faces and figures of the graduation class, our question was answered, for most of those in the great army of young men and women going forth at this commencement time from school and college to take up the real duties of life will give full account of themselves and will be a credit to the institutions graduating them, to their fathers and mothers, and to the nation, which, since the first settlers landed on its shores, has believed in the fundamental necessity of education.

Daniel Willard, President of the Baltimore and Ohio Railroad and one of the great railroad leaders of the country, told the graduates of Middlebury College that they were going forth into the world in the most difficult times, in many respects, in history, "and yet," said President Willard, "the world has never seen such interesting times as the present and as the next fifty years will be."

"It may not be possible," continued the speaker, "for the college graduate to get the job or the work in these hard times that he wants or that he thinks he is best fitted for, but there are opportunities and interests in any job. Take what you can get, do the best you can with it, and maybe you will like it, and, if not, always remem-

ber that you can change, for no doors into the kind of job you want are ever permanently closed if you want to get there hard enough."

Lots of Rain Results in Good Hay

THE weather man has been showing some partiality in the different kinds of weather that he has been handing out in the last few weeks in different parts of the United States. With the amount of rain that most sections in the East have received during June, you would never believe that most of the country is suffering from drought. It is too dry in both the South and in the Central West, and a bad drought prevails throughout the Northwest, seriously endangering wheat and other crops.

In New York and New England we have seldom seen hay and pasture look better than it does at the present time. New seeding and alfalfa are particularly good. With plenty of good hay in the barn, a dairyman can wiggle through even with the low prices for milk.

Cow Prices Still too High

A RECENT investigation conducted by American Agriculturist, the results of which were printed in our June 13th issue, showed that prices of good grade dairy cows in the New York milk shed range from seventy-five to a hundred dollars. There has been a very material reduction in the prices of cows, of course, but prices are still too high.

For several years when the cost of dairy cows was at the peak, we warned dairymen that prices were too high and that a cow was worth just what she could produce at market prices of milk and no more. We were laughed at by some for our position and criticised by others, but now the greatest difficulty that many dairymen find themselves with low prices of milk is the fact that they bought cows at too high prices and are over-capitalized in their dairy.

There is only one reason for bringing up this subject now and that is to point out that dairy cow prices are not yet stabilized. They must go lower, and the sooner they get there, the better it will be for the industry. In fact, the prices for everything, including wages and cow prices, are going to be permanently stabilized on a lower level, and the sooner we all make up our minds to this, the quicker better times will come.

Take a Vacation With Us

THERE is still plenty of room on the American Agriculturist big excursion train to Yellowstone Park on the Northern Pacific Railway. Reservations are coming in every day, however, and it is time for you to make your decision. If you are planning to go with us, send us your reservation. If you are unable to go let us know later and your deposit will be returned to you.

The tour starts August 1st and lasts just eleven days. We know of no better way to spend a vacation. Full particulars will be sent upon request.

How My Community Solved Its Problems

ONE of the signs that civilization is slowly improving is that we are paying more attention, not only to the home in which we live, but to that larger home which we call the neighborhood, or community. Hundreds of country communities have accomplished real results in making their places better than they were and in solving some of the problems.

What is one of your outstanding neighborhood problems and what have you done to solve it? For all good letters that we can use on this subject we will pay space rates. Here are some suggestions:

What has your neighborhood done to improve the educational facilities for its boys and girls?

To provide public playgrounds for the children, not only during the school year but in the summer time?

To beautify the school grounds?

To improve attendance at the rural church, or possibly, to improve or remodel the church?

To build a Grange hall or a community hall?

To increase attendance at the regular local farm meeting, such as the Grange and the Dairy-men's League?

To provide better rural roads in your community?

To provide good economical electric service?

To get rid of unsightly billboard advertising?

To increase the facilities for recreation for young and old?

To improve the old cemeteries?

To eliminate nuisances, such as immoral dance halls, bootleg joints, etc.?

To improve community fire protection facilities?

To foster rural scouting and 4-H Club work?

To solve automobile parking problems in small villages and in rural districts?

To secure fair assessments of farm property?

To prevent thefts of farm property?

Letters should be written plainly, preferably typewritten on one side of the paper.

Address them to the Editorial Department, American Agriculturist, 461 Fourth Avenue, New York City.

Eat Your Surplus

MOST of the advice to eat more wheat or meat more of anything benefits one set of producers to the detriment of others. Our "tummies" will hold just about so much. If we eat more of one food, we must eat less of something else. But this does not apply when we say, "Eat more butter in the place of oleomargarine." Butter is a better and more healthful product, and it is a distinctly American agricultural product. Every time we eat a pound of butter, we help American dairymen.

If each farm family would consume one extra pound of butter a week for five weeks, there would be little surplus butter. How happy other kinds of producers would be if they had the same opportunity of eating themselves out of their surpluses!

Feeding and the Butterfat Test

WE receive many letters during the year from dairymen asking if there is any way of feeding the cow to increase the amount of butterfat. The answer is no. Many experiments have been conducted with all kinds of breeds and feeds. Occasionally, it is found that a certain feed will temporarily affect the amount of butterfat, but the cow soon comes back to her normal production.

However, while some special feed has no effect on the amount of butterfat in a cow's milk, it has been proven that poor, unbalanced feeding does reduce the cow's natural production of butterfat.

Eastman's Chestnut

POSSIBLY if more of us were like the grocer in the following story we would have less government in business and less taxes:

"A judge gave an Oregon grocer who beat up a government inspector a chance to defend himself. The grocer said:

"I am guilty. I lost my head. All the morning I held my temper while government agents inspected my scales, tested my butter, smelled my meat, graded my kerosene. In addition, your honor, I had just answered three federal questionnaires. Then this bird comes along and wants to take moving pictures of my cheese. It was more than I could stand—I pasted him in the eye."

With Our A.A. Boys and Girls

"GREATER love hath no man than this that he lay down his life for his friend."

When a boy in New York City risks his life to save another, an account of it usually finds its way to the front pages of our daily papers. Usually this does not happen where a life is saved on a farm. A young boy may grab a pitch fork and drive off an infuriated herd sire that has just attacked his father and no one but the immediate family ever knows of it. It is just a part of the day's work.

We know that boys and girls on farms are just as brave as those who live in congested cities, and we believe that instances of heroism should be recognized and emphasized.

Here is our plan. American Agriculturist will give to any boy or girl who saves another's life at the risk of his or her own, a beautiful certificate of award, setting forth the details of the rescue and signed by the publisher and editor, which can be kept and cherished for a lifetime.

Here are the rules that will govern the awards:

1. Any boy or girl not living in a

tests. After these county contests were held, the district elimination contests were arranged.

On May 16 Delaware, Broome and Otsego Counties competed at Sidney, New York. The winners of that contest were the Whitney Point girls' club. On Saturday, May 23rd, the Eastern part of the State held its contest at Kingston. Rensselaer, Columbia, Greene, Ulster, Orange, and Nassau Counties competed. The contest was a close one; Nassau taking first, Ulster, second, and Greene, third. The Nassau County group traveled 280 miles that day. There were twenty-two boys and girls in addition to the drivers of the cars that took them. They sang beautifully and earned the first place which was justly awarded them. St. Lawrence County being so far from other counties interested in the contest, constituted a Northern district in itself. The Potsdam Club, a mixed club with twenty-three members, won the contest and will represent the North Country at the State Club Congress.

The Western district, composed of Schuyler, Chemung, Allegany, and Monroe, held their competition at

English folk dances and songs in costume.

Everything considered, 4-H club agents and Miss Mary Eva Duthie of the Rural Social Organization Department of Cornell University, who has done much of the organization work in connection with the state contest, feel that it has been markedly successful.

The Letter Box

Hello A. A. Boys and Girls:

I have come to join your club. I am nine years old and in the fifth grade. I live on a farm where I raise chickens, one rooster, a dog and three little kittens. I set my hen with seven guinea eggs. Next month I will tell you how many guineas I have.—HELEN SOMERVILLE, R. F. D., Box 53, Hastings, Pa.

Would you please print my name in the letter box on the A. A. boys and girls page in the next issue? I am sixteen years of age and am fond of all sports. I attend high school in the town in which I live. I am anxious to exchange letters with boys or girls from 14 to 17 years.—WINIFRED SAUNDERS, Orwell, Vermont.

The Lake Delaware junior 4-H Club went on a hike recently. We started from Saint James parish hall and went past Lake Delaware. As we went along, Mr. Lennox, our County Club Agent, showed us different kinds of trees and told us their names, such as hemlock, red pine, white pine, scotch pine, locust, horse chestnut, elm, and yellow birch. We picked some of the loose bark of the yellow birch to start a fire with.

After a while we came to the Boy Scout Camp. There was a dam there with a pond behind, about an acre in area. We laid a fire place below the dam. Eugene Avery laid and started the fire with only one match. For dinner we had hunters' stew and cocoa. We were each supposed to bring besides the potatoes and onions for the stew, an orange, apple, and a cookie. After dinner we played baseball. Father Barry, rector of St. James and also the local 4-H leader, had us answer some

Ruth I. Bigelow of Whallonsburg, Essex County, and Secunda Ruth Korndyke, a 4-H Club calf that took ribbons at the 1930 Essex County Fair.

questions on trees. We then started back.—ROBERT NORTHRUP, Delhi, N. Y.

On April 25, in Rensselaer County at Schodack Center the boy's and girl's 4-H clubs combined in holding a Song fest to which neighbors and other club members were invited. The affair proved to be a success with eighty people present.

The program included talks by the Rensselaer County Club Agent, Mr. Albert Hoefer and Mr. Charles Traver, District Forest Ranger. Motion pictures of outdoor life and canoe trips were shown and then refreshments were served.—MARVELL MARKELL, East Greenbush, N. Y.

Scrambled Eggs

An egg tastes and look much the same regardless of the breed of hen that lays it, except that some eggs may have brown shells and some white. These are the ten breeds of fowls. However, the printer made a bad mistake and got all the letters in the wrong place. Let's see if you can unscramble them. Then if you want to be sure that you are right, turn to page 6.

Summer Garden Flowers

1. What flower is part of an unmarried man's attire?
2. Another flower uses a girl's name for part of its own and wealth for the last syllable. What is it?
3. One uses a boy's name for the last part of its own name. Guess what it is.
4. Still another has the name of part of a bird's foot.
5. Which is the flower said to mean "thoughts"?
6. Which common flower is associated with June brides?
7. What vicious beast is the name of a summer lily?
8. A Christmas green gives name to the first part of another flower. What is it?
9. Which flower has for its nickname Pollyanna's favorite word?
10. A certain flower beginning with "z" rivals the word "zebra" for popularity in cross word puzzles. Guess.
11. Another flower's name might mean bunches of sheep, though spelled differently. What is it?

(Turn to page 6 for answer)

A group of New York 4-H Club members who took part in the National 4-H Achievement Day radio program at Station WHAM last fall.

city and who has not yet reached his nineteenth birthday, will be eligible to receive the certificate.

2. In order to get a certificate it is necessary not only that you save someone's life, but that you do it at the risk of your own.

3. The editorial staff of American Agriculturist will investigate all applications and act as judges to decide whether or not applicants shall receive the certificate.

4. This offer is retroactive; that is, it is good from the date January 1, 1931. In other words, if you know of someone who meets the requirements set down and who has saved a life since January 1, 1931, write us a letter and tell us about it.

5. In case a boy or girl loses his life in attempting to rescue another, a certificate will be presented to their parents.

There are no finer folks in all the world than those living on farms. In a few years you boys and girls will be running the farms and taking your part in community activities. Parents and neighbors are already beginning to look to you for help. It takes real courage to risk one's life for another. If you know of a case which, in your opinion, meets the rules we have set down, will you not tell us about it? With every such award given, American Agriculturist plans to publish a full account of the incident.

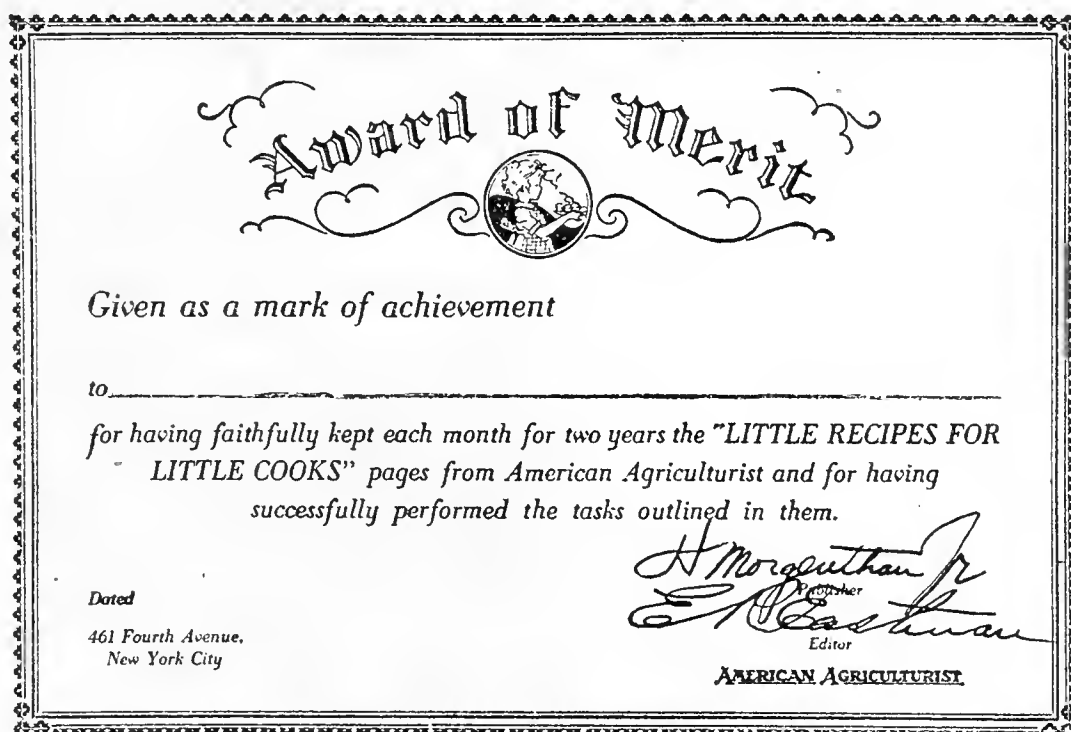

State Singing Contest Ends

ON the boys' and girls' page in our March 21st issue, we announced the singing contest for 4-H clubs. The clubs have done wonderfully well with this contest, fifteen counties having entered it. The National Bureau for the Advancement of Music offered certificates to the clubs winning first, second, and third prizes in the various county con-

Rochester on June 6. The Schuyler County chorus took first place, Chemung County, second, and Monroe County, third.

The final State contest will be held in Bailey Hall at Cornell University on Tuesday evening, June 30. Mr. Geoffrey O'Hara who will give a talk on music appreciation that evening will act as one of the judges.

Additional features of interest will be provided by the Otsego County seniors, a group of older girls from the 4-H clubs, who will give Swedish and

This illustrates the attractive award of merit certificate which is issued to all Little Cooks who have completed satisfactorily the twenty-four lessons of recipes for Little Cooks. All that is necessary for a Little Cook to do to obtain this certificate is first to practice all of the recipes until she gets them right, then get her mother or some other responsible adult to write to us saying that she has done so. Then this certificate, which is printed on prettily tinted pink paper and signed by the Publisher and Editor of the American Agriculturist, with the Little Cook's own name written on it, will be sent to her.

IF YOUR Cows Had Money to Spend—

WHAT would they buy? Shoes, candy, new hats? No! Every last one of them would trot down to the feed store for Dried Molasses Beet Pulp.

They know it's good—that it is bulky and palatable—that it is not only highly digestible itself but that it aids the digestion of the entire ration. Most important of all they know that Dried Molasses Beet Pulp increases the flow of milk.

And being of the gentler sex they know a bargain when they see it—prices are lowest in ten years.

Don't pay a fancy price for hay—six pounds of Beet Pulp will do the work of ten pounds of hay and do it better. Don't worry if your silage is getting low, Beet Pulp is even better than silage. See your feed dealer without delay. Shipments made direct from factory nearest to buyer.

Dairy Clans Gather at Utica

(Continued from Page 3)

reduce their operating costs so that the burden of lessened return may not fall entirely upon farmers.

"The shadow over the milk industry is the result of ten years of division among dairymen and distributors as to the policy they pursue in relation to marketing problems. Solution depends upon three groups:

"The Dairymen's League Cooperative Association and its willingness and ability to pick up surplus; and

"Willingness of independent producers to cooperate with this organization in putting this industry on its feet; and

"Distributors who buy milk on an independent basis without regard to their obligation to sustain markets or carry a load of surplus commensurate with the fluid markets they enjoy.

"If these three groups can be brought together and will lay aside selfishness and ulterior motives, to work for the benefit of the industry as a whole, our problem can be solved. We will be able to pass through this depression without the full burden of its effect falling upon the dairy industry of the New York Milk Shed as it is falling upon other groups of farmers throughout the country."

One of the high spots of the meeting was reached in the report of the Treasurer, Chester Young, when he stated that the Directors of the League, at their session held on the day before the Annual Meeting, had voted to appropriate a million dollars for the purchase of Dairymen's League Certificates of Indebtedness which come due May 1st, 1932. These Certificates will be purchased at 101, or one above par, with all interest due. Such Certificates must be bought, however, before December 31st, 1931; and will be purchased only as long as the million dollars last. This is the answer of the League to the calamity howlers who have always claimed that League Certificates would never bring very much money. In my opinion, the way the financial affairs of the League have been handled is one of the outstanding achievements of the organization.

Two New Directors Elected

The meeting elected two new directors—Paul Talbot of Burlington Flats, New York, and Ernest C. Strobeck, of Macedon, New York. Six directors were reelected. They are: L. M. Hardin, Sussex, N. J.; Johns S. Pettes, Greenwich, N. Y.; Leon A. Chapin, North Bangor, N. Y.; J. A. Coulter, Watertown, N. Y.; A. L. Milks, Little Valley, N. Y.; and Fred L. Utter, Friendship, N. Y.

Although there were only a few resolutions presented by the Resolutions Committee, they were important. One of them expressed the appreciation of the League membership to Dwight Beardslee, who served the organization as a Director for a period of seventeen years, and who is now retiring from the Board of Directors.

Another very important resolution called attention to the surplus conditions in the milk market and to price cutting methods being used by dealers and unorganized farmers, and then authorized the Board of Directors, in order to prevent the manipulation of milk prices, to enter the field of retail distribution. The matter, however, was left optional with the Board of Directors.

The only fireworks which exploded during the meeting was a resolution which would eliminate district and sub-district presidents. There was considerable emphatic debate on this subject; some maintaining that the presidents ought to be eliminated in the interest of economy; others just as vehemently contending that the presidents were rendering a very vital service. The matter was finally temporarily settled by asking the auditing committee to make a complete investigation of the presidents' work and expenditures, and re-

port later to the members.

The great meeting was brought to a conclusion with a bang with a constructive address by Arthur M. Hyde, Secretary of Agriculture, and member of President Hoover's Cabinet. Secretary Hyde is an outstanding speaker and he did credit to his subject, which was an emphatic support of co-operation in general, and of the Dairymen's League Cooperative Association in particular.

The Secretary first called attention to the great changes that have taken place in recent years whereby agriculture has increased its problems to include marketing. "Now agriculture is industrialized", said the Secretary. "It became an industry the minute it stopped depending on its own resources for the family living, and placed its dependence upon selling one primary product and buying what the family needed from the proceeds of sale. Most agriculture is specialized. * * * What a great and powerful industry dairying is. * * * The automobile industry is our new industrial giant, but the wholesale value of its products is not equal to the farm value of the annual milk production. * * * Measured in value of product, capital invested, or number of persons employed, dairying is our greatest industry."

The Secretary insisted that milk production must be reduced, and the way to do it is to eliminate the poor cows. "We could cull", said Mr. Hyde, "the lowest producing 10 per cent of our dairy cows and reduce the volume of milk and butterfat only 5 per cent, but such culling would not reduce the average dairyman's net income by a single dollar."

Secretary Hyde pointed out that the United States Department of Agriculture wants to do everything it can to support the League and the whole dairy industry. He said he was proud to support the recent bill for taxing colored oleomargarine.

The Secretary paid great tribute to farm women in the Dairymen's League. "In this effort", he said, "you are blazing a trail for all cooperatives. The farmer's wife is his best partner, not only in the home but very often in the operations of the farm."

The speaker ended his address with a strong tribute to the League, and said, "But more than all else, I congratulate you upon the big round fact that the Dairymen's League is a success. In these days of large business concerns your volume of business is impressive. A turnover of \$79,800,000 is one which most private corporations would envy, and one at which none would sneer. By its very existence after these ten years of storm and stress, the Dairymen's League has proved that a corporation organized and conducted cooperatively of farmers, for farmers, and by farmers, can be a business success."

American Agriculturist
10 N. Cherry St., Poughkeepsie, N. Y.

With the A. A.
POULTRY
FARMER

Infectious Bronchitis

My chickens seem dopey, and gasp for breath. Some of them have a bloody discharge from the mouth. What is the trouble, and what can we do about it?

FROM your description, it sounds as if your chickens were troubled with infectious bronchitis, a highly contagious disease. According to Dr. F. R. Beaudette, poultry pathologist of the New Jersey Agriculture Experiment Station, "Infectious bronchitis is so highly contagious that it is almost impossible to prevent the spread of infection after it has appeared in a flock. There is no specific treatment and most of the patent remedies do more harm than good. Consequently, a poultryman has to content himself with the results obtained through 'nursing' the chicks during the outbreak, which rarely lasts more than a week or ten days. To this end, crowding is to be avoided, and the air should be kept as free from dust as possible. Absolute protection from drafts and exposure should be provided and, if possible the brooding temperature should be raised."

The best method of treatment means the elimination of disease on the premises of the poultry farm by preventing outbreaks in young birds. This necessitates the absolute isolation of the new stock until the survivors of the last outbreak have passed their period of usefulness, and have been disposed of as meat birds. The quarters occupied by survivors should be thoroughly cleaned and disinfected because the virus of infectious bronchitis is capable of living a year in the dry state.

Caponizing Popular

CAPONS are becoming an increasingly popular branch of poultry keeping in some sections. According to the University of New Hampshire, the most suitable time for caponizing is during May, June, and July, which will allow time to properly finish the birds so they will be ready for the Christmas holidays. Cockerels are suitable for caponizing when they are one-half to two pounds in size. A bulletin on caponizing is put out by most State Colleges and may be secured free of charge.

Preservation of Eggs

PUT down some eggs in water glass to be used next fall when egg prices are high. (At least we hope they will be high! Only about two-thirds as many baby chicks were raised as last year.) The procedure in putting down eggs is simple. First candle all eggs and remove all spots and cracks. Then place them in a crock. Next make up a solution consisting of one part of commercial water glass and nine parts of cooled boiled water. Pour this solution over the eggs so that there is about two or three inches of solution over the top layer of eggs. Place crock in a cool place.

Shipping Live Broilers

IN shipping live birds to market, shrinkage can be cut to a minimum by providing scratch grain which has been soaked in water. This soaked grain should be fed in cans which are securely fastened to a corner of the coop, preferably with stovepipe wire.

The difference between lice and mites, at least as far as poultrymen are concerned, is that lice live on the birds and mites live on the roosts, etc., attacking the birds only at night.

It is cheaper to prevent a disease among chickens than to try a cure after it has appeared.

Watch the nests and see that they contain enough litter so that the eggs will not be broken in the nest.

Pasture is NOT Enough

Repeated tests show that while pasture plus good dairy feed is better than pasture alone, yet pasture plus dairy feed plus roughage (hay and silage) is still more profitable.

Under present market conditions most dairymen will find it profitable to replace part of the silage and hay with

DRIED MOLASSES BEET PULP

Dairymen interested in their results next fall and winter, as well as now, should follow this program for their cows:

- (a) Good Pasture.
- (b) 3 or 4 lbs. daily of Dried Molasses Beet Pulp.
- (c) A good dairy feed, fed according to milk production.
- (d) Ample water supply.

Cows so fed will milk better all summer, go into the winter in better condition, and produce more profitably all year.

Ask your dealer for Dried Molasses Beet Pulp, or write

THE LARROWE MILLING COMPANY
Box 68, N. End Sta., Dept. A-10, Detroit, Michigan

Left: Dried Molasses Beet Pulp before it is moistened.
Right: Note how it swells after water is added. Loosely held together; is digested to the utmost.

Celery Plants all leading varieties ready for field. \$1.25-10.00; \$10.00-10.000.
J. C. SCHMIDT, - BRISTOL, PENNSYLVANIA

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk (Metropolitan area)	2.90	2.70
2 Fluid Cream		
2A Fluid Cream	1.66	
2B Cond. Milk	1.91	
3 Evap. Cond.		
Milk Powder		
Hard Cheese	1.30	1.10
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for June 1930 was \$3.00 for 3.5% milk and Sheffield's \$2.80 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Good Trading in Butter

CREAMERY SALTED	June 20, 1931	June 13, 1931	June 21, 1930
Higher than extra	23 -23 1/2	23 -23 1/2	33 1/4-33 3/4
Extra (92 sc.)	22 1/2	22 1/2	32 3/4
84-91 score	19 -22	19 -22	28 -32 1/4
Lower Grades	16 -18 1/2	16 -18 1/2	26 1/2-27 1/2

The butter market experienced a week of good trading from June 15 to 20 inclusive.

It appears quite certain that we have reached the peak of production. In most of the large dairy sections conditions are generally favorable for production. However, there are some very important sections that have been severely hit by dry weather. If the conditions there prevail for any length of time we are going to see a shrinkage in production. In fact some regions have already shown some shrinkage. New York's receipts have been short of those of a year ago. Cold storage figures for the ten cities likewise show a reduction under those of a year ago. On June 19 the ten cities making daily reports had in cold storage 37,783,000 pounds of butter whereas on the same weekday a year ago they held 46,058,000 pounds. From June 12 to June 19 storage holdings in the ten cities increased 7,120,000 pounds, while during the same period last year holdings increased 7,536,000 pounds. The statistical condition is obviously very firm and during the past week it appears that the speculators have appreciated the fact that the market looks good for a long hold.

Cheese Market Higher

STATE FLATS	June 20, 1931	June 13, 1931	June 21, 1930
Fresh Fancy	13 1/4-14 1/4	12 1/2-14 1/2	18-18 1/2
Fresh Average			
Held Fancy	12 3/4-13	21 -23	24-26
Held Average	21 -23		23-

The cheese market moved to higher levels during the third week in June with more active buying on the part of the speculative interests. The market has shown increasing willingness to take on full grass cheese for storage. The West continues firm with a trend continuing upward. This has given good support to the New York market. The make in the West is short compared with last year. On the other hand New York State flats are in good supply, they are moving freely, and the tone at the close of the market on the 20th was firm.

Statistically the cheese market is in a particularly strong position. The ten cities making daily reports had in cold storage on June 19, 10,611,000 pounds of cheese whereas on the same week day a year ago storage holdings totaled 14,810,000 pounds. In 1929 the same cities held slightly over 12,000,000 pounds. From June 12 to June 19, this year storage holdings increased only 537,000 pounds whereas during the same period last year holdings increased 1,565,000 pounds and during the same period in 1929 holdings increased during the comparable period 685,000 pounds.

Egg Supplies Still Heavy

NEARBY WHITE	June 20, 1931	June 13, 1931	June 21, 1930
Hennery	21 -25 1/2	23 -26	30 -32
Selected Extras	23	21 1/2-22 1/2	28 -29
Average Extras	21	22 1/2	20 -21 1/2
Extra Firsts	19 1/2-20 1/2	20 -20 1/2	25 -27
Firsts	17 1/2-18 1/2	17 3/4-19	23 1/2-24 1/2
Undergrades	-17	-17 1/2	22 -23
Pulleys			
Pewees			
NEARBY BROWNS	June 20, 1931	June 13, 1931	June 21, 1930
Hennery	21 -25	21 1/2-25	28 -33
Gathered	17 -20	17 1/2-21	24 -26 1/2

The receipts of eggs in the New York market during the third week in June did not bear out what the Government report of June 1 led the trade to expect. The report indicated a sharp falling off

in the production of eggs. Posted receipts on the 15th and 16th both in New York and Chicago showed a sharp gain over last year and the trade lost heart. As a result there was a marked lack of confidence in the market, receivers being unwilling to store many of the current arrivals, and an increased pressure to sell forced prices down. Toward the latter part of the week ending June 20, the demand gained strength and there was some price recovery. However, in spite of the better tone and firmer feeling, the trade is very conservative. Operators are anxious to keep eggs moving into consuming channels in view of the fact that local holdings in the cold storage warehouses are heavy for this season of the year.

Nearby eggs shared in the general decline but as the week came to a close prices recovered to within a fraction of the close of a week ago.

Cold storage holdings in the ten cities making daily reports are still slightly under those of a year ago but the rate of increase in holdings appears to be higher. On June 19 the ten cities report holdings totaling 5,028,000 cases. On the same week day a year ago they reported 5,360,000 cases. From June 12 to June 19 holdings increased 234,000 cases. During the same period last year holdings increased 189,000 cases.

	-12	12-13	12-14

Heavy supplies of broilers arriving by express and truck toward the close of the week ending June 20 caused the market to close with an easy tone prevailing. On June 15 the market opened easy and lower than the close on the 13th. However, arrivals were light, due to the heavy rains and low prices, and the situation improved at mid-week. Again toward the close we were receiving more than enough stock and the market eased off once more.

The July 4th holiday offers another special period for broilers. We urge shippers to avoid a repetition of conditions that existed at the time of the Decoration Day holiday. At that time several large shipments arrived late and had to be carried over to the following week. To avoid this, time your shipments so that they arrive not later than the morning of July 2 and there are those who say that July 1 arrivals will be equally favored.

In the Produce Market

More fruits and vegetables are coming into season with the passing of each week. Sour and sweet cherries from the Hudson Valley are coming in at a great variety of prices. Red sweet cherries are bringing from \$1.25 to \$1.75 per twelve quart Climax basket, while red sour cherries are bringing from 75c to \$1.50. The spread in prices indicates the wide variation in quality.

Hudson Valley gooseberries are on hand, meeting a limited demand and a dull market, at 8c to a shilling a quart.

Strawberries have been meeting a good market with prices showing an inclination to advance. Prices cover a wide range due to the variation in quality, poor stock bringing as low as 10c and a few fancy lots bringing as high as 12c per quart.

Fresh vegetables now coming in include asparagus, beets, carrots, celery, lettuce, peas, rhubarb, etc. As stated last week, radio reports offer the most reliable source of information on these commodities due to the fact that the market can be interpreted from day to day. Tune in every noon on WEA.

Hay Shows Further Weakness

Continued heavy arrivals and an extremely light demand has driven the hay market to lower levels. Top quality timothy hay is unusually scarce. Medium and low grade hay is not getting any attention and drags heavily. The

bulk of the supply is in small bales. Prices range from \$19 to \$21 for No. 2 timothy and \$17 to \$19 for No. 3. Timothy containing a light mixture of clover ranges from \$20 to \$22 for No. 1 and \$19 to \$20 for No. 2 and \$18 to \$19 for No. 3. Timothy containing a light mixture of grass brings \$15 to \$21 depending on the grade. In contrast to the hay market rye straw has been bringing more money, closing at \$21 to \$22. Contrast this with the price the New York market is paying for No. 1 alfalfa from California, namely \$23 to \$25. Oat straw still brings \$13 while wheat brings \$12. We do not look for any improvement in the hay market, trade being slow and weak at the close.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Meats and Livestock

CATTLE—Steers slow, about steady. Three loads offered. Two loads good heavies scaling 1452-1532 lbs. at 8.00-8.50 respectively. One load 1214 lbs. at 8.25. Sows steady, medium to good 4.00-5.00, cutters 1.75-3.25.

VEALERS AND CALVES—Vealers slow, weak. No good to choice nearby kinds offered. Few common to medium Southern 5.00-7.00.

LAMBS AND SHEEP—Lambs slow and uneven, 25c to mostly 50c lower. Desirable Kentucky lambs 8.50-9.00. Medium to good Virginias 6.75-8.00. Common kinds down to 5.00. Sheep scarce, nominal.

COUNTRY DRESSED CALVES—Receipts were light during the week. Trading was slow all through. Small calves were light in supply and obtained almost as much as heavyweights which were too plentiful. Market closed weak and irregular on tops and not cleaning up. Fresh receipts per pound: Choice 10-11c; fair to good 9-10c; small to medium 8-9c.

LIVE RABBITS—Receipts light during the week. Demand slow, market closed steady at 13-18c per pound.

Bean Market Continues Slow

There has been no change in the bean market. The demand continues very quiet for all varieties with the tone of the market generally easy. The situation prevails not only on Domestic stock but foreign goods as well. Michigan pea beans are meeting considerable competition from Japanese Kotosashi which are in demand by the canners. Marrows still bring \$3.75 to \$5.50; Pea beans, 4.25 to 4.75; Red kidneys, 6.50 to 7.25; White kidneys 5.50 to 6.25; limas, 6.00 to 6.50.

SWINE

FEEDING PIGS \$4.50 Each

Prepaid \$5.00. Select, crated, C.O.D. Grain fed. Mostly Poland Chinas. Few other breeds. SHOATS around 40 lbs. \$6.25. These shoats started on garbage, vaccinated, castrated, \$7. C. STANLEY SHORT, Cheswold, Delaware

New York Farm News

Rural Government Topic at Conference

THERE is a widespread interest in the reorganization of rural government. This problem will be discussed by many prominent men at the Fourteenth National Country Life Conference being held at Cornell University on August 17 to 20.

Dr. Liberty Hyde Bailey, who was chairman of President Roosevelt's Commission on Country Life, is President and will deliver the opening address. The general program includes Dr. G. W. Rutherford, Professor of Political Science at Iowa State College, on "American Traditions in Rural Government"; Professor Robert H. Tucker of Washington and Lee University, and chairman of the Virginia Commission on County Government, who will speak on "County Government"; and Honorable Franklin D. Roosevelt, Governor of the State of New York.

Most of the sessions of the conference will be divided into six forums, which will make possible a better discussion of special phases of the conference theme. The subjects of the forums will be: 1. County Organization and Management, 2. Village and Township Government, 3. Taxation, 4. Public Education, 5. Public Health and Welfare, and 6. Rural Planning, including Land Utilization, Reforestation, Electrification and Roads. Some of the leading authorities on rural government will address the forums, including Dr. Paul Water of the University of North Carolina, Dr. Harley L. Lutz, Director of the New Jersey Commission to investigate county and municipal taxation and expenditures; W. B. Duryee, Secretary of the New Jersey Department of Agriculture; Dr. C. J. Galpin, and Dr. T. B. Manny of the United State Bureau of Agricultural Economics; Professor B. H. Hibbard of the University of Wisconsin; Senator S. C. Mastick, Chairman of the New York State Commission on Revision of the Tax Laws; Dr. Henry C. Taylor, Director of the Vermont Commission on Country Life, and formerly chief of the United States Bureau of Agricultural Economics; Dr. F. P. Weaver, Professor of Agricultural Economics, Pennsylvania State College; Raphael Zon, Director of the Lakes States Forest Experiment Station; John M. McKee, Executive Secretary of the Pennsylvania Joint Committee on Rural Electrification; and others. In connection with the conference there will be meetings of the National Guild of Master Farm Homemakers, and of Boy Scout Executives and Rural Leaders.

A complete program has just been issued and may be obtained by addressing the American Country Life Association, 105 East 22nd Street, New York City or Professor Dwight Sanderson, New York State College of Agriculture, Ithaca, New York.

New Conservation Director

THE recent appointment of William C. Adams of Boston, Massachusetts, as Chief of the Division of Fish and Game of the Conservation Department to succeed Llewellyn Legge, whose resignation becomes effective July 15, has caused much favorable comment.

Mr. Adams, who now holds the position of Director of the Division of Fisheries and Game in the Department of Conservation of Massachusetts, held the highest rank in the list of qualified candidates as a result of the Civil Service Examination, which was held last month.

The supervision of the State's game farms, refuges and hunting grounds, its fish hatcheries and rearing stations, its Bureau of Marine Fisheries and the field force of 161 game protectors and inspectors besides general supervision over scientific studies in the propagation of fish and game and administration of the hunting and fishing laws will be among the duties of the new chief.

Purebreds Bring Good Prices

A KEEN demand for animals of good butterfat production records, was evidenced at the National Convention Sale held at Syracuse on June 4 and 5, following the meeting of the Holstein-Friesian Association of America. The cow consigned by T. R. Dent of Woodstock, Ontario, brought the top price of \$2050, paid by Lauxmont Farms of Wrightville, Pennsylvania. Her present record is 756 pounds of butterfat in 19,016 pounds of milk. She

is the daughter of Springbank Snow Countess, the only cow of any breed with six records averaging more than 1,000 pounds of butterfat.

Major Rose Pansy, consigned by Hargrove and Arnold of Norwalk, Iowa, and sold to Harvey Rettew of Manheim, Pennsylvania, brought \$1010, the top price for bulls. The average return for the 124 animals sold was \$351, indicating that good animals still bring a fair price.

Sling Those Shoes

ALL plans are well under way for the Annual A. A.-Farm Bureau Horseshoe Pitching Tournament at the New York State Fair. Many counties have expressed their intention of being represented at the contest again this year and from prospects

Lower Fare for A. A. Yellowstone Tour

THOSE who have already made reservation for the A. A. Yellowstone Tour August 1 to 10th or who are planning to go on the trip, and who live east of Utica will be interested in this news. We have just been informed by Mr. Bedell of the Northern Pacific Railroad that there has been a reduction in the rate as printed in the folder we have been sending out to our subscribers. The reduction per person from New York City will be \$13.82; from Albany, \$8.70; and from Utica, \$3.25. Comparable reductions will be made from stations between these points. From Utica west the fare will remain as already quoted.

As soon as reservations are received by us, the Northern Pacific Railroad figures up and sends the exact cost of return ticket from subscriber's own railroad station. It is to your advantage to make reservation early, which requires only a \$10 deposit. If for any reason you find you are unable to go this deposit will be refunded to you.

at present, this should be one of the largest held so far.

Elimination contests are being staged by each county to decide on the contestant in the State Tournament.

If you would like to have a copy of the rules of the National Horseshoe Pitchers' Association, send your request to American Agriculturist, 461 Fourth Avenue, New York, N. Y.

Cabbage Prospects

A CONSIDERABLE amount of early or Domestic cabbage already has been planted in New York. Part of this will undoubtedly come into market and the rest of it will be sold to the kraut factories depending upon the market demand at harvest time. Present indications are that 12,000 acres of Domestic cabbage will be grown this year, which is a two per cent increase over 1930. From the present prospect, it seems probable that the acreage of Danish, or late cabbage, will also be increased. It would be well if growers would consider these indications now when acreage can be reduced rather than next September or October when the crop is being marketed. A small crop bringing a high price will bring a greater return to the grower than a large crop sold at a low price.

Bits O' News

Frederick C. Simmons, Jr. of Waverly, has been awarded the Charles Lathrop Pack prize at Yale University, for the best essay on forestry. The prize, which is \$100 in gold, was awarded to Mr. Simmons when he received his Master's Degree at the commencement exercises at Yale on June 17.

Some damage was done to crops in the vicinity of Brockport and Albion by the severe electric storm on June 14.

A NEW OPPORTUNITY

for

LOCAL ADVERTISERS!

AMERICAN AGRICULTURIST

Zone Plan

Offers

local advertising coverage thru 12 separate zone editions

American Agriculturist is now publishing editions for twelve separate zones as designated by the map above. Advertising space may be purchased at an attractive rate for one or more of these zones. This plan offers a new opportunity to merchants, manufacturers, and others whose trading area is confined to one or more zones and who could not use the entire circulation of American Agriculturist. American Agriculturist circulation reaches farm homes in the territory as designated once each week throughout the year, and because of its prestige as a farm magazine over a long period of years, is sure to gain for an advertiser an excellent acceptance for his goods or services.

By
George Marsh

canoe grow smaller and smaller, until it turned and disappeared behind an island.

CHAPTER XIII

The Story Thus Far

Jim Stuart rescues Aurore LeBlond, daughter of the head of the rival fur trading post and then falls in love with her. Paradis, who works for Aurore's father, is bitterly jealous. Jim and Aurore arrange to leave their letters on an island where Paradis intercepts one of them and is given a ducking by Jim.

Jim and Omar call on Christie, Jim's superior who is dissatisfied with the business Jim is doing. On the way back they are fired upon by an Indian who is captured and who confesses that he was hired to do the job by Paradis. As a result of the confession, LeBlond orders Paradis out of the country.

Jim plans to go North to get more business. He and Aurore meet on the island for one last day together.

* * *

In the protection of the alders, she turned and flung herself passionately into his arms. "This is my secret. I love you, Jeem Stuart," she whispered.

"You'll not forget me down in Winnipeg—not forget me among all those city men?" he asked.

"Forget you?" Through half closed lids, she looked up at him as she shook her head. "You're a magician—a medicine man. They don't have them down there. I had to come to the forests to find one. You've put a spell upon me, Jeem Stuart."

The Parting

As the canoes approached, the two in the alders said their farewells. Stepping into her boat, she turned to the man beside her with: "Good-bye, magician! Don't forget me!"

Jim bent to shove off the craft and his lips touched her hair as he said: "It will be black night up here through the long snows, Aurore. Come back soon!"

The canoes of Aurore and Jim left the beach and separated. Then across the water she called back to the man whose eyes had not left her: "Au revoir! Until spring!"

With the premonition that the distant canoe was taking her out of his life—that the white figure of Aurore LeBlond was fading from his sight never to return—Stuart watched her

canoe grow smaller and smaller, until it turned and disappeared behind an island.

At last, one windless evening, the Peterboro rode the flat surface of a large lake, rose-tinted beneath a flushed sky, past ridges purple against the afterglow. In the distance, the smoke of supper fires, rising from islands, announced that the voyageurs had reached the first of the fishing camps they sought.

"Ah-hah!" exclaimed Omar, trailing his paddle while he wiped his wet forehead. "To-morrow we mak' talk wid dese peopl'."

"But it's going to be a job to get them to listen to us," said Jim.

"Dey listen all right, w'en we tell dem we come nord, before Crismas, in de Little Moon of de Spirit to trade wid dem."

"I'd like to know just how Paradis and Jingwak have got them to believe all this devil stuff."

"We fin' out, Esau and Omar."

"I trade for a bark cano' an' tak' leetle trip by myself. Den I know w'at mak' de troub'," said Esau.

"You'll have to be careful, Esau. These Ojibwas are a wild lot. They wouldn't hesitate to do away with you if you interfere with their shaman, Jingwak."

The lean face of the old Indian wrin-

kled in a grin. "You see w'at Esau do to dat shaman."

"Goin' to get his ears?" laughed Jim. "Eef I fin' heem, he mak' no more bad medicine for Sunset House," was the cryptic reply.

So the travellers turned in shore, where Smoke awaited them, and made camp. Later, as they smoked beside their fire, the ears of the dog lying beside them suddenly lifted; the hair of his back and ruff straightened, as his deep throat rumbled in a low growl.

The men stopped talking to listen. "W'at you hear, Smoke?" whispered Omar.

The dog rose and picked his way on stiff legs to the beach.

"Cano' comin'!"

Then, through the gloom, the faint thud of paddles on gunwales reached Jim's ears. Smoke's warning growls changed to the angry husky challenge.

"Guess we're goin' to have some callers," surmised Jim.

"Ah-hah. Dey see us an' come to have a look," muttered Omar.

Shortly, as the canoe neared the camp, came the hail, "Bo'-jo', bo'-jo'!"

"Bo'-Jo'!" answered Omar, strolling to the beach to receive the strangers and quiet the excited Smoke.

Presently, from where Jim sat by the fire, he saw the dark shape of the boat slide in to the beach and two figures step out. Reaching the circle of light, the Indians exchanged the customary salutation and handshakes with the white man and Esau.

Handing the strangers a plug of tobacco, Jim invited them in Ojibwa to sit down,

"You have come far," vouchsafed the older of the Indians, in his native tongue, when he had lighted his pipe and made a minute inspection of the young white man through narrowed eyes.

"Yes," answered Jim, "we have come to talk to the people of the Pipestone Lakes and Sturgeon River."

"You are from Mitawangagama?"

"Yes."

"You are chief at the post of the old company, called the House of the Setting Sun?"

"Yes."

The small eyes of the Indian snapped, his body stiffened, as he leaned toward Jim and angrily demanded, "Why do you bring your evil spirits to the Pipestone Lakes?"

At the embarrassing question Omar, who had been studying the Ojibwa, broke into a loud guffaw, joined by Esau. "Paradees, he tell you that?" demanded the half-breed. "Are the men of the Pipestone Lakes children to believe the lies of the Frenchman? He tell you that to keep your fur for himself!"

Disconcerted by the ridicule, the Ojibwa glanced doubtfully from Omar to Jim's smiling face.

"Paradees plays with you to get your

American Agriculturist, June 27, 1931 fur," went on Omar in Ojibwa. "He is a liar, and LeBlond is through with him; he has sent him away to the south. You will see him no more."

At the words, the Indians exchanged surprised and puzzled looks. For a time the older man smoked in silence, his eyes on the fire; then he addressed Jim. "You do a foolish thing to come to the Pipestone country. The hunters fear you."

"Do I look like one to be feared?" demanded Jim opening his arms. "I come from the old company who gave you and your fathers honest guns and blankets, flour and tea, before LeBlond poisoned your hearts against us. I come here now to seek your friendship and kill the lies of this Paradis. This moon, in the south, he tried to have me shot, and his master LeBlond has sent him away. If I say but the word the fathers in Ottawa will send men and take him to the railroad to be punished."

As Jim spoke the Indian's small eyes probed his frank features as if attempting to measure his sincerity. "You seem to speak with a single tongue," said the Ojibwa. "Your eyes are not the eyes of a liar, but the hunters fear your medicine. They say you are the friend of demons. I came to warn you not to journey into the Pipestone country."

"What is your name?" asked Jim, impressed by the speaker's sincerity.

"My name is Baptiste Wagosh. This is my son."

"Where is the shaman, Jingwak?" asked Esau, abruptly.

Wagosh scowled at the question. He looked hard into the swart faces of Omar and Esau thrust toward him.

"Why do you ask?"

"Because," answered old Esau with a grin, "he is a false shaman, a wabeno, and is paid by Paradees to keep the trade for LeBlond."

A Warning

Wagosh and his son exchanged significant looks. "Jingwak is a big medicine man," replied the older man, quietly, "this is his country. Go back to Mitawangagama, before it is too late."

The blood darkened the bronzed face of Jim Stuart as he replied: "Go back and tell your people that the old company traded with their fathers' fathers, and wishes to trade with them. I have come to talk to them as their friend and will not be driven out by this false shaman, this wabeno, Jingwak, who is paid by the French."

With muttered "bo'-jo's" the Indian and his son went to their canoe and paddled away into the gloom.

"Well, what d'you make of it?" asked Jim of his friends.

Omar's black brows knotted, mapping his weather-cured face with lines. "Look ver' strange to me—dey come first night we get here."

(Continued from Page 12)

HANDY ANDY Says "Here's How"

To Sell Your Milk in Good Condition

By Ray Inman

1. Always Feed AFTER milking.
2. Clean udder and flanks before milking. Milk with dry hands.

3. Cool milk immediately after milking. Stir occasionally until cooled.
4. Cover cans after milk is cooled.

5. Never mix night and morning milk before both are cooled.
6. See that milk is tightly covered while hauled to market.

How A. A. Protects Subscribers

A FEW minutes before this was written a subscriber in New Jersey telephoned the Service Bureau that two young fellows in a brown Oakland car, bearing Pennsylvania License No. 827EO, had just left her place. They were selling linoleum. Our subscriber showed them the article "The Old Linoleum Game" which appeared on the Service Bureau page of American Agriculturist June 6th and asked them if they were the fellows referred to. She said they rolled up their linoleum and left in a hurry. Five minutes after she phoned us we telegraphed Colonel Norman Schwarzkopf of the New Jersey

been delivered May 15. As yet nothing has been received. He operated here in and about Ithaca, April 21, and took money from a goodly number of people. Checks have been cashed by local concerns.

Today, when interviewed, the local manager of the Standard Oil Company said he knew nothing of such a business project on the part of the oil company and never had heard of H. Worden.

THE experience of our subscriber strengthens the opinion we have had for some time, namely, that an investment with any concern that claims to list tourist homes or gift shops, is not likely to pay very heavy returns. In this particular case, the fact that the Dillbert Tourist Directory fails to give any home address on the receipt does not tend to strengthen our confidence in them.

We would be glad to hear from any subscribers who have had experience with this concern, or from anyone who knows the home address of the Dillbert Tourist Home Directory so that we can get in touch with them to see why our subscriber has not received the directory which was promised to him.

Rabbits

Our son sold some rabbits to Harry W. Cobb of Gettysburg, Pa. Through an error they were not sent C. O. D. as we wished to have them sent. Mr. Cobb sent a note as payment and when the note became due did not pay the amount. The amount due is \$16.49. Can you help us get it?

MANY of our subscribers will remember Mr. Cobb through his connection with the Glen Rock Nursery. We have had quite a number of complaints against Mr. Cobb ranging back over a number of years and very seldom have we been able to get any adjustment for our subscribers. We forwarded this particular complaint to Mr. Cobb who replied that he is out of work, has no income, and no resources. He does not know when he is going to be able to settle this complaint although he acknowledges it is a valid one and says that he is planning to settle as soon as he is able.

Figures on Paper

What do you think of the American Mushroom Company of Toronto, Ontario? They sell mushroom spawn and then buy back the mushrooms.

THIS company advertises that those who buy mushroom spawn from them may earn up to \$25.00 a week or more growing mushrooms in cellars all winter. Experts have figured that, on the usual crop basis, it would require 1300 to 2600 square feet of mushroom beds to return the grower \$25.00 a week, for a year.

We would also like to point out that the growing of mushrooms is a very specialized business and requires a lot of experience. It would appear that the business of this mushroom company is to sell spawn from which mushrooms are grown. It is our opinion that a person who expects, without experience, to earn \$25.00 a week in this way is exceedingly optimistic.

Perhaps Getting Rather Than Giving

Can you tell us anything about the North American Inheritance Service of 2742 W. North Ave., Chicago, Illinois? I recently had a letter from them saying that they had been asked to communicate with me in a matter of distinct importance to me.

WE asked the Chicago Better Business Bureau for some information about this concern. They inform us that up until about six months ago this address was used by a Mr. Rich for receiving mail, but for the past six months, mail has been forwarded by the present owner of that address to

another address in New York City. The man who is forwarding this mail from Chicago states that he has absolutely no connection with that firm.

With this information it seems probable to us that the American Inheritance Service may be a scheme for tracing debtors. In other words, such letters are sometimes sent to people believed to owe money in order to get a reply from them and definitely locate them at their address. Certainly we would not recommend that any subscriber take any such news very seriously. A subscriber forwarded to us a letter from the American Inheritance Service which is a form letter run off on a mimeograph. No concern is hunting for a sufficient number of heirs to lost estates to warrant mimeographing letters of this sort.

Almost Caught!

Today a man came to my place representing himself to be a bond salesman for a New York firm. He talked a long time and I finally gave him a check for \$500 for a bond. I told him that he couldn't get it cashed until the next day as I would have to have the money transferred from my interest to my checking account. After he had gone I called up the bank which he gave as a reference and they did not know him, so I telephoned to the bank and stopped payment on the check.

UPON receipt of this letter we got in touch by telephone with the firm mentioned by our subscriber here in New York City. They report that they have no man in their employ in that section and that their orders are al-

ways to have checks made out to themselves rather than to the salesman personally.

It would seem from this that the man was an out and out swindler and our subscriber was mighty fortunate that he became suspicious enough to stop payment on the check. It seems to us that any subscriber is taking a pretty heavy risk when they make out checks of this size to people they know nothing about.

People's Monthly Suspends Publication

WE recently received one or two complaints against the People's Monthly of Des Moines, Iowa. We have just had word from them that publication has been suspended and equipment placed in the hands of a receiver. In case publication is resumed there may be some chance of getting satisfactory adjustment of complaints but until that time comes there is probably little that can be done.

Avoid Sending Cash

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

Fine Service

Dear Sir:

I received a draft of \$27.14 about May 9th from the North American Accident Insurance Co. for injuries received in an auto accident, March 24, 1931.

I wish to thank the American Agriculturist very much for the fine service given me, and will gladly recommend said Insurance Co. to any one who wishes an Accident insurance.

Edith Bickelhaupt,
Vernon, N. Y.

Mrs. Bickelhaupt was injured March 24, 1931 when her automobile ran into a house causing fracture of ribs on left side, bruised left side, eye and leg.

State Police asking that all his men be on the lookout for this car.

If these men or any men selling linoleum call on you our suggestion would be that you do not tell them your suspicions, that you simply refuse to buy, and as soon as they are gone watch what road they take and get in touch with the nearest State Trooper telling him to be on the lookout for them. Remember American Agriculturist offers a standing reward of \$100 for information leading to the arrest, conviction, and imprisonment of any person who attempts to defraud an A. A. subscriber who at the time has an A. A. Service Bureau sign posted.

Be Sure When You Insure

I am writing to ask if you can help me to recover money, \$28.75, I paid to a man giving his name as G. W. Ayers, claiming to represent a kind of auto insurance or protection called, "Anthracite Motor League," with office in Wilkes Barre, or Scranton, Pennsylvania.

IT is a constant source of wonder to us that subscribers will part with this amount of money without sufficient evidence that the company is sound and reliable. We have no information in this office about the Anthracite Motor League but we do know that on several occasions people claiming to represent non-existing companies have gone through the country and collected a lot of money. All too frequently our subscribers believe they are insuring their car against accident when they take out a membership in an automobile service association. We are thoroughly in favor of car insurance, but we urge you to take time to investigate the company to see that that is what you are getting before you invest your money.

Do You Know This Firm?

Do you know or can you locate the Dillbert Publishing Company (no address given) represented by one H. Worden who solicits advertising for a select list of ten room tourist houses, gift shops, etc? He tells that the Standard Oil Company is back of publishing a book of information to be obtained at the Socony Gas Stations and collects \$7.00 from each advertiser to pay for the plate. The book was to have

Making Good Bordeaux Mixture

(Continued from Page 3)

tank full of water. Third, use the Bordeaux while it is fresh; the newer it is the better it will stick. Fourth, if, of necessity, you must allow it to stand for any length of time, add a heaping tablespoonful of common sugar to each hundred gallons of mixture. Fifth, some authorities say that the more lime a mixture has above actual requirements, the less adhesive it becomes. In order to offset or prevent injury to foliage there is a frequent tendency to add an excess of lime, that is, to make the formula 4-5-50 rather than 4-4-50.

Pure copper sulphate in solution will kill the foliage with which it comes in contact. The addition of lime to copper sulphate makes the copper insoluble so that it will not harm foliage; in fact, there is considerable evidence that it actually stimulates plant growth. There is always, however, some danger of damage to foliage. In the first place, the Bordeaux may not be properly made. If you use hydrated lime that has become air slaked you will get damage or, of course, if insufficient lime is added, the foliage will be burned. Certain foliage is more susceptible to damage than others. Most varieties of stone fruits, especially peaches and Japanese plums are sure to be injured by Bordeaux and apple foliage is sometimes damaged under certain weather conditions.

Fortunately, we have one or two tests which can be applied to see whether or not sufficient lime has been added.

One commonly advised is to put the blade of a pocket knife into the mixture leaving it there for at least a minute. If insufficient lime has been added metallic copper will be deposited on the knife blade. Another test is to buy at the drugstore a little potassium ferrocyanide. After the spray is ready to apply put a drop of this into the mixture. If it turns brown or dark red, add more lime. If it stays yellow go ahead.

Care in the little things which go toward making Bordeaux, thus insuring a safe product, followed by application under high pressure so that foliage is thoroughly covered often enough to keep new foliage protected, is the most effective prevention known for a considerable number of fungus diseases. Bordeaux mixture is, of course, not the only fungicide, but for certain crops is an important one.

Under Frozen Stars

(Continued from Page 10)

"You think they'll do as he said—try to drive us out of the country?"

"Eef dey t'ink we got devil wid us, dey might try somet'ing, ah-hah."

"Well, are we going to be driven out by this Jingwak?"

Omar spat into the fire and puffed for a moment before answering. "Esau and Omar tak' good care ov dis Jingwak—nevaire fear dat. But we want de fur dis long snows—so we go easee."

"You're right, Omar, we'll go slow. They're wild and superstitious—these people. They might even ambush us if we don't handle them right. We've got a tough job ahead of us, but it's the only thing that'll save Sunset House—reaching these Indians."

Jim rolled up in his blanket to struggle with the problem which faced him, while the voices of Omar and Esau, smoking by the dying fire, reached his ears in muffled monotone. But desperate as were the present fortunes of Jim Stuart and Sunset House, he shortly found himself back on the sand beach at Mitawangagama, gazing into the dark depths of Aurore LeBlond's changing eyes; watching the sunlight caught in the meshes of her thick hair; listening to her low laugh.

POST YOUR FARM And Keep Trespassers Off

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

Per Dozen\$ 1.00
Per Fifty 3.50
Per Hundred 6.50
Per Thousand 60.00

Specialty worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

To avoid loss of cash in mail, send check or money order with order.
